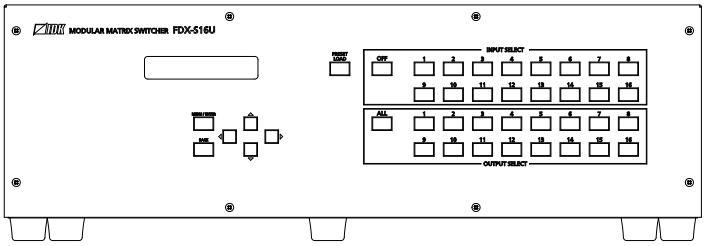
Modular Matrix Switcher

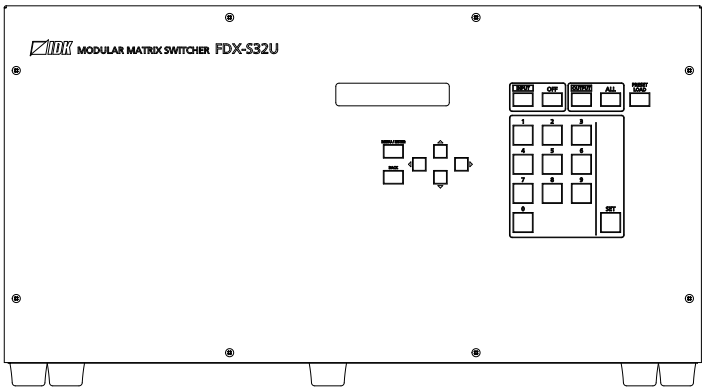
FDX-S Series

FDX-S08U/S16U/S32U
FDX-S08/S16/S32/S64

<User Guide>

Ver.4.1.0





- Thank you for choosing our product.
- To ensure the best performance of this product, please read this user guide fully and carefully before using it and keep this manual together with the product for future reference as needed.

IDK Corporation

Trademarks

- Audinate®, the Audinate logo and Dante are trademarks of Audinate Pty Ltd.
- Blu-ray Disc and Blu-ray are trademarks of Blu-ray Disc Association.
- ETHERNET is a registered trademark of Fuji Xerox Co., Ltd.
- Javascript® is a trademark or registered trademark of Oracle Corporation, its subsidiaries, and affiliated companies in the United States and other countries.
- HDBaseT™ and the HDBaseT Alliance Logo are trademarks of the HDBaseT Alliance.
- The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing Administrator, Inc. in the United States and other countries.
- Windows is either registered trademark or trademark of the Microsoft Corporation in the United States and other countries.
- Oracle and Java are trademarks of Oracle Corporation its subsidiaries, and affiliated companies in the United States and other countries.
- The terms Anti-snow and Connection Reset are registered trademarks of IDK Corporation in Japan.
- All other company and product names mentioned in this manual are either registered trademarks or trademarks of their respective owners. In this manual, the “®” or “™” marks may not be specified.

Before reading this manual

- All rights reserved.

- Some information contained in this user guide such as exact product appearance, diagrams, menu operations, and so on may differ depending on the product version.
- This user guide is subject to change without notice. You can download the latest version from IDK's website at: www.idkav.com

The reference manual consists of the following two volumes:

- User guide (this document):
  Provides explanations and procedures for operations, installation, connections among devices, I/O adjustment and settings.
- Command guide: Please download the command guide from the website above.
  Provides explanations and procedures for external control using RS-232C and LAN communications.

FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

CE MARKING

This equipment complies with the essential requirements of the relevant European health, safety and environmental protection legislation.

WEEE MARKING

Waste Electrical and Electronic Equipment (WEEE), Directive 2002/96/EC
(This directive is only valid in the EU.)
This equipment complies with the WEEE Directive (2002/96/EC) marking requirement. The left marking indicates that you must not discard this electrical/electronic equipment in domestic household waste.

Safety Instructions

Read and understand all safety and operating instructions before using this product. Follow all instructions and heed all warnings/cautions.

Enforcement Symbol	Description
Warning	Indicates the presence of a hazard that may result in death or serious personal injury if the warning is ignored or the product is handled incorrectly.
Caution	Indicates the presence of a hazard that may cause minor personal injury or property damage if the caution is ignored or the product is handled incorrectly.

Symbol	Description	Example
Caution	This symbol is intended to alert the user. (Warning and caution)	**Hot surfaces Caution**
Prohibited	This symbol is intended to prohibit the user from specified actions.	**Do not disassemble**
Instruction	This symbol is intended to instruct the user.	**Unplug**

⚠Warning

■ For lifting heavy products:

Instruction	**● Lifting must be done by two or more personnel.** To avoid injury: When lifting the product, bend your knees, keep your back straight and get close to it with two or more persons.

■ For installing and connecting products:

Prohibited	**● Do not place the product upon a surface that may give way or that may become unstable.** Install the product in a secure and stable place to prevent it from falling and possibly causing injury. **● Secure the product if installing in locations prone to vibration or movement.** Otherwise, it may move unexpectedly or it may fall and lead to injury.
Instruction	**● Installation work must be performed by professionals.** The product is intended to be installed by skilled technicians. For installation, please contact a system integrator or IDK. Improper installation may lead to the risk of fire, electric shock, injury, or property damage. **● Insert the power plug into an outlet that is unobstructed.** Unobstructed access to the plug enables unplugging the product in case of any extraordinary failure, abnormal situation or for easy disconnection during extended periods of non-use. **● Insert the power plug into an appropriate outlet completely.** If the plug is partially inserted, arching may cause the connection to overheat, increasing the risk of electrical shock or fire. Do not use a damaged plug or connect to a damaged outlet. **● Unplug the product from the AC power source during installation or service.** When connecting peripheral devices to this product, unplug all involved devices from outlets. Ground potential differences may cause fire or other difficulties.

■ For operating products:

Prohibited	**● Keep out any foreign objects.** To avoid fire or electric shock, do not permit foreign objects, such as metal and paper, to enter the product from vent holes or other apertures. **● For power cable/plug:** **・Do not scratch, heat, or modify, including splicing or lengthening them.** **・Do not pull, place heavy objects on them, or pinch them.** **・Do not bend, twist, tie or clamp them together forcefully.** Misuse of the power cable and plug may cause fire or electric shock. If power cables/plugs become damaged, contact your IDK representative.
Do not disassemble	**● Do not repair, modify or disassemble.** Since the product includes circuitry that uses potentially lethal, high voltage levels, disassembly by unauthorized personnel may lead to the risk of fire or electric shock. For internal inspection or repair, contact your IDK representative.
Do not touch	**● Do not touch the product and connected cables during electrical storms.** Contact may cause electric shock.
Instruction	**● Clean the power plug regularly.** If the plug is covered in dust, it may increase the risk of firer. **● The product must be earthed.** To reduce the risk of electrical shock, ensure the product is connected to a mains socket outlet with a protective earthing connection.

■ If the following problem occurs:

Unplug	**● Unplug immediately if the product smokes, makes unusual noise, or produces a burning odor.** If you continue to use the product under these conditions, it may cause electric shock or fire. **● Unplug immediately if the product is damaged by falling or having been dropped.** If you continue to use the product under these conditions, it may increase the risk of electrical shock or fire. For maintenance and repair, contact your IDK representative. **● Unplug immediately if water or other objects are directed inside.** If you continue to use the product under these conditions, it may increase the risk of electrical shock or fire. For maintenance and repair, contact your IDK representative.

⚠Caution

■ For installing and connecting products:

Prohibited	**● Do not place the product in a location where it will be subjected to high temperatures.** If the product is subjected to direct sunlight or high temperatures while under operation, it may affect the product's performance and reliability and may increase the risk of fire. **● Do not store or operate the product in dusty, oil smoke filled, or humid place.** If the product is placed near humidifiers or in a dusty area, it may increase the risk of fire or electric shock. **● Do not block the vent holes.** If ventilation slots are blocked, it may cause the product to overheat, affecting performance and reliability and may increase the risk of fire. **● Do not place or stack heavy items on the product.** Failure to observe this precaution may result in damage to the product and other property and may lead to the risk of personal injury. **● Do not exceed ratings of outlet and wiring devices.** Exceeding the rating of an outlet may increase the risk of fire and electric shock.
No wet hands	**● Do not handle power plug with wet hands.** Failure to observe this precaution may increase the risk of electrical shock.
Instruction	**● Use and store the product within the specified temperature/humidity range.** If the product is used outside the specified range for temperature and humidity continuously, it may increase the risk of fire or electric shock. **● Do not place the product at elevations of 1.24 mi. (2,000 m) or higher above sea level.** Failure to do so may shorten the life of the internal parts and result in malfunctions. **● When mounting the product into the rack, provide sufficient cooling space.** Mount the product in a rack meeting EIA standards, and maintain spaces above and below for air circulation. For your safety as required, attach an L-shaped bracket in addition to the panel mount bracket kit to improve mechanical stability. **● Never insert screws without the rubber feet into the threaded holes on the bottom of the product.** Never insert screws without the rubber feet into the threaded holes on the bottom of the product. Doing so may lead to damage when the screws contact electrical circuitry or components inside the product. Reinstall the originally supplied rubber feet using only the originally supplied screws.

■ For operating products:

 Hot surfaces Caution	**For products with the hot surfaces caution label only:** **● Do not touch the product's hot surface.** If the product is installed without enough space, it may cause failures of other products operation. If you touch product's hot surface, it may cause burn.
 Prohibited	**● Use only the supplied power cable and AC adapter.** **● Do not use the supplied power cable and AC adapter with other products.** If non-compliant adapter or power cables are used, it may increase the risk of fire or electrical shock.
 Unplug	**● If the product won't be used for an extended period of time, unplug it.** Failure to observe this precaution may increase the risk of fire. **● Unplug the product before cleaning.** To prevent electric shock.
 Instruction	**● If cooling fan stops, power off the product and contact us.** Failure to do so may rise internal temperature and increase the risk of malfunction, fire, or electric shock. **● Keep vents clear of dust.** If the vent holes near the cooling fan or near the fan are covered with dust, internal temperature rises and it may increase the risk of malfunction. Clean the vent holes and near the fan as needed. If dust accumulates inside of the product, it may increase the risk of malfunction, fire, or electric shock. Periodic internal cleaning, especially before humid rainy season, is recommended. For internal cleaning, contact your IDK representative.

1 About this Guide

This guide contains installation, setting, and operating information for the FDX-S series Modular Matrix Switchers (hereafter referred to as “FDX-S”).

The FDX-S consists of the modular matrix switcher, redundant power supply unit, Input/Output boards, and audio boards.

[Table 1.1] FDX-S series

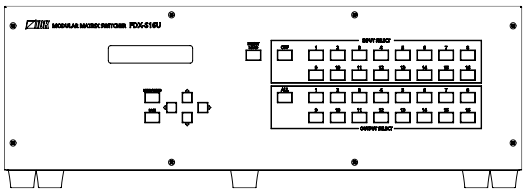
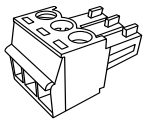
2 Included items

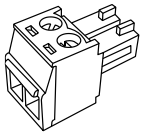
Ensure that all items illustrated below are included in the package.
If any items are missing or damaged, please contact IDK.



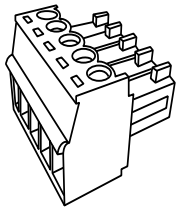
One (1) frame (Example: FDX-S16U)



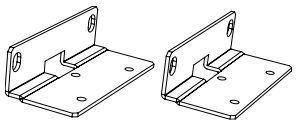
3-pin captive screw connector



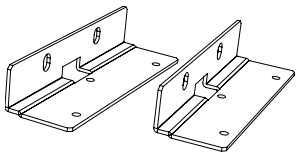
2-pin captive screw connector



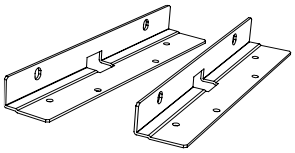
5-pin captive screw connector



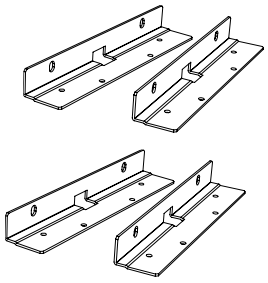
Rack mounting brackets
(For FDX-S08U/S08)



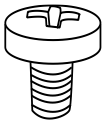
Rack mounting brackets
(For FDX-S16U/S16)



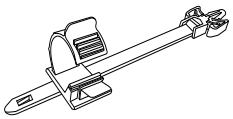
Rack mounting brackets
(For FDX-S32U/S32)



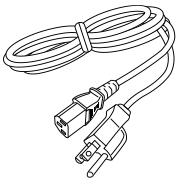
Rack mounting brackets
(For FDX-S64)



M4 screw



Cable clamp



One (1) power cord, 6 ft. (1.8 m)

[Table 2.1] Included items

Item	FDX				
	S08U/S16U	S32U	S08/S16	S32	S64
Frame	1	1	1	1	1
3-pin captive screw connector for RS-232C	1	1	1	1	1
2-pin captive screw connector for ALARM	1	1	1	1	1
3-pin/5-pin captive screw connectors for analog audio	Depends on the number of analog audio connectors				
Rack mounting brackets/ M4 screw	Two (2) brackets/ 6 screws	Two (2) brackets/ 8 screws	Two (2) brackets/ 6 screws	Two (2) brackets/ 8 screws	Four (4) brackets/ 16 screws
Cable clamp for I/O boards	Depends on the number of HDMI connectors				
Power cord, 6 ft. (1.8 m) for frame	1	1	1	1	1
Power cord, 6 ft. (1.8 m) for redundant power supply unit	1	1	1	1	1

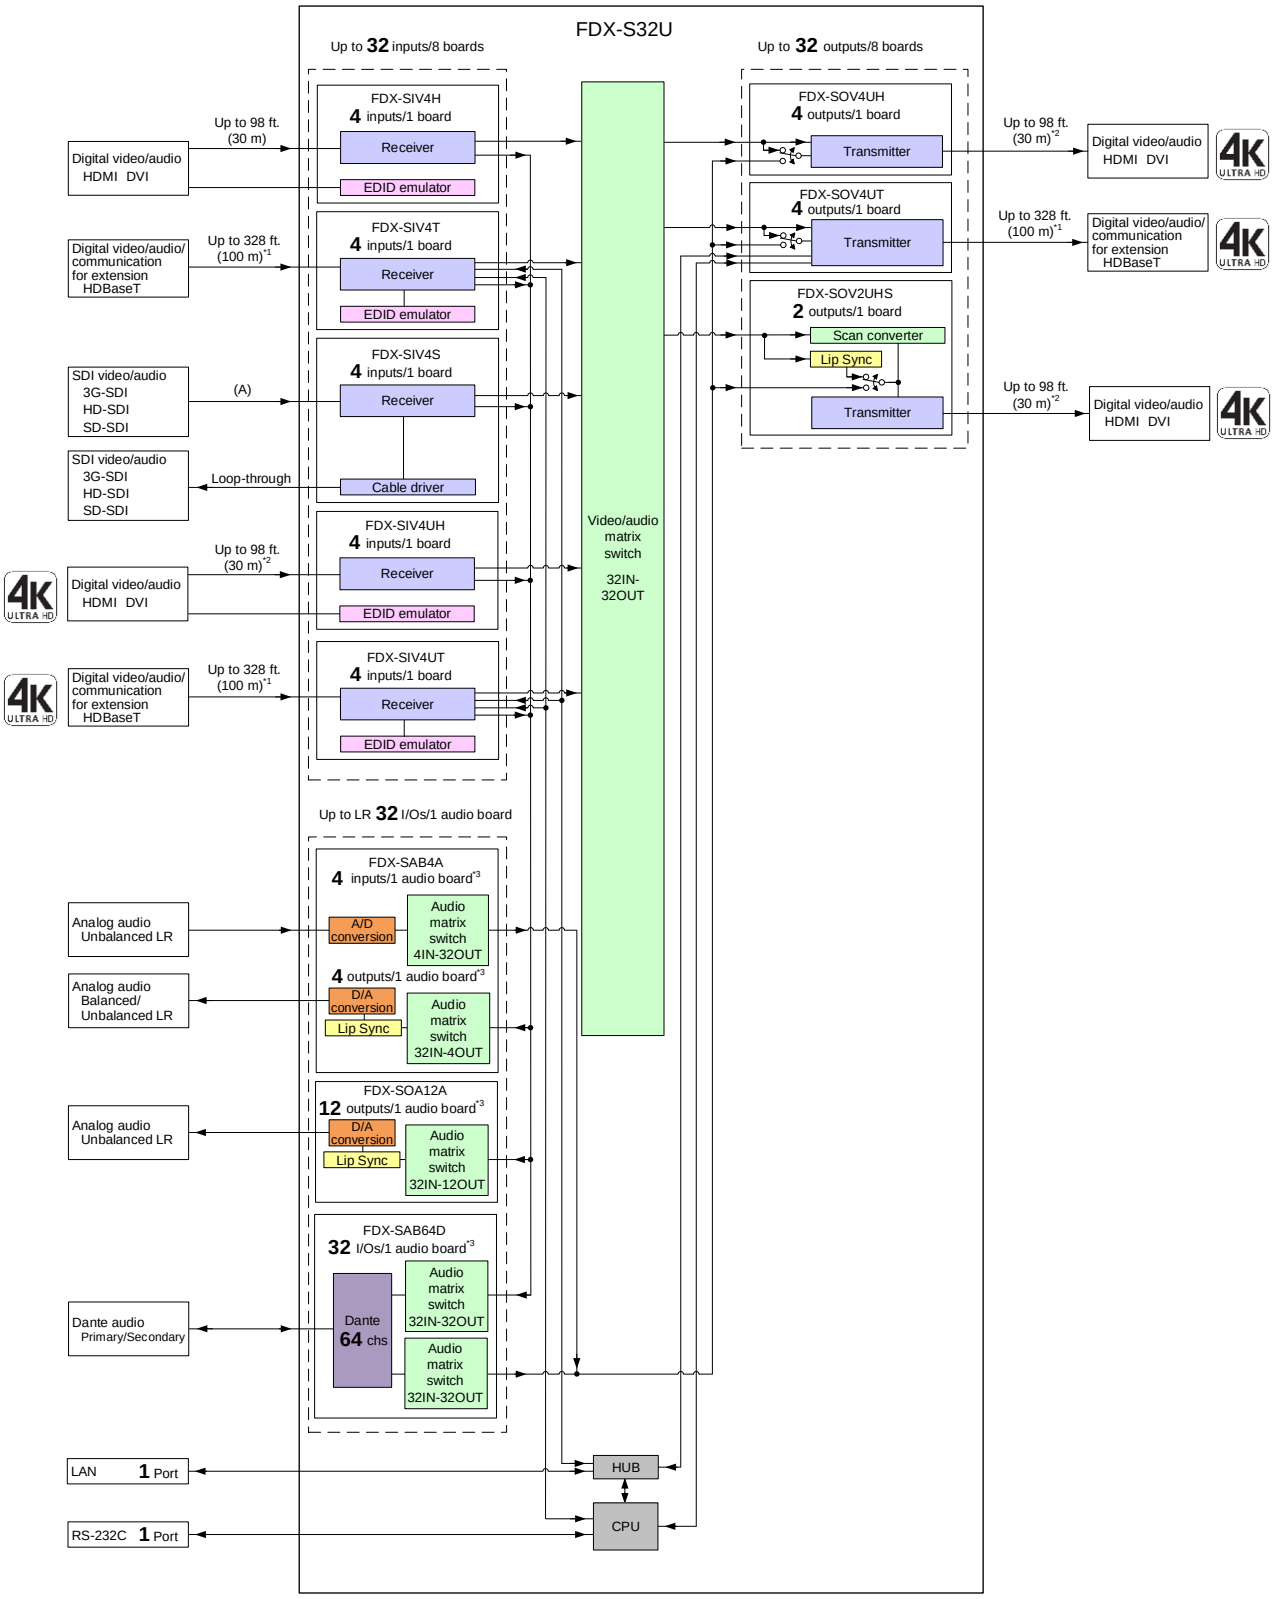
3 About FDX-S Module Matrix Switchers

The FDX-S is an HDCP-compliant modular digital matrix switcher that supports resolutions up to 4K@60. It provides up to 64 inputs and 64 outputs. Video and embedded audio can be switched simultaneously.

With audio boards, input digital audio signals can be converted into output analog audio or Dante network audio signals. Input analog audio signals and Dante network audio signals can be converted into digital audio signals and embedded to desired output video channels.

The FDX-S features RS-232C/LAN ports for remote control, redundant power supply, and system check that outputs an alarm in case an abnormality is detected in power supply voltage, fans, internal temperature, board, or audio board.

The redundant power supply ensures constant availability and minimizes the chance of a failure even for mission-critical environments.



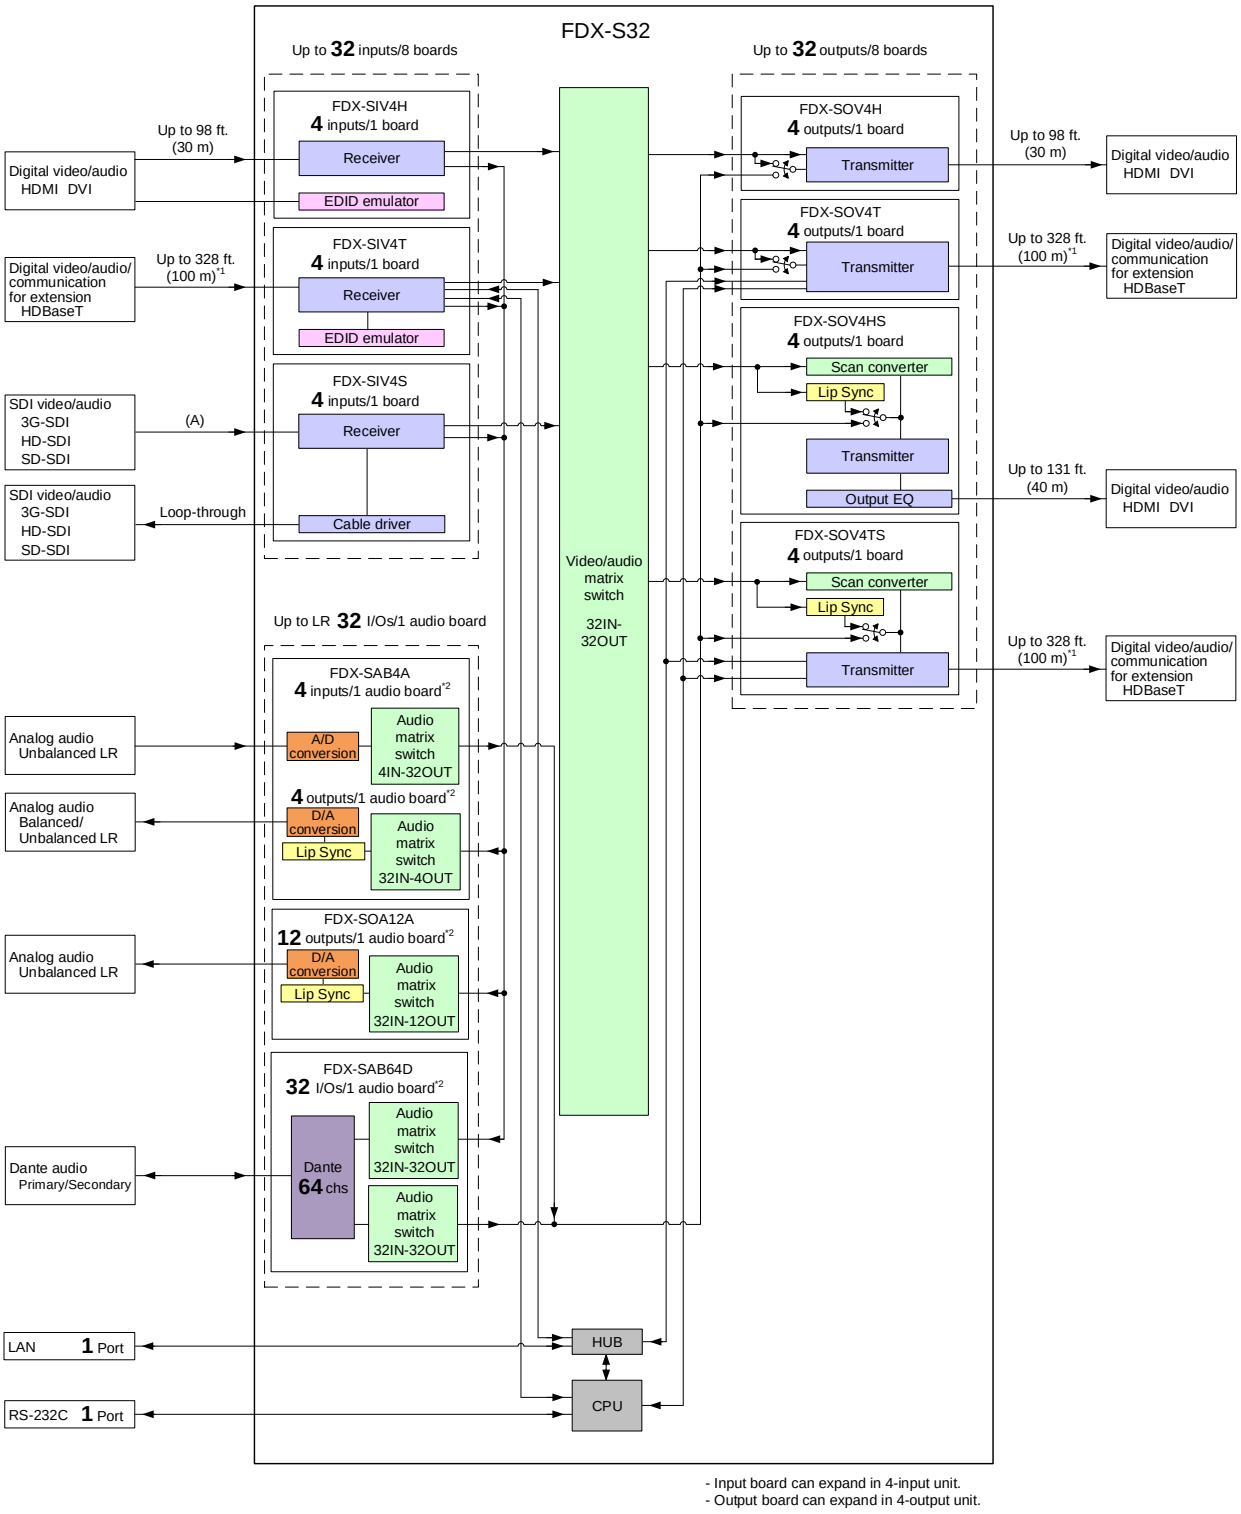
(A) SD-SDI : Up to 1312 ft. (400 m)/
HD-SDI : Up to 787 ft. (240 m)/
3G-SDI : Up to 459 ft. (140 m)
over 1694A (BELDEN RG-6) cable

*1 Up to 328 ft. (100 m) : 4K@60 (FDX-SIV4UT/FDX-SOV4UT)
4K@30 (FDX-SIV4T)
Up to 492 ft. (150 m) : 1080p (24bit) in Long reach mode
For long reach mode, video signals up to 1080p (24 bit) can be transmitted to 492 ft. (150 m) at maximum if using with IDK's HDBaseT products supporting 328 ft. (100 m) transmission.

*2 Up to 98 ft. (30 m): 1080p@60
Up to 39 ft. (12m) : 4K@60 (when cable supporting 18 Gbps transmission is used)

*3 The number of inputs/outputs: the number of stereo L/R audio signal channels

[Fig. 3.1] Diagram (Example: FDX-S32U)



(A) SD-SDI : Up to 1312 ft. (400 m)/
HD-SDI : Up to 787 ft. (240 m)/
3G-SDI : Up to 459 ft. (140 m)
over 1694A (BELDEN RG-6) cable

*1 Up to 328 ft. (100 m) : 4K@30 (FDX-SIV4T/FDX-SOV4T)
QWXGA, 1080p (FDX-SOV4TS)
Up to 492 ft. (150 m) : 1080p (24bit) in Long reach mode
For long reach mode, video signals up to 1080p (24 bit) can be transmitted to 492 ft. (150 m) at maximum if using with IDK's HDBaseT products supporting 328 ft. (100 m) transmission.

*2 The number of inputs/outputs: the number of stereo L/R audio signal channels

[Fig. 3.2] Diagram (Example: FDX-S32)

5.3 Audio board

Only one audio board can be installed, but up to two audio boards can be installed to the FDX-S64.

[Table 5.6] Audio boards for FDX-S

P/N	Input/ Output	Description	Drawings
FDX-SAB4A	Input	4-input analog audio Unbalanced Stereo LR		Output	4-output analog audio Balanced/Unbalanced Stereo LR	
FDX-SOA12A	Output	12-output analog audio Unbalanced Stereo LR	FDX-SAB64D	Input	1-input network audio 64 Dante* channels (32 stereo channels)	
	Output	1-input network audio 64 Dante* channels (32 stereo channels)	

*See "**9.4 Dante**" for details of Dante.

5.4 Redundant power supply unit

■ **Redundant power supply units**

[Table 5.7] Redundant power supply units

P/N	For	Drawing
FDX-SRP08	FDX-S08U/S08	FDX-SRP16	FDX-S16U/S16	
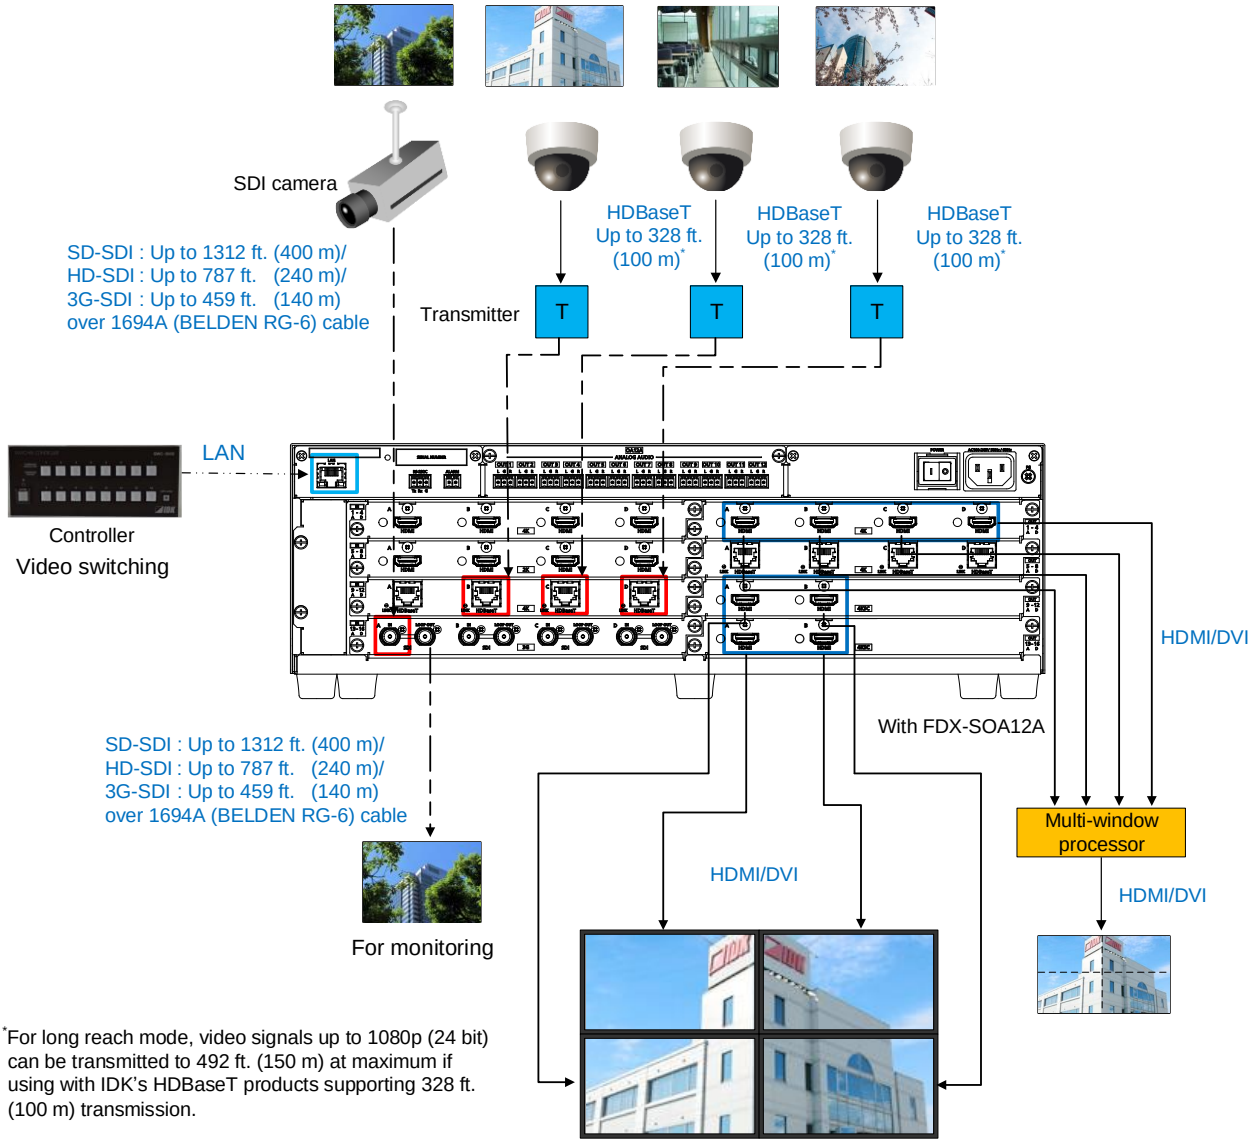
FDX-SRP32	FDX-S32U/S32	
FDX-SRP64	FDX-S64	
6 System Configuration Example



*For long reach mode, video signals up to 1080p (24 bit) can be transmitted to 492 ft. (150 m) at maximum if using with IDK's HDBaseT products supporting 328 ft. (100 m) transmission.

[Fig. 6.1] System configuration example (Example: FDX-S16U)

7 Installation

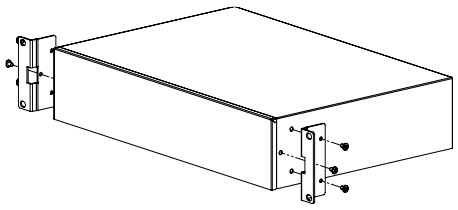
7.1 Precautions

When installing the FDX-S, observe the following precautions; otherwise, the internal temperature increases and it may affect the product lifetime and operation.

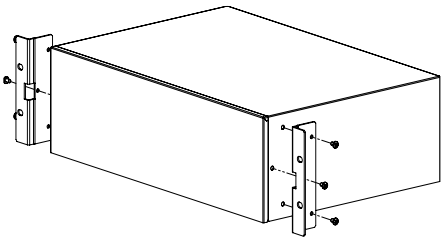
- Do not stack or place one FDX-S directly on top of another FDX-S.
- Do not block vent holes.
- To provide adequate ventilation, maintain sufficient clearances around the FDX-S (1.2 in. (30 mm) or more).
- Consider installing the FDX-S in an environment compatible with the maximum temperature indicated in the specification sheet 32°F to 104°F (0°C to +40°C).

7.2 Rack mounting brackets

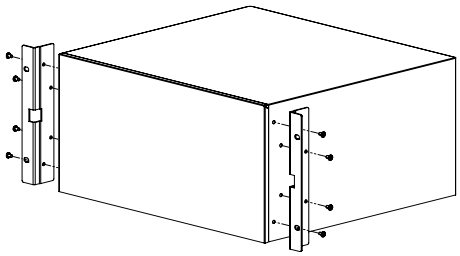
Attach the rack mounting brackets to the FDX-S chassis using the supplied M4 screws.



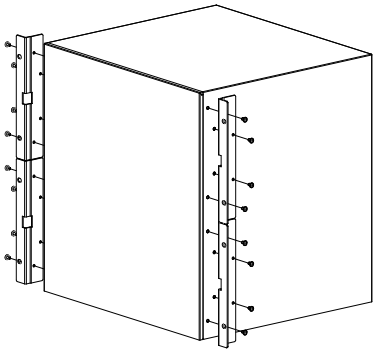
For FDX-S08U/S08



For FDX-S16U/S16



For FDX-S32U/S32



For FDX-S64

[Fig. 7.1] Attaching rack mounting brackets

Note:
The standard screw tightening torque is 1.47 N·m (about 15.0 kgf·cm).

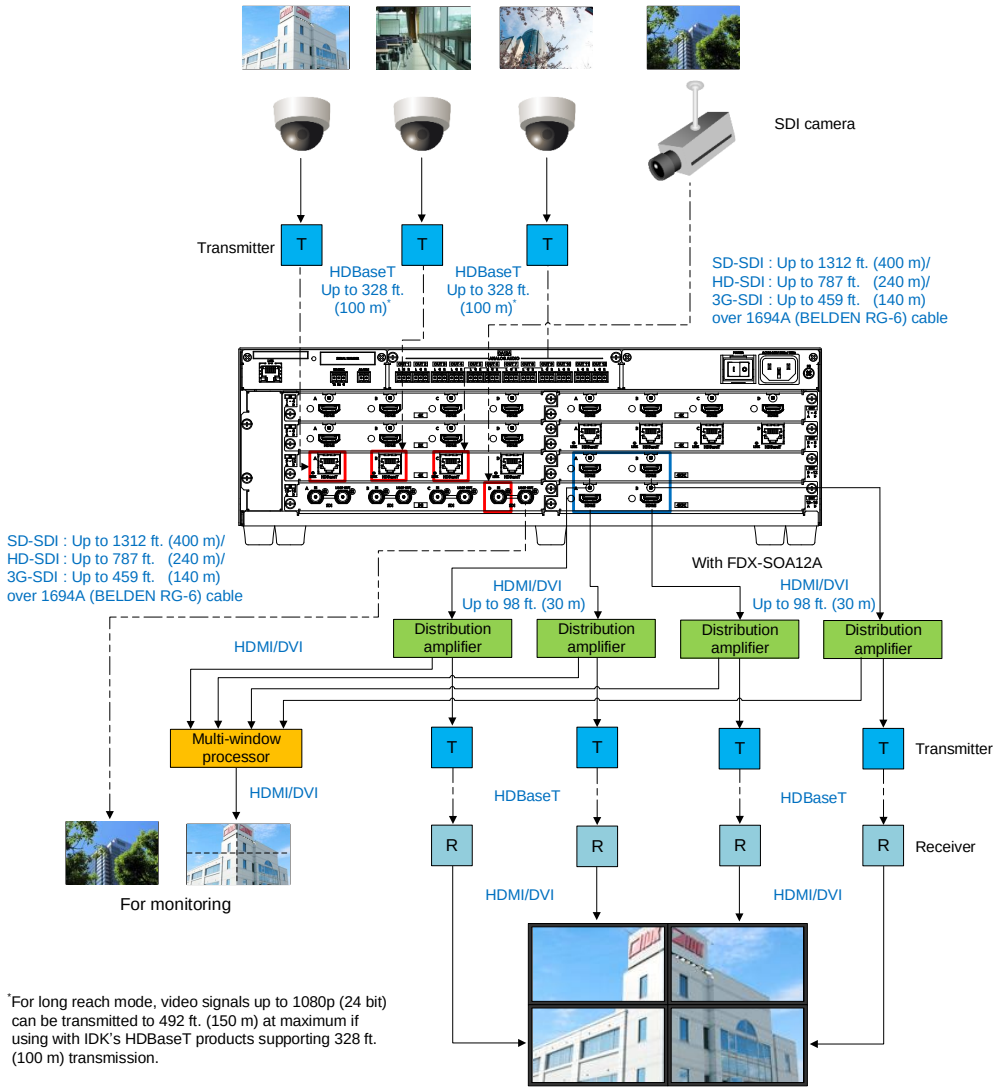
8 Connection Details

8.1 Precautions

When connecting the FDX-S to external devices, observe the following precautions.

- Read manuals for the external devices.
- Before connecting cables to the FDX-S or an external device, dissipate static electricity by touching grounded metal such as equipment racks before handling signal cables. Failure to observe this precaution may result in ESD (electrostatic discharge) damage.
- Power all units off before connecting cables.
- Be sure to fully seat all plugs and connections and dress cables to reduce stress on connectors.

8.2 Connecting video devices



[Fig. 8.1] Connecting video devices (Example: FDX-S16U)

8.2.1 HDMI cable

When the video is 4K format, the maximum TMDS data rate (transmission speed) is 18 Gbps. If a high-speed HDMI cable is used, the maximum TMDS data rate of 10.2 Gbps can be transferred, and the video cannot be displayed stably.
Please select an 18 Gbps high-speed cable depending on the 4K format. The maximum transmission distance depends on the cable type, source and sink devices. You are recommended to use high quality cables.

[Table 8.1] 18 Gbps high-speed cable for 4 K format

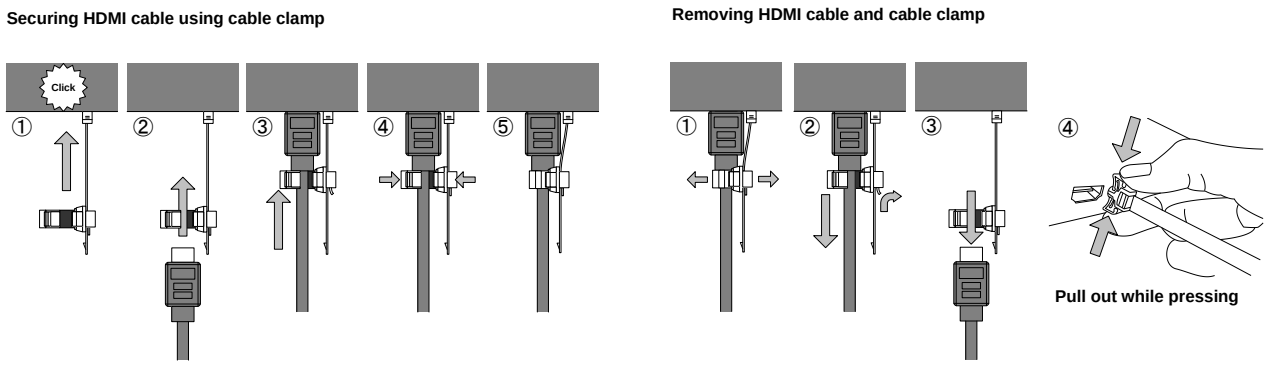
	TMDS data rate (Gbps)								
	RGB, YCbCr 4:4:4			YCbCr 4:2:2			YCbCr 4:2:0		
4K format	24 bit	30 bit	36 bit	24 bit	30 bit	36 bit	24 bit	30 bit	36 bit
3840x2160p (24/25/30)	10.2 Gbps	18 Gbps	18 Gbps	10.2 Gbps	10.2 Gbps	10.2 Gbps	N/A	N/A	N/A
4096x2160 (24/25/30)	10.2 Gbps	18 Gbps	18 Gbps	10.2 Gbps	10.2 Gbps	10.2 Gbps	N/A	N/A	N/A
3840x2160p (50/59.94/60)	18 Gbps	N/A	N/A	18 Gbps	18 Gbps	18 Gbps	10.2 Gbps	18 Gbps	18 Gbps
4096x2160 (50/59.94/60)	18 Gbps	N/A	N/A	18 Gbps	18 Gbps	18 Gbps	10.2 Gbps	18 Gbps	18 Gbps

18 Gbps: 18 Gbps high-speed cable; 10.2 Gbps: 10.2 Gbps cable

Note:
If a cable is extended and a cable joint (JJ) is used, video may be interrupted or may not be output.

8.2.2 Securing HDMI cable

Secure HDMI cables using cable clamps to prevent connectors from being accidently pulled out of ports.



[Fig. 8.2] Securing and removing cable clamp

8.2.3 HDBaseT input and output connectors

Both HDBaseT input and output connector support long reach mode.
With long reach mode, video signals up to 1080p (24 bit) can be transmitted to 492 ft. (150 m) at maximum if using with IDK's HDBaseT products supporting 328 ft. (100 m) transmission.

Enable the HDBaseT Long reach mode from following menus:

For HDBaseT input

- 10.7.3 HDBaseT input long reach mode
- 10.12.1 Resolution
- 10.12.6 Deep Color

For HDBaseT output

- 10.4.1 Output resolution
- 10.5.6 HDBaseT output long reach mode
- 10.5.7 Deep Color output

8.2.4 Category cable

To ensure the best performance with category cables, select a high quality category cable type, ensuring that proper pinning and pairing requirements are observed.

- Cat5e UTP/STP and Cat6 UTP/STP can be used, but we recommend CAT.5E HDC cable* for optimal performance.
- If using STP cables, connect the FG connector to a local electrical ground bonding point. Without bonding FG to ground, the shielding feature may not effectively eliminate interference. If using UTP cables, it is still recommended that the FG connector be used.
- The STP cables are less affected by interference or external noise than UTP cables.
- Connectors for long-haul transmission are the same as that of eight-core modular connector used for Ethernet, but the transmission system is not the same so that it cannot be connected to Ethernet.
- The maximum transmission distance of a category cables is the shorter distance of the maximum transmission distances of transmitter/receiver/sink device connected to the FDX-S.
- Pin assignments: T568A or T568B straight
- Do not pull the cable using excessive force.
- Do not bend the cable at a sharp angle. Keep the bend radius four times of the cable diameter or larger.
- Do not clamp or tie the cable tightly; leave some space allowing the cable to move slightly.
- If you use multiple category cables, keep a distance between the cables or not to place the cables closely in parallel.
- Keep the category cable running as straight as possible. Looping or coiling the cable, causes it to be more easily affected by noise; especially when using longer cable run lengths.
- Do not place the cable in an electrically noisy environment, since high-speed impulsive noise may couple into the category cable. Use of a high-output radio transmission device near the FDX -S or remote receivers may interfere with or interrupt video and or audio signals.
- If the total transmission distance from the transmitter to receiver is 328 ft. (100 m) or less, up to two cable interconnection points can be used. Cable joint supporting Cat6A (10GBase-T) are recommended. For high resolution, such as 4K, video transmission distance may be shortened by about 10%.
- The table below shows supported transmission distance for each category.
  If signals are transmitted for a long haul or with noised from other devices, use a broadband cable or cable having high shielding performance.
  Note that specified distances may shorten depending on the conditions within the actual environment.

[Table 8.2] Transmission distance

Noise influence	Category		Transmission distance	TMDS clock	Recommended cable
Easily affected	UTP	Cat5e	164 ft. (50 m)	≦ 225 MHz	For 164 ft. (50 m) or longer: CAT.5E HDC, Cat5e STP, and Cat6 UTP/STP cables
		Cat6	328 ft. (100 m)		
			230 ft. (70 m)	> 225 MHz (4K format)	For 4K format 230 ft. (70 m) or longer: CAT.5E HDC, Cat5e STP, and Cat6 STP cables
Easily affected	STP	Cat5e* Cat6	328 ft. (100 m)		
			492 ft. (150 m)	Long reach mode ≦ 148 MHz (1080p (24 bit) or less)	CAT.5E HDC, Cat5e STP, and Cat6 STP cables

* The CAT.5E HDC cable is a double-shielded category cable optimized for video signal transmission. The double-shielded structure protects the video signal from external interference. It supports 500 MHz bandwidth at distances up to 328 ft. (100 m).

8.2.5 Coaxial cable

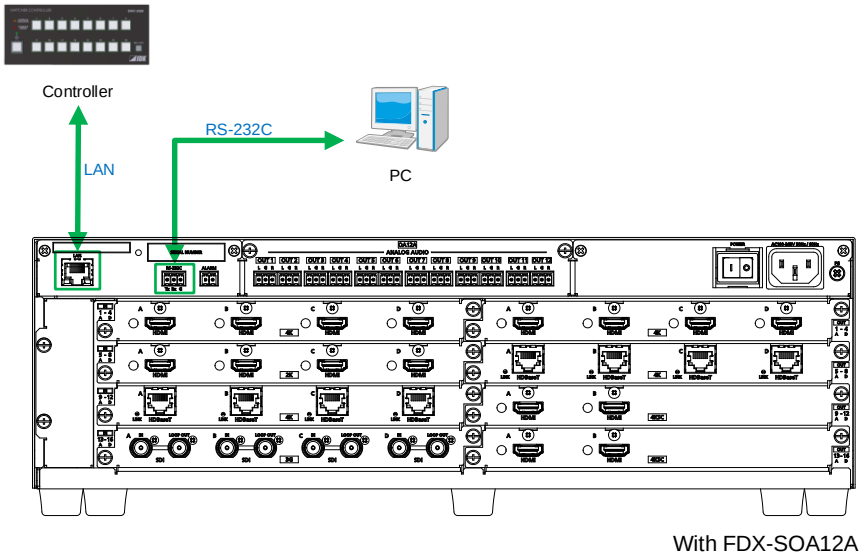
Select the appropriate coaxial cable by referring to the following table.

[Table 8.3] Maximum transmission distances when using BELDEN cable

SDI type	Cable	Max. transmission distances
3G-SDI	1505A (BELDEN RG-59)	394 ft. (120 m)
	1694A (BELDEN RG-6)	459 ft. (140 m)
HD-SDI	1505A (BELDEN RG-59)	656 ft. (200 m)
	1694A (BELDEN RG-6)	787 ft. (240 m)
SD-SDI	1505A (BELDEN RG-59)	1083 ft. (330 m)
	1694A (BELDEN RG-6)	1312 ft. (400 m)

Note:
Maximum transmission distance depends on the characteristics of each source device and quality of each cable.

8.3 Connecting control devices



[Fig. 8.3] Application example for control devices (Example: FDX-S16U)

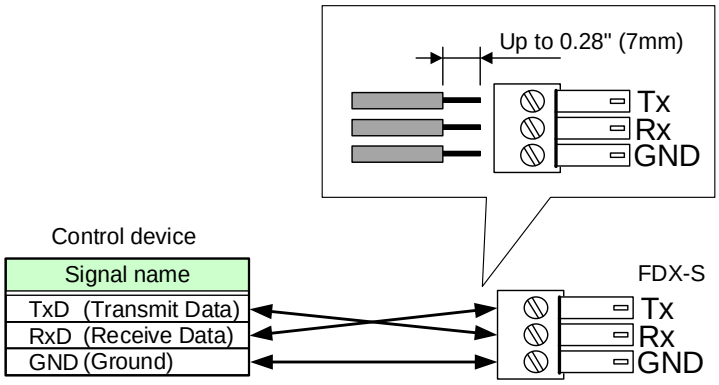
8.3.1 RS-232C communication

Set RS-232C communication in "**10.13.1 RS-232C communication**".

Since the FDX-S supports RS-232C transmission from HDBaseT I/O boards, source and sink devices that are connected to FDX-S HDBaseT I/O connectors via HDC series can be controlled.

■ **Connecting RS-232C cable**

The FDX-S's RS-232C connection is supported by a 3-pin captive screw connector.
Insert and secure the wires from the RS-232C cable into the supplied 3-pin captive screw connector, and then insert the captive screw connector into the mating connector on the FDX-S.
28 AWG to 16 AWG conductor gauge is recommended.
The recommended wire strip length is 0.28 in. (7 mm).
Short RTS/CTS and DTR/DSR as needed.



[Fig. 8.4] Connecting RS-232C cable to 3-pin captive screw connector

8.3.2 LAN communication

The FDX-S includes the function that is equivalent to those of switching hub. It enables LAN communication between the LAN connectors of the FDX-S and the HDC series that are connected to the HDBaseT I/O connector.

【See: 10.14.5 HDBaseT Output LAN】
【See: 10.14.6 HDBaseT Input LAN】

Note:

LAN loop problem

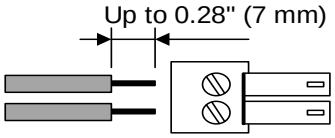
If HDBaseT I/O connector LAN function is enabled and products including a switching hub is connected to FDX-S HDBaseT connectors, the network may be down due to loop problem. In case the loop problem occurs, check the LAN setting an LAN connection.

■ DHCP

The FDX-S does not support automatic acquisition of IP address using DHCP (Dynamic Host Configuration Protocol).

8.3.3 Alarm

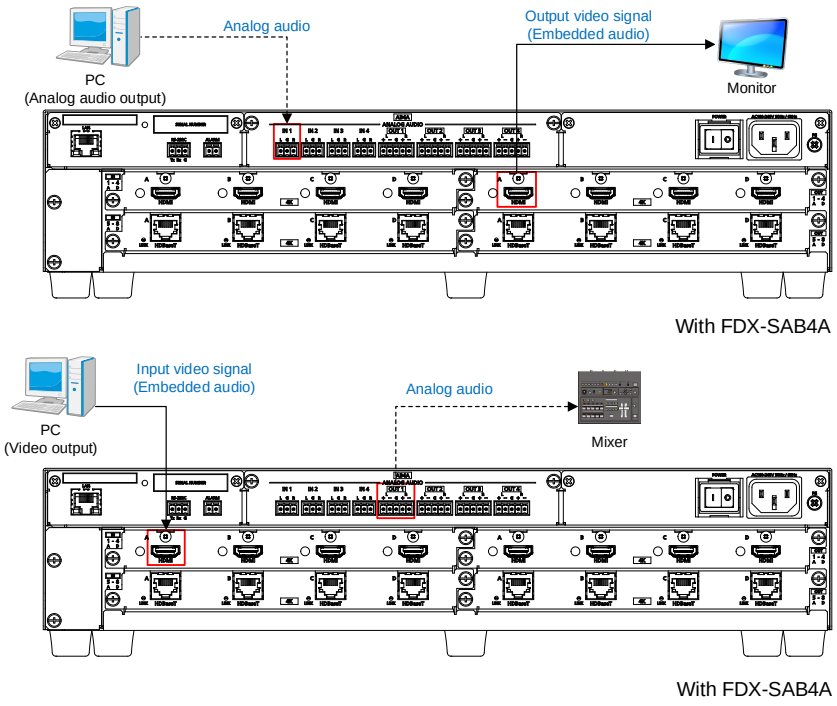
Connect the provided 2-pin captive screw connector to the “ALARM” connector in order to detect problems in the power supply voltage, cooling fans, internal temperature, board, and audio board.
28 AWG to 16 AWG conductor gauge is recommended.
The recommended wire strip length is 0.28 in. (7 mm).



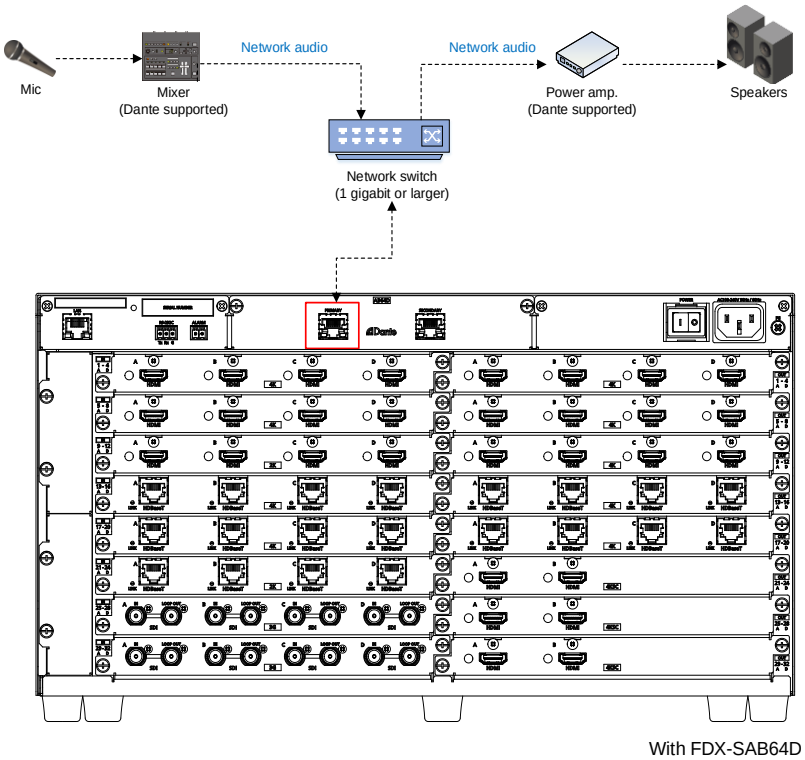
[Fig. 8.5] Connecting cable to 2-pin captive screw connector

8.4 Connecting audio devices

See “**9.4 Dante**” for details of Dante network connection.



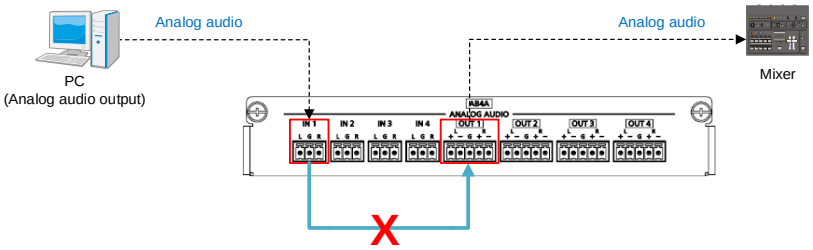
[Fig. 8.6] Connecting audio devices (Example: Installing FDX-SAB4A to FDX-S08U)



[Fig. 8.7] Connecting audio devices (Example: Installing FDX-SAB64D to FDX-S32U)

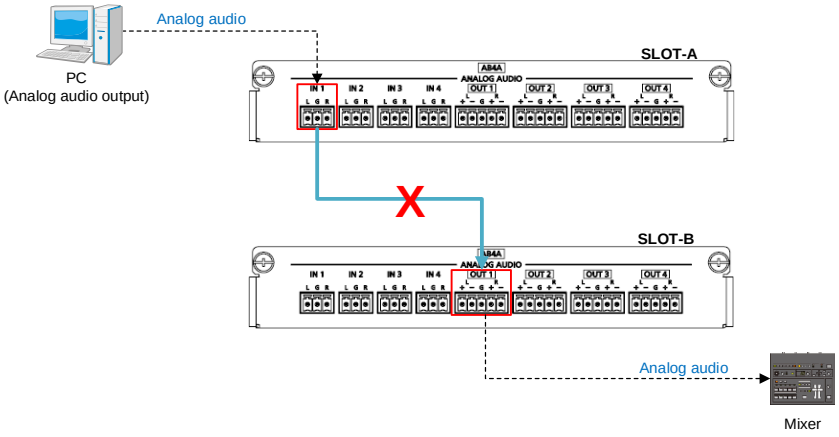
Note:

Audio cannot be transmitted from input to output in an audio board.



[Fig. 8.8] Audio cannot be transmitted from input to output in an audio board

Two audio boards can be installed to the FDX-S64, but audio cannot be transmitted between an audio boards.

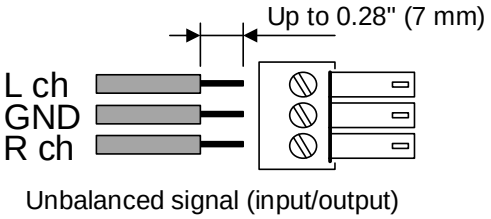


[Fig. 8.9] Audio cannot be transmitted between an audio boards

8.4.1 Analog audio connector

Connect the supplied 3-pin/5-pin captive screw connector to the FDX-S.
3-pin captive screw connector supports unbalanced signal.
5-pin captive screw connector supports both balanced and unbalanced signal.
28 AWG to 16 AWG conductor gauge and a strip length of 0.28 in. (7 mm) are recommended.

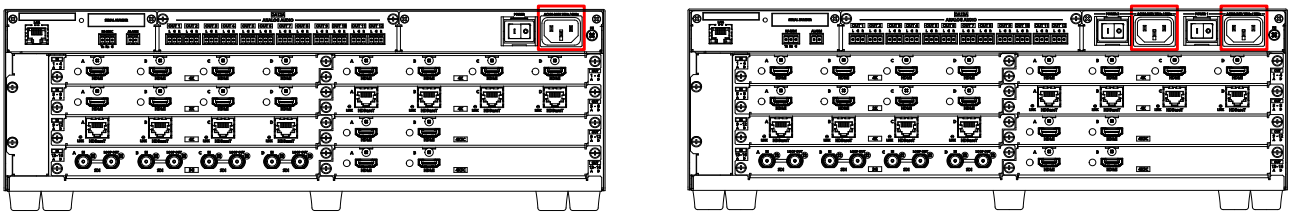
[Fig. 8.10] Connecting audio cable to 5-pin captive screw connector



[Fig. 8.11] Connecting audio cable to 3-pin captive screw connector

8.5 Connecting power cord

For redundant power supply, connect power cords to “POWER 1” and “POWER 2”.



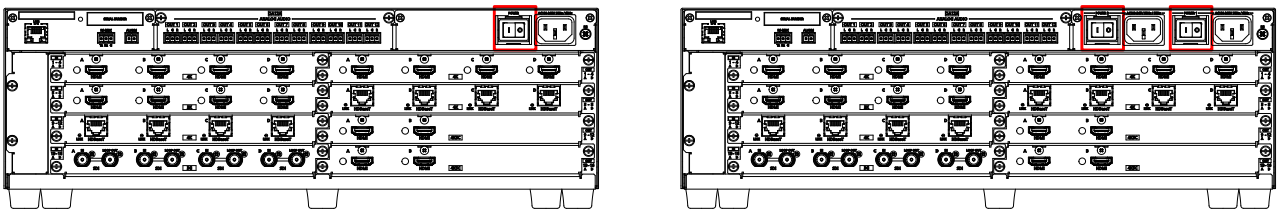
[Fig. 8.12] Connecting power cord

9 Operation

9.1 Powering on/off

Turn on the “POWER” switch of the rear panel to power on the FDX-S.
For rebooting the FDX-S, turn on the switch three seconds or longer after the FDX-S is powered off.

For redundant power supply unit, turn on one of “POWER 1” and “POWER 2” switches and then turn on the other switch within five seconds. If turning on the other switch after six seconds past, it is detected as an alarm and the front display flashes. To stop the alarm, power on both of “POWER 1” and “POWER 2” switches.
To shut down the FDX-S, turn off both switches within five seconds.



With FDX-SOA12A　　With FDX-SOA12A and redundant power supply

[Fig. 9.1] “POWER 1” and “POWER 2”

After powering on the FDX-S, there is a short initialization delay before the first communication command can be received and executed. Predictable behavior during power up can be maintained by observing the recommended delay periods listed below.

[Table 9.1] Power up period

Operation	Delay period
Receiving front panel operation	15 seconds or longer
Control from WEB browser	15 seconds or longer
Receiving communication command	15 seconds or longer

9.2 Front panel operations

9.2.1 Selecting menu

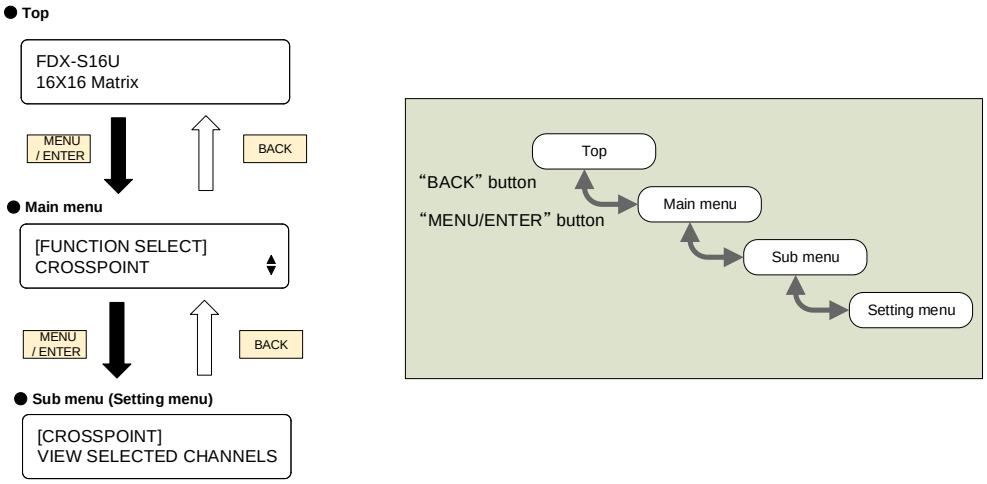
To select a menu:

1. Press the “MENU/ENTER” button.
2. Select the desired menu using “arrow” buttons.
3. Press the “MENU/ENTER” button again to proceed to the following hierarchy.

For some menus, if the LED flashes. You need to press the “MENU/ENTER” button to apply settings.

Illuminated buttons can be selected.

- “MENU/ENTER” button : Displays menu on the front display.
- “Arrow” buttons (▲・▼・◀, and ▶) : Navigates menu.
- “BACK” button : Returns to the previous hierarchy.



[Fig. 9.2] Selecting menu

Notes:

- The FDX-S menu consists of setting menus and advanced setting menus.

【See: 10.2 Menu】

- To avoid losing settings, do not interrupt power to the FDX-S while “NOW UPDATE” or “Saving” is displayed; otherwise, the setting information may be lost.

9.2.2 Selecting output video

FDX-S08U/S08　FDX-S16U/S16

To output video by selecting an output channel from an input channel or vice versa:

1. Set [ADVANCED MENU] of [SYSTEM SETTINGS] to [ON].
2. Select “MENU/ENTER” > [FUNCTION SELECT] > [SYSTEM SETTINGS] > [SELECT MODE].
3. Select the desired switching.

For channel selection, “OFF” is set by default.

If no operation is performed for 60 seconds, the FDX-S becomes in energy-saving mode and the front display goes back to the top page.

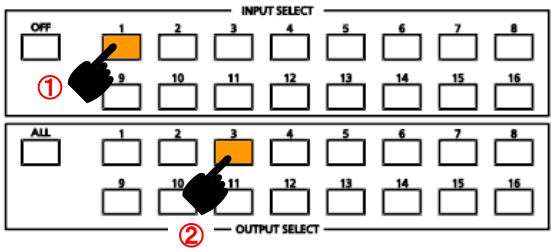
【See: 10.17.7 Channel selection mode】
【See: 10.17.5 Power saving】

■ [SELECT MODE]: [INPUT] → [OUTPUT]):

Select an input channel and then output channel.

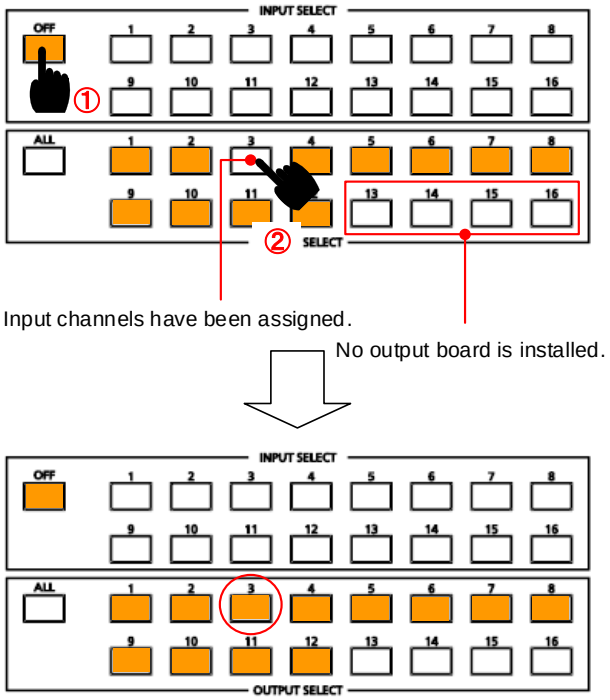
Example: FDX-S16U/S16

Example 1: Outputting IN1 video from OUT3



The selected “OUTPUT SELECT” button flashes.

Example 2: Hiding OUT3 video



The output channel that does not have output board cannot be selected.

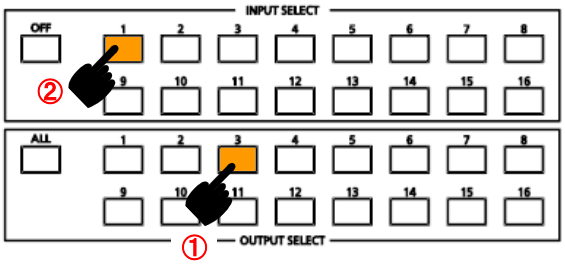
Video that is output from OUT3 is OFF.

■ **[SELECT MODE]: [OUTPUT] → [INPUT]**

Select an output channel and then input channel.

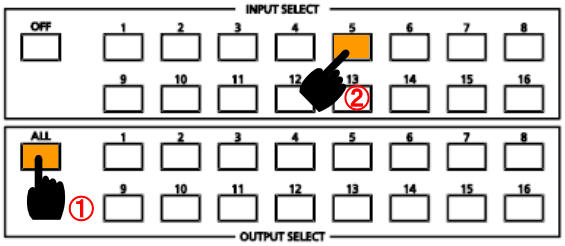
Example: FDX-S16U/S16

Example 1: Outputting IN1 video to OUT3



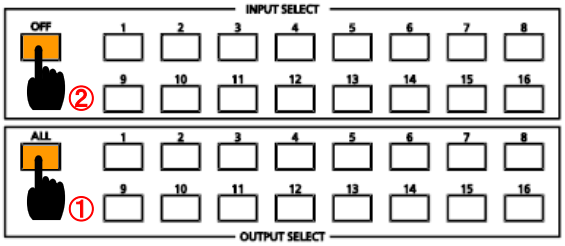
The selected “INPUT SELECT” button flashes.

Example 2: Displaying IN5 video to all output channels



The output channel that does not have board cannot be selected.

Example 3: Hiding video of all output channels



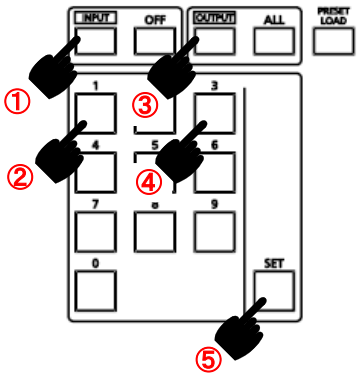
All output channel videos are not displayed.

FDX-S32U/S32　FDX-S64

Output video by selecting an output channel from an input channel or vice versa.
For crosspoint, “OFF” is set by default.
If no operation is performed for 10 seconds, the FDX-S becomes in energy-saving mode.

■ To select channel (Input channel → Output channel):
Select an input channel and then output channel.

Example 1: Outputting IN1 video from OUT3

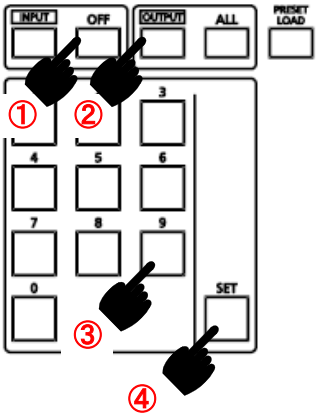


[Table 9.2] Buttons

Buttons	Description
Numeric buttons (0 to 9)	Enters number.
SET	Applies the setting.
INPUT	Specifies input channel.
OFF	Does not output video.
OUTPUT	Specifies output channel.
ALL	Selects all output channels.

The output channel that does not have board cannot be selected.

Example 2: Hiding OUT9 video

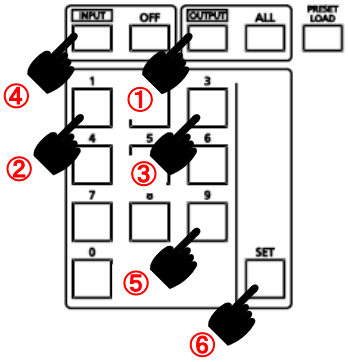


Video that is output from OUT9 is OFF.

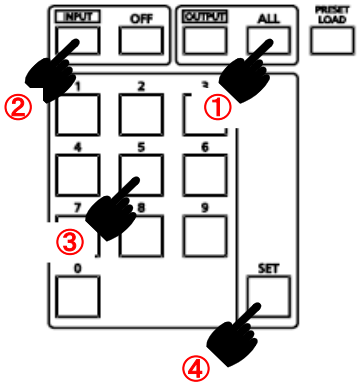
■ To select channel (Output channel → Input channel)

Select an output channel and then input channel.

Example 1: Outputting IN9 video to OUT13

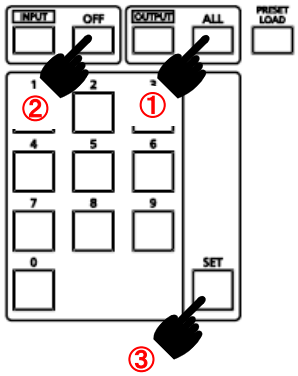


Example 2: Displaying IN5 video to all output channels



The output channel that does not have board cannot be selected.

Example 3: Hiding video of all output channels



All output channel videos are not displayed.

9.2.3 Recalling preset memory

Up to 32 crosspoint configurations can be saved in the preset memory (including crosspoint memory) that can be loaded from the menu.
Part of the FDX-S08U/FDX-S08 and FDX-S16U/FDX-S16 preset memories are assigned to "INPUT SELECT" button and can be loaded by operating front buttons.
All FDX-S32U/FDX-S32 and FDX-S64 preset memories can be loaded by operating front buttons.
If no operation is performed for 60 or 10 seconds (60 seconds for FDX-S08U/FDX-S08 and FDX-S16U/FDX-S16; 10 seconds for FDX-S32U/FDX-S32 and FDX-S64), the FDX-S becomes in energy-saving mode and the front display goes back to the top page.

【See: 10.17.5 Power saving】

[Table 9.3] Preset memory loaded from input channel selection and/or I/O channel setting buttons

P/N	Memory number
FDX-S08U/S08	No.01 to No.08
FDX-S16U/S16	No.01 to No.16
FDX-S32U/S32	No.01 to No.32
FDX-S64	No.01 to No.32

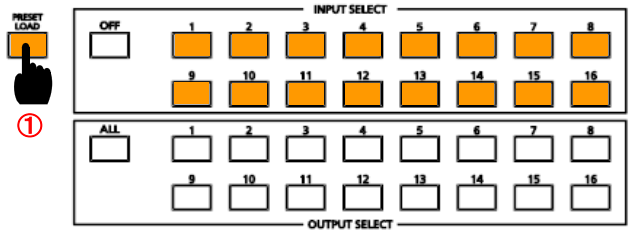
【See: 10.15 Preset memory】

FDX-S08U/S08　FDX-S16U/S16

Example: Loading preset memory No.07

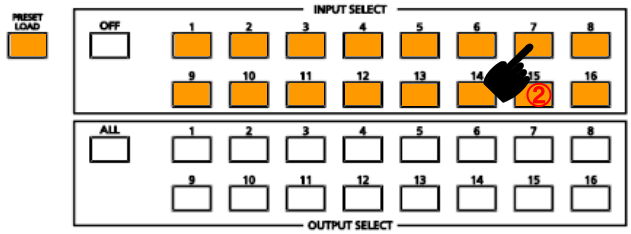
Example: FDX-S16U/S16

Step 1: Set the mode for loading preset memory.



"PRESET LOAD" button. All input channel selection buttons flash.

Step 2: Load a preset memory.



Press "INPUT SELECT 7" button to load preset memory No.07.

Step 3: Escape from the mode.

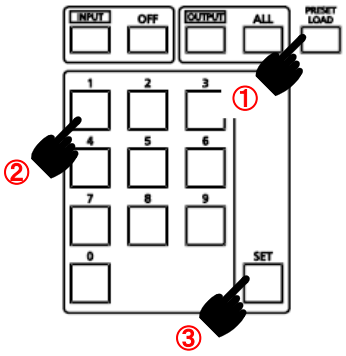
Press "PRESET LOAD" button.

FDX-S32U/S32　FDX-S64

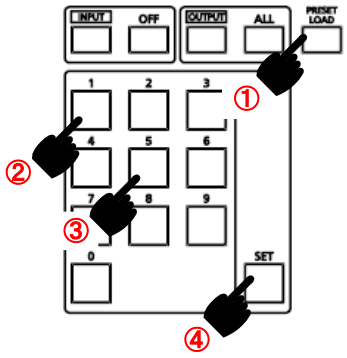
Press the “PRESET LOAD” button and preset memory registration number from “I/O channel selection” buttons (0 to 9).

Example: Selecting preset memory (No.01)/(No.15)

Selecting No.1



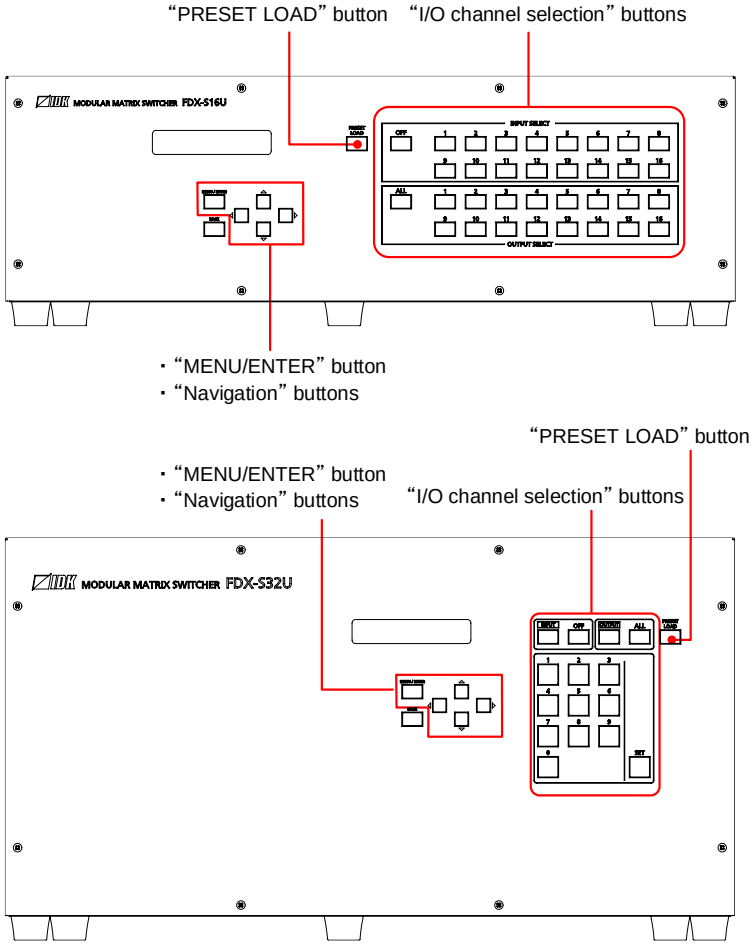
Selecting No.15



9.2.4 Front panel security lockout

The front panel security lockout limits operation of the FDX-S from the front panel to prevent accidental changes.

【See: 10.17.1 Grouping front panel security lockout】



[Fig. 9.3] Buttons/Groups to be locked (Top: FDX-S16U, Bottom: FDX-S32U)

To enable/disable the button security lockout, press and hold the “BACK” button for four seconds or longer. The ”MENU/ENTER” button flashes two seconds after pressing button and then a message below is displayed on the front display when it is enabled/disabled.

Lockout enabled : BUTTON LOCKED !
Lockout disabled : BUTTON LOCK RELEASED !

9.2.5 Initialization

All user configurable settings can be reset to their factory default values except for bitmap memory mode setting by powering the FDX-S on while simultaneously depressing the “BACK” button. Press and hold the “BACK” button until you hear a beep tone.

【See: 10.19 Factory default list】

9.3 WEB browser operations

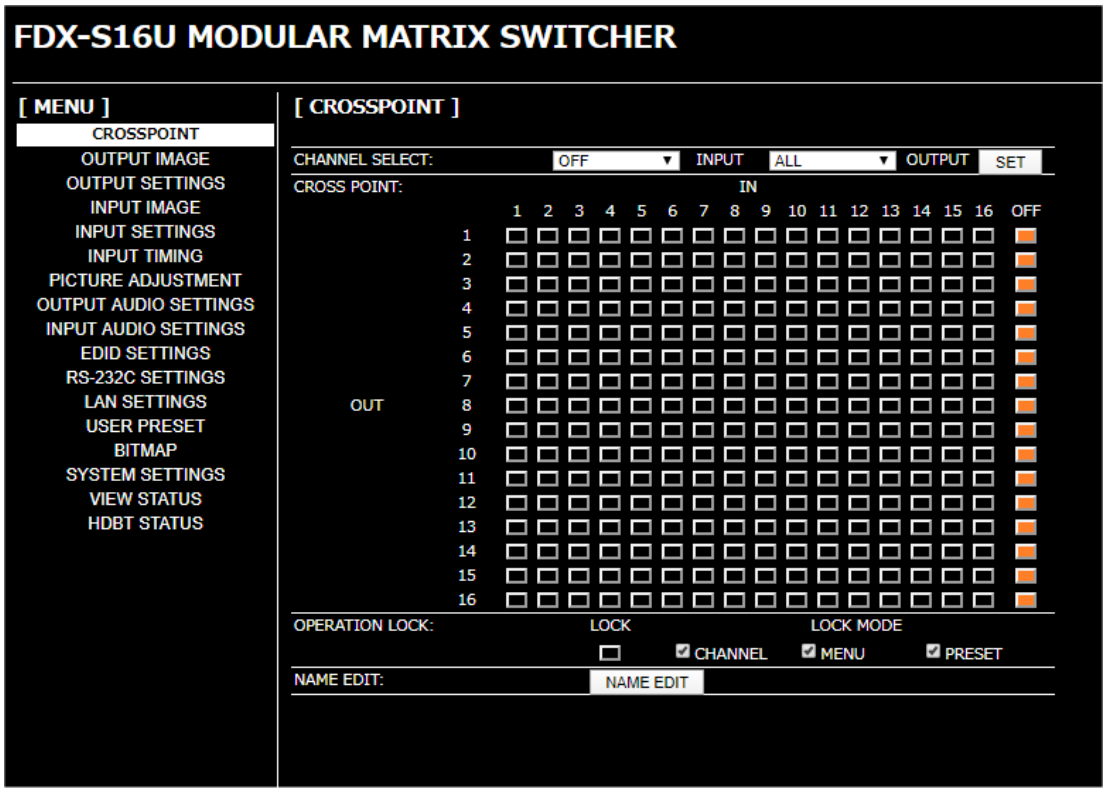
The FDX-S can be controlled, monitored, or configures remotely also over WEB browser.

9.3.1 Starting WEB browser

To start WEB browser of the FDX-S:

Step 1 : Start the WEB browser. Maximizing the window size would be recommended.
Step 2 : Enter the IP address that is programmed into the FDX-S in the address bar of the WEB browser.
Note that the default IP address is 192.168.1.199.

【See: 10.14 LAN】



[Fig. 9.4] WEB browser start window

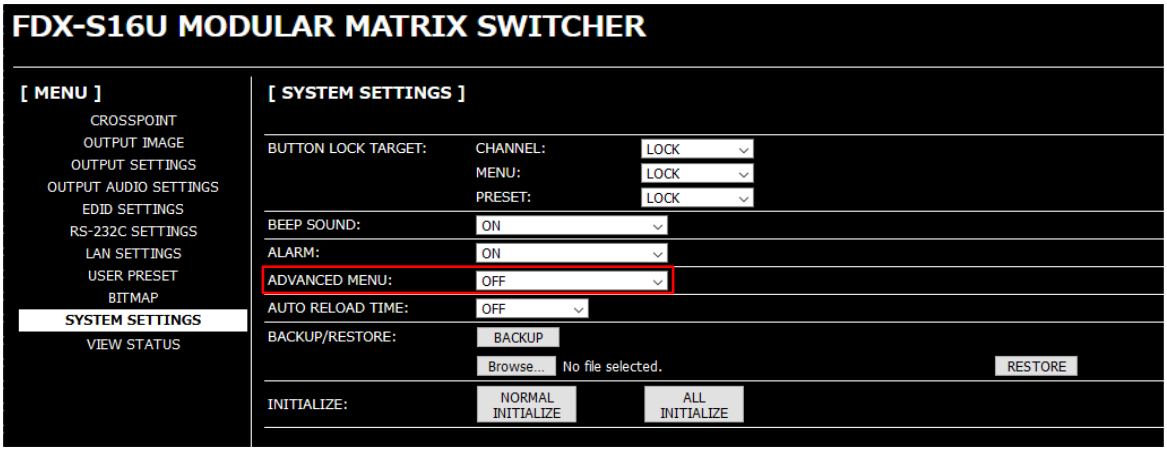
9.3.2 Normal/Advanced menu

The FDX-S menus consist of normal setting menus and advanced setting menus.

To display advanced setting menus:

1. Select [SYSTEM SETTINGS] from [MENU].
2. Set [ADVANCED MENU] to [ON]. It is set to [OFF] by default.

【See: 10.2 Menu】



[Fig. 9.5] Enabling advanced menu

9.3.3 Editing crosspoint name

To edit crosspoint name:

1. Click the [NAME EDIT] button from [CROSSPOINT] to open the [NAME EDIT] window.
2. You can edit the following names:
   - Input channel name of the “Setting” tab
   - Output channel name of the “Setting” tab
   - Model number

   Enter up to 10 one-byte characters for channel name while up to 40 one-byte characters for model number and product name.

9.3.4 Displaying HDBaseT information

The [HDBT STATUS] menu displays connected HDBaseT information.
To display this menu, switch menu display mode to Advanced setting menu.

【See: 10.17.4 Displaying advanced menu】

[Table 9.4] HDBaseT information

[1/2]

Item	Value to be displayed	Description
Video signal information		
● Resolution I/O status		
VIDEO FORMAT	1920x1080p 60.00Hz	Video signal information (1920x1080P 60 Hz)
	NO SIGNAL	No input signal
● Color space I/O status		
COLOR SPACE	YCbCr4:2:0	YCbCr 4:2:0
● Color depth I/O status		
DEEP COLOR	24 BIT COLOR	24 bit/pixel (8bit/component)
● Link status		
LINK STATUS	ON	Connected to transmitter or receiver
	OFF	Not connected
● Source status		
SOURCE STATUS	ON	Connected to source device
	OFF	Not connected
● Sink status		
SINK STATUS	ON	Connected to sink device
	OFF	Not connected
Device information		
● Device type		
LOCAL DEV TYPE	VS100RX	Example: VS100RX
● Version ID		
LOCAL VERSION ID	13 07 21 00	Example: 13.07.21.00
● Operation mode		
LOCAL OPERATION MODE	HDBaseT MODE	HDBaseT mode
	LONG REACH MODE	Long reach mode
	LPPF1 MODE	LOW POWER mode 1
	LPPF2 MODE	LOW POWER mode 2
● Connected device type		
REMOTE DEV TYPE	VS100TX	Example: VS100TX
	UNCONNECTED	Not connected
● Connected version ID		
REMOTO VERSION ID	13 07 21 10	Example: 13.07.21.10

[2/2]

Item	Value to be displayed	Description
Device information (Cont'd)		
● Operation mode of remote device		
REMOTE OPERATION MODE	HDBaseT MODE	HDBaseT mode
	LONG REACH MODE	Long reach mode
	LPPF1 MODE	LOW POWER mode 1
	LPPF2 MODE	LOW POWER mode 2
Category cable information		
● Category cable length		
CABLE LENGTH	85m	Category cable length Example: 279 ft. (85 m)
	<20m	66 ft. (20 m) or shorter
	100m<	328 ft. (100 m) or longer
	UNCONNECTED	Not connected
● Bit error rate		
VIDEO BER	10e-11	Signal bit error rate Example: 10e-11
	UNCONNECTED	Not connected
● Signal quality		
FMSEERR (dB) CURRENT VALUE	A : -22 B : -20 C : -21 D : -22	Example: A-22dB, B-20dB, C-21dB, D-22dB
	- - -	Not connected
● Maximum signal quality		
FMSEERR (dB) MAX VALUE	A : -22 B : -20 C : -21 D : -22	Example: A-22dB, B-20dB, C-21dB, D-22dB
	- - -	Not connected or [RESET MAX VALUES] is selected.
● Residual gap		
FMAXERR CURRENT VALUE	A : 0.34 B : 0.35 C : 0.32 D : 0.33	Example: A0.34, B0.35, C0.32, D0.33
	- - -	Not connected
● Maximum residual gap		
FMAXERR MAX VALUE	A : 0.34 B : 0.35 C : 0.32 D : 0.33	Example: A0.34, B0.35, C0.32, D0.33
	- - -	Not connected or [RESET MAX VALUES] is selected.

Note:

The displayed values may differ from real value depending on environment.

9.3.5 Registering bitmap

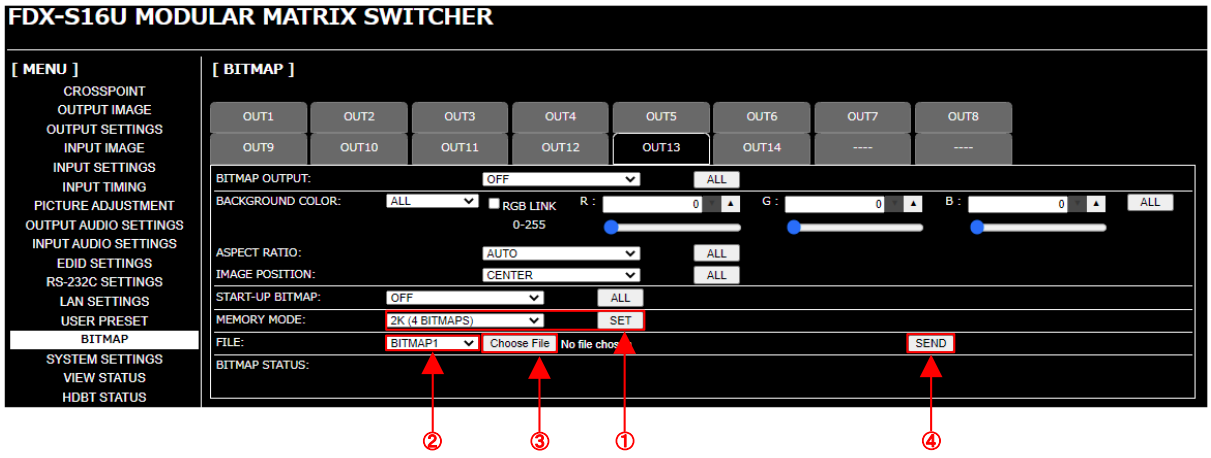
Bitmap files can be registered when a scan converter output board is installed.

- 1080p scan conversion output board :
  Up to four 2048×1152 or less bitmaps can be registered.
- 4K@60 scan conversion output board :
  2K mode : Up to four 2048×1152 or less bitmaps can be registered.
  4K mode : One 4096×2160 or less bitmaps can be registered.

To register bitmap file:

1. Select [SYSTEM SETTINGS] from [MENU].
   【See: 10.17.4 Displaying advanced menu】
2. Set [ADVANCED MENU] to [ON].
3. 2K mode (2048×1152 or less) is set by default for 4K@60 scan conversion output board. To register a bigger bitmap, change [MEMORY MODE] to [4K (1 BITMAP)].
4. Select the bitmap number (②). Click [BITMAP] > [Browse…] and select the desired bitmap file (③).
5. Click the [SEND] button (④) to register the bitmap file to the bitmap number.
   Do not operate WEB browser or power off the FDX-S until it is completed.
6. A message “Bitmap file has been saved.” appears if it is registered correctly.
   An error message appears if registration fails.

【See: 10.16 Bitmap】



[Fig. 9.6] Registering bitmap

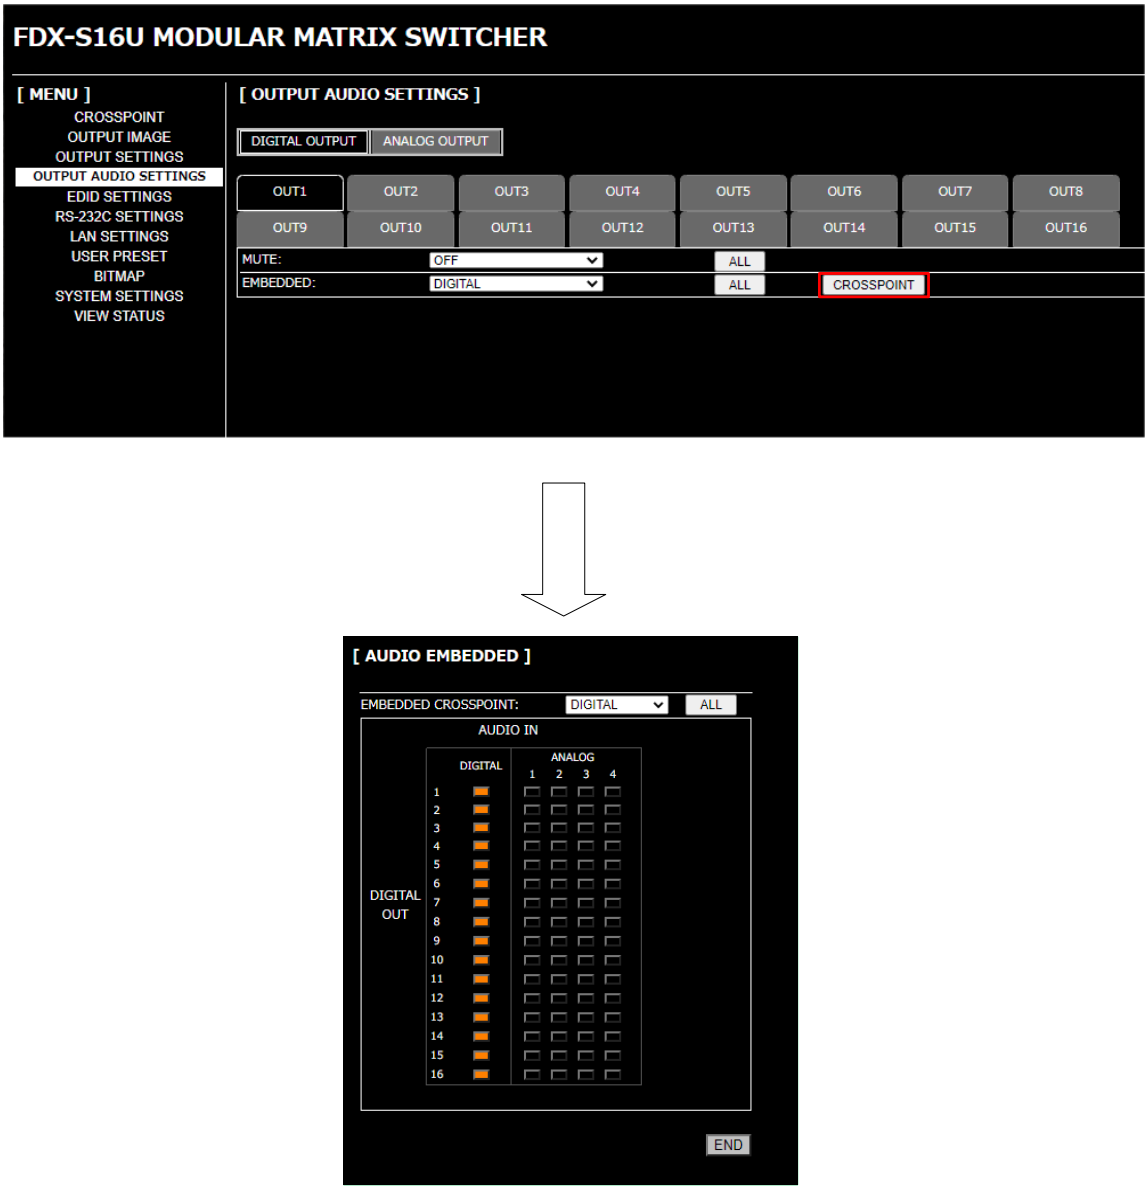
[Table 9.5] Error message

Message	Description
File Name is invalid.	The specified file name is not correct.
File Format Error is happened.	The FDX-S does not support this file.
File Size exceeds the capacity.	The file exceeds the maximum resolution.
Memory Allocation Error is happened.	The memory for temporarily saving bitmap file could not be reserved. The error may possibly be solved by turning off the “POWER” switch, turning on the switch again, and sending the bitmap file again.

9.3.6 Crosspoint menu for audio board

To display the crosspoint menu in another window.

1. Select [OUTPUT AUDIO SETTINGS].
2. Select [DIGITAL OUTPUT] or [ANALOG OUTPUT].
3. Click [CROSSPOINT] to display the list of all outputs in another window.

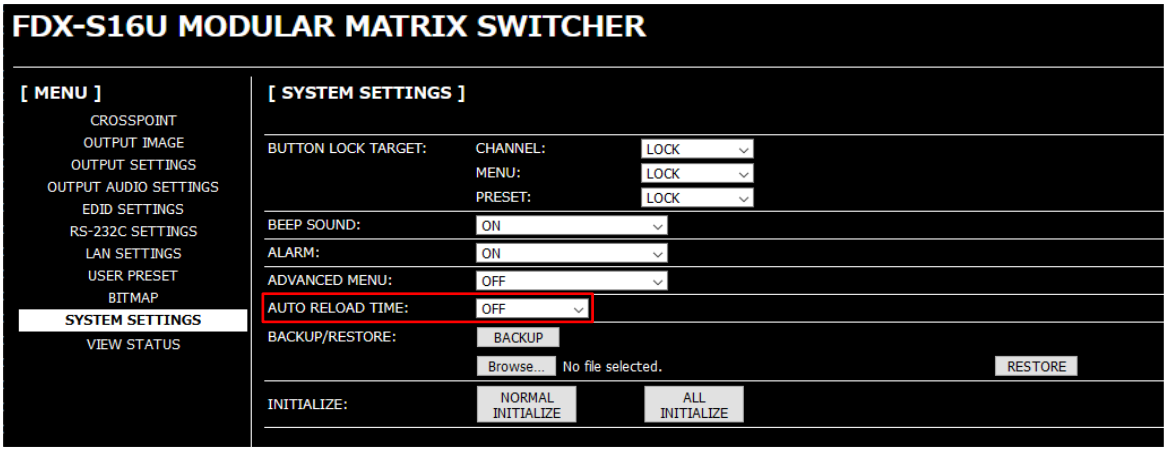


[Fig. 9.7] EMBEDDED crosspoint menu (with FDX-SAB4A)

9.3.7 Automatic reload

To set automatic reload interval of [CROSSPOINT], [VIEW STATUS], [HDBT STATUS] windows, and crosspoint menu windows of [EMBEDDED] and [DE-EMBEDDED]:

1. Select [SYSTEM SETTINGS] from [MENU].
2. Select the desired interval in 5-seconds increments (5 to 60 seconds) for [AUTO RELOAD TIME].
   [OFF] (default) for [AUTO RELOAD TIME]: [CROSSPOINT] and [VIEW STATUS] windows are not updated automatically.

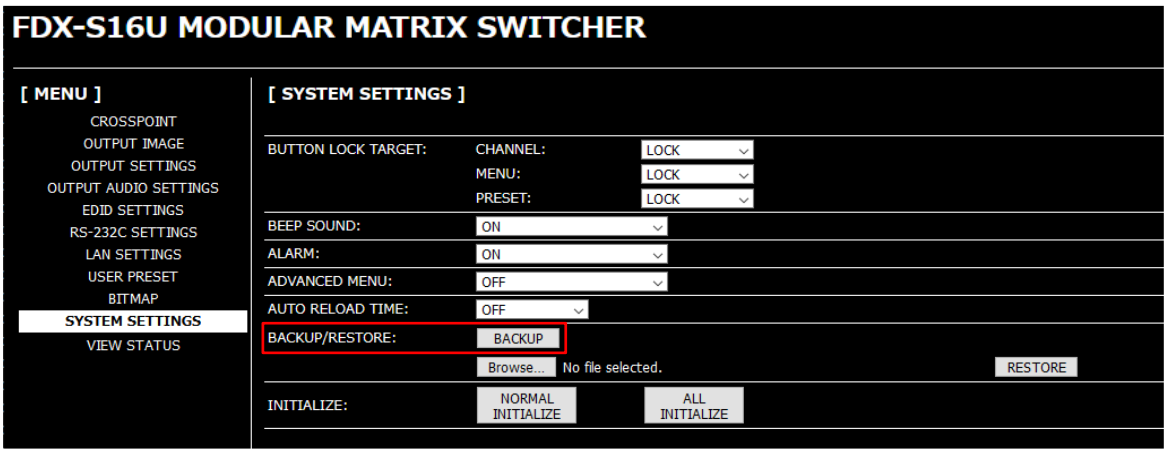


[Fig. 9.8] Setting automatic reload interval

9.3.8 Saving/Restoring settings

To save settings to a folder as a backup file:

1. Select [SYSTEM SETTINGS] from [MENU].
2. Click the [BACKUP] button of [BACKUP/RESTORE].
   Back-up file name can be edited.
   If fails, an error massage is displayed.



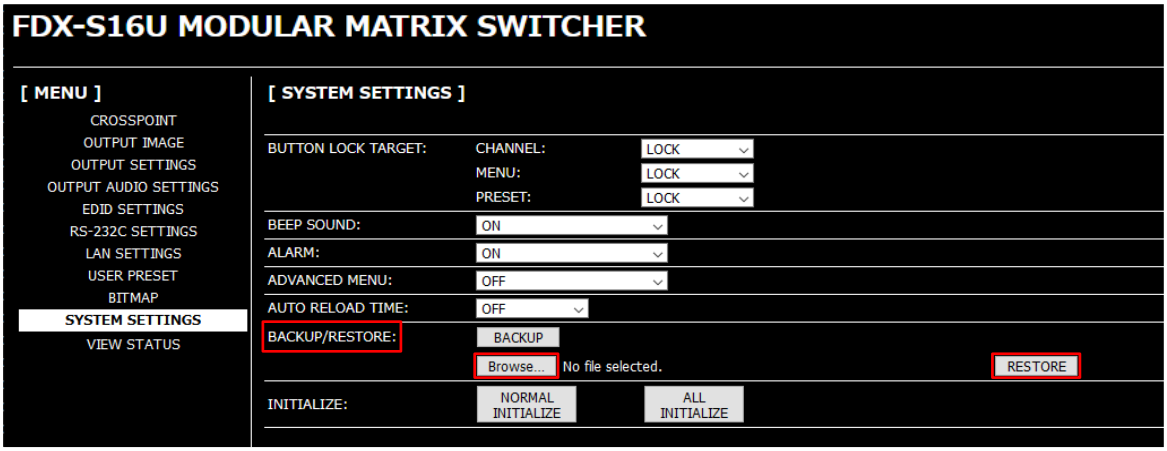
[Fig. 9.9] Saving settings

To restore settings from PC:

1. Select [SYSTEM SETTINGS] from [MENU].
2. Select a file from [Choose File].
3. Click the [RESTORE] button of [BACKUP/RESTORE]. The FDX-S reboots automatically.
   Do not perform other WEB operations or power off the FDX-S during the operation.
4. If the restoration fails, an alert dialog appears during the operation.

Note:

Do not power off the FDX-S or perform WEB menu operation until restoring finishes.



[Fig. 9.10] Restoring settings

[Table 9.6] Error message

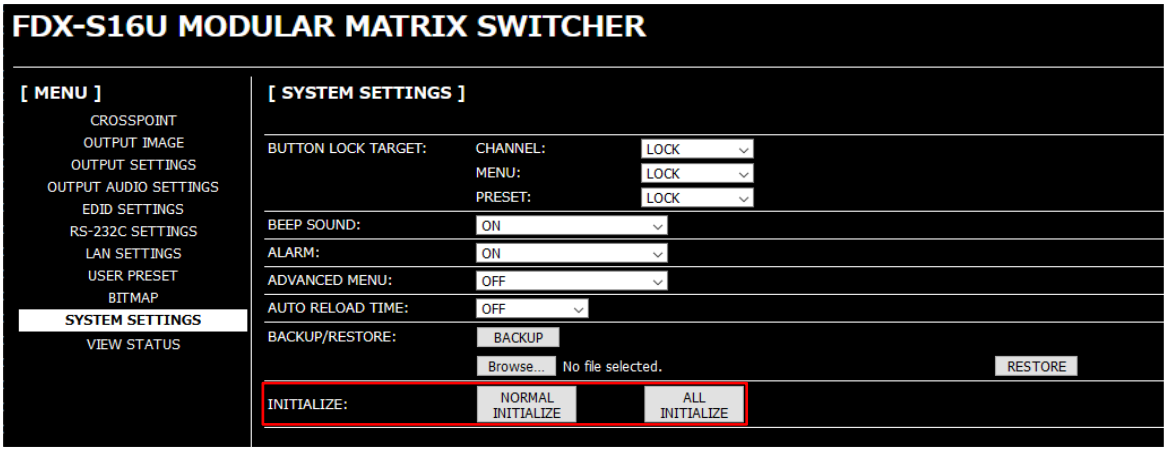
Message	Description
File Name is invalid.	The specified file name is not correct.
Memory Allocation Error is happened.	The memory for temporarily saving setting file could not be reserved. The error may possibly be solved by turning on the “POWER” switch and then power on the FDX-S.

9.3.9 Initialization

To initialize settings:

1. Select [SYSTEM SETTINGS] from [MENU].
2. For initializing settings except for bitmap memory mode and LAN communication settings: Click the [NORMAL INITIALIZE] button.
   For initializing all settings except for bitmap memory mode setting: Click the [ALL INITIALIZE] button.

【See: 10.19 Factory default list】



[Fig. 9.11] Initialization

9.4 Dante

Dante (Digital Audio Network Through Ethernet) is an audio networking technology developed by Audinate. The FDX-S separates audio that is embedded to input video signal and converts the audio to Dante format (48 kHz; 24 bits) in order to output it as network audio. The FDX-S also can embed input Dante audio to output video signal.

【See: 10.10.3 Audio embedding】
【See: 10.10.4 Audio de-embedding】

The FDX-SAB64D can transmit up to 64 Dante input channels and 64 Dante output channels.
Stereo L/R audio is assigned to two Dante audio channels. The multi-channel LPCM audio is down mixed to 2-channel audio signal and output.
Use DANTE01 to 32.
For audio boards installed to the FDX-S64, [DANTE-A01 to A32] is displayed for OPTION A while [DANTE-B01 to B32] is displayed for OPTION B.

[Table 9.7] Dante input channel assignment

Dante input channel	Stereo audio channel

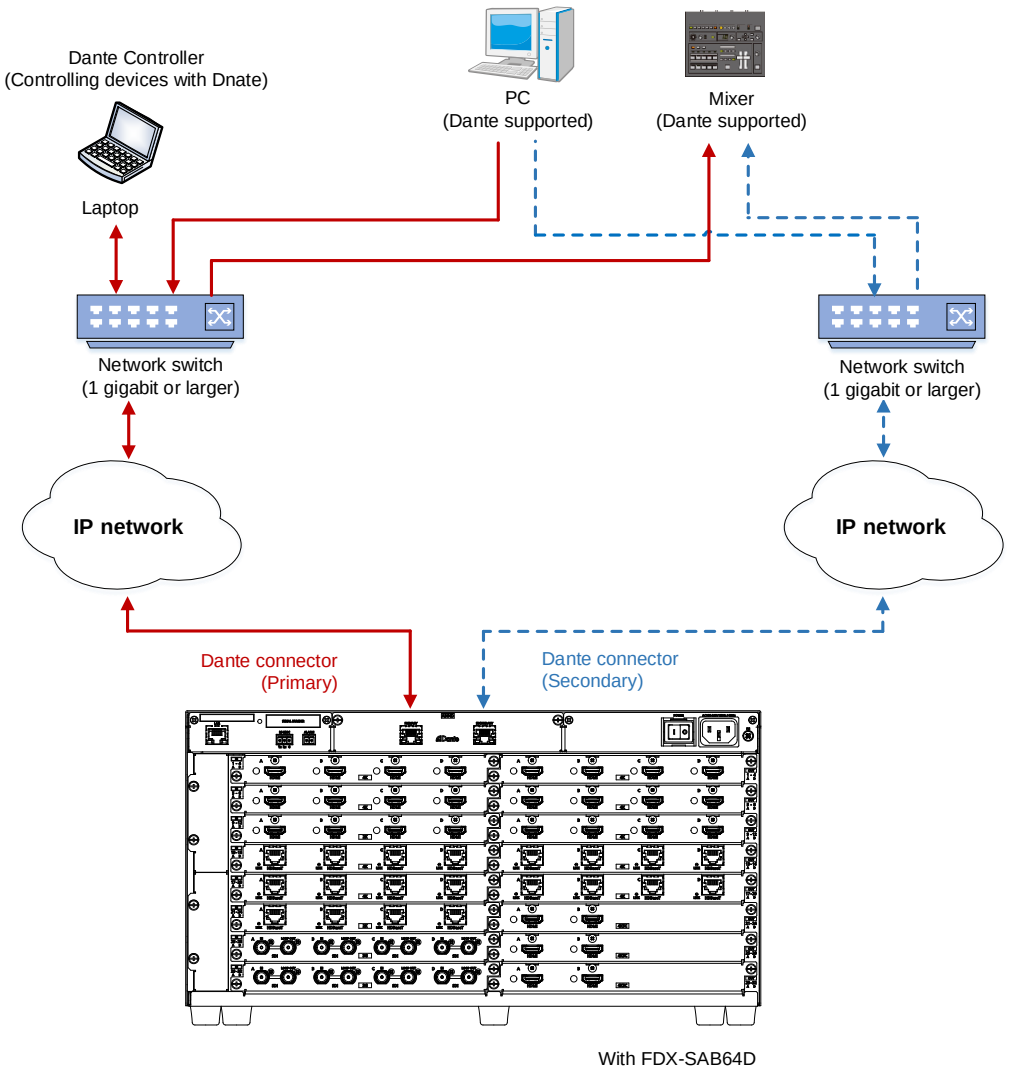
Notes:

- Compressed audio is not output as Dante audio and the audio will be muted.
- Dante I/O sampling frequency is 48 kHz. Only the same sampling frequency can be transmitted between Dante devices.

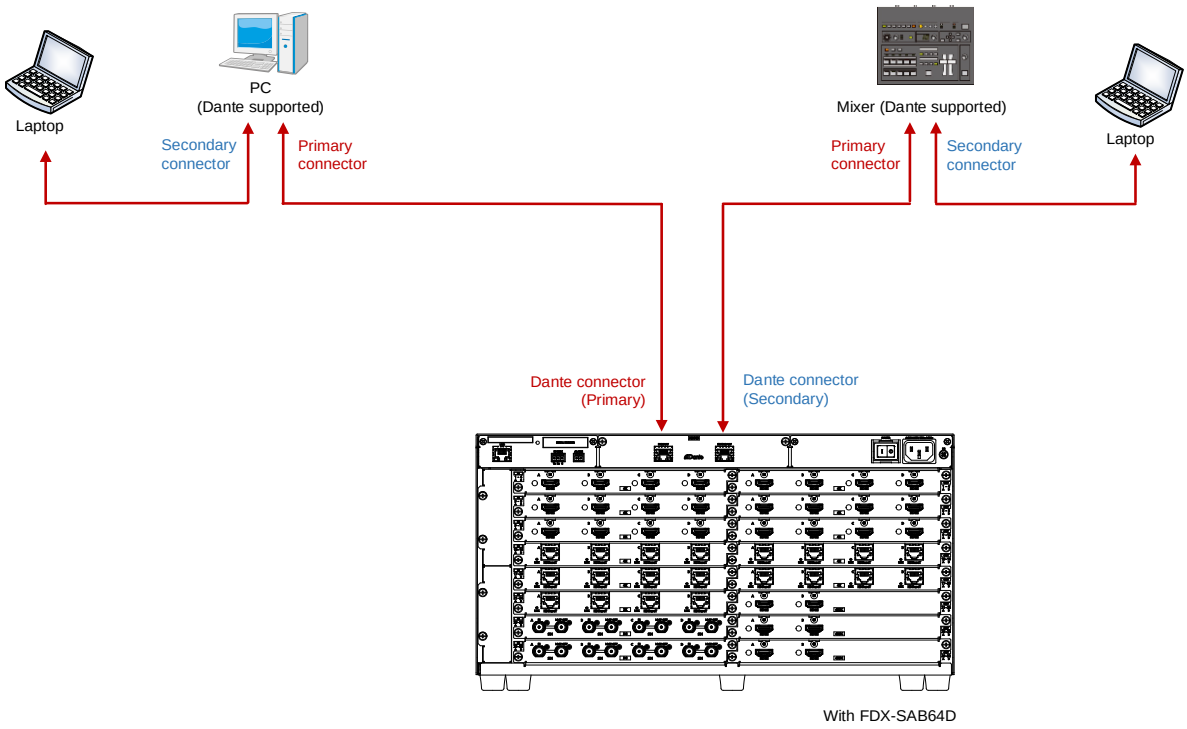
9.4.1 Dante network connection

Redundant connection and Daisy chain connection (Redundant connection is set by default) are supported for Dante devices.
The IP address for Dante connectors (Primary and Secondary) is automatically obtained over IP network.
If two Dante audio boards are installed to the FDX-S64, connect these Dante boards to network.
Use a Cat5e or better cable.



[Fig. 9.12] Redundant connection

Note:
For redundant operation, do not connect the Dante primary and secondary connectors to the same IP network.



[Fig. 9.13] Daisy chain connection

9.4.2 Dante Controller

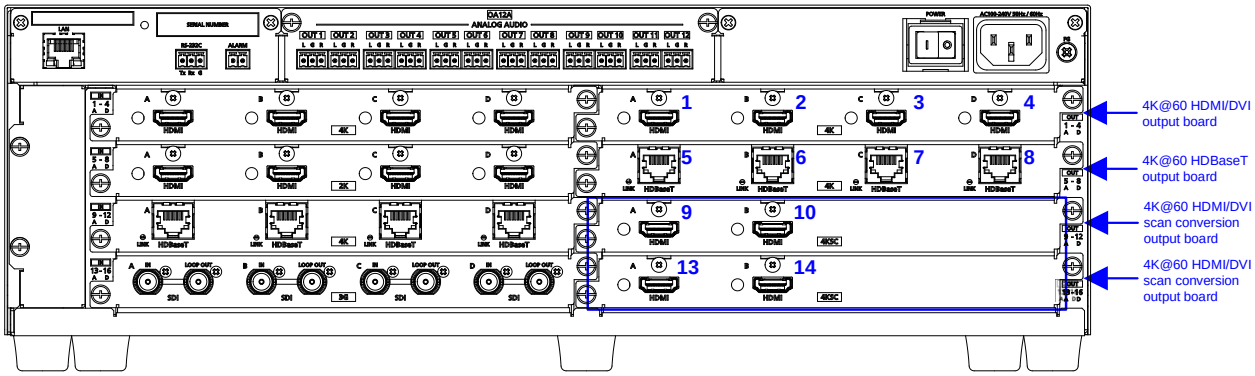
Dante Controller is software released by Audinate for controlling Dante output functions and audio routing with Dante devices. These settings are saved in each Dante device.

For “Dante Controller” details and to download the software, visit the website below:
https://www.audinate.com/

10 Configuration and Control

10.1 Board channel configuration

- An output board has four channels or two channels (4K@60 scan conversion output board).
- The channel numbers of 4K@60 scan conversion output board are the first two channels only; the rest of two channels cannot be set.
- In the configuration shown below, valid channels and invalid channels are as follows.
  4K@60 scan conversion output board: No.9 and 10, No.13 and 14 are valid; No.11 and 12, No.15 and 16 are not used.



With FDX-SOA12A

[Fig. 10.1] Board channel configuration (Example: FDX-S16U)

10.2 Menu

The FDX-S menus consist of normal setting menus and advanced setting menus.
You can switch setting menu/advanced menu, using the “MENU/ENTER” button ([FUNCTION SELECT] → [SYSTEM SETTINGS] → [ADVANCED MENU]).

The number of I/O channels and boards vary depending on the model.

“n” in this section shows the number of channels.
“m” in this section shows the number of boards.

[Table 10.1] The number of channels

P/N	n (number of channels)	m (number of boards)
FDX-S08U, FDX-S08	8	2
FDX-S16U, FDX-S16	16	4
FDX-S32U, FDX-S32	32	8
FDX-S64	64	16

If I/O channels and board numbers to which no board is installed cannot be selected, “NO BOARD” is displayed.

- WXGA (1280x768)
- XGA (1024x768)
- VGA (640x480)

*Selectable for 4K@60 scan conversion output board

You can set the output resolution.
If selecting “AT”, the optimal resolution will be selected automatically. The current output resolution is displayed on the front display.

PC resolutions (XGA, WXGA, QWXGA, and others) support 60 Hz.
480p/576p/720p/1080i/1080p/2160p/4096x2160 are timing formats relating to the CEA-861 standard while output timings of other resolutions meet VESA DMT or VESA CVT.
VESAHD, WUXGA, QWXGA, WQHD, and WQXGA are output formats that incorporate Reduced Blanking.

Press the “MENU/ENTER” button to apply the setting.

10.4.2 Aspect ratio for sink device

Scan conversion output only

Menu	Top→OUTPUT IMAGE→ASPECT RATIO
Setting for	OUT01 to OUTn
Setting value	・RESOLUTION* [Default] ・256:135 ・16:10 ・16:9 ・5:4 ・5:3 ・4:3

* If you select “RESOLUTION”, the aspect ratio of the output resolution will be applied. If aspect ratios of the target sink device and the output resolution are different from each other, you can select one of the following aspect ratios for the sink device: “4:3”, “5:3”, “5:4”, “16:9”, “16:10”, and “256:135”.

【See: 10.4.1 Output resolution】

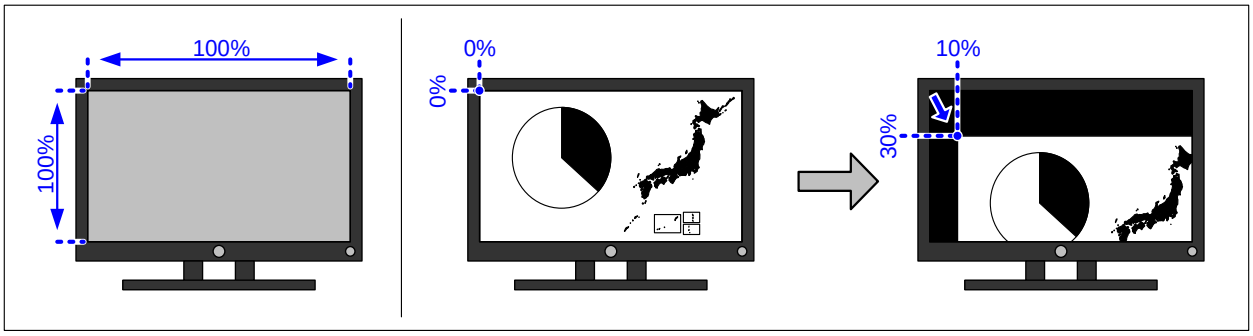
10.4.3 Image position

Scan conversion output only

Menu	Top→OUTPUT IMAGE→IMAGE POSITION
Setting for	CH01 to CHn
Setting value	Horizontal position : -2100.0% to +2100.0% [by 0.1%] [Default] 0.0% Vertical position : -2100.0% to +2100.0% [by 0.1%] [Default] 0.0%

The image position is based on the output resolution (100%), and it starts from the upper left quadrant. Images move to as below:

Setting + values : Rightward and downward
Setting – values : Leftward and upward



[Fig. 10.3] Image position

The image position is automatically set when videowall position is set. If you want to adjust the image position after the videowall position is set, use this menu.

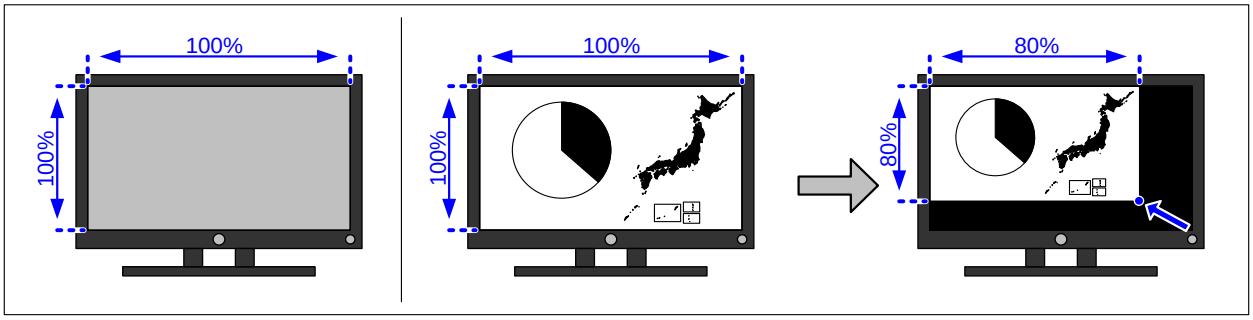
【See: 10.4.8 Videowall position】

10.4.4 Image size

Scan conversion output only

Menu	Top→OUTPUT IMAGE→IMAGE SIZE
Setting for	CH01 to CHn
Setting value	Horizontal size : 20.0% to 2100.0% [by 0.1%] [Default] 100.0%
	Vertical size : 20.0% to 2100.0% [by 0.1%] [Default] 100.0%

You can set the image size of output video.
The image size is based on the output resolution (100%), and it starts from the set image position.



[Fig. 10.4] Image size

The image size is automatically set when videowall is set. If you want to adjust the image size after the videowall is set, use this menu.

【See: 10.4.7 Videowall configuration】

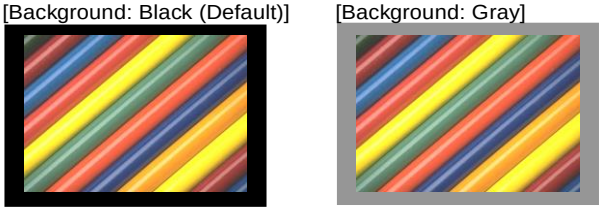
10.4.5 Background color

Scan conversion output only

Menu	Top→OUTPUT IMAGE→BACKGROUND COLOR
Setting for	ALL, OUT01 to OUTn
Setting value	R/G/B: 0 to 255 [Default] R/G/B: 0 (Black)

You can set the background color of output video signal.
Select “A” to change the settings of “R”, “G” and “B” relatively from the current setting values.

[Background: Black (Default)] [Background: Gray]

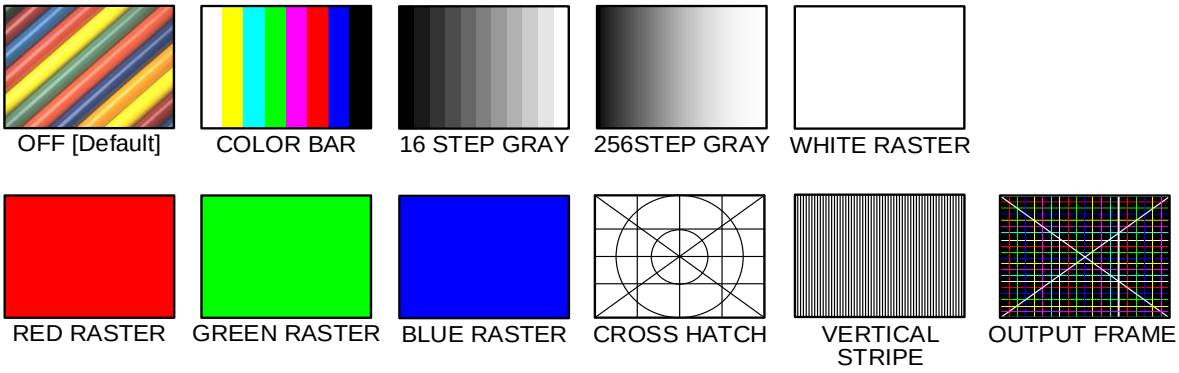


[Fig. 10.5] Background color

10.4.6 Test pattern

Scan conversion output only

Menu	Top→OUTPUT IMAGE→TEST PATTERN
Setting for	OUT01 to OUTn
Setting value	



[Fig. 10.6] Test pattern

You can activate the FDX-S's internal test pattern generator and direct its signal to each output connector.
"OUTPUT FRAME": A test pattern for videowall configuration. This pattern is linked to image position, image size, and videowall configuration, and videowall position settings.

For test patterns other than "OUTPUT FRAME": Video is output on full screen with the resolution format as set in Output resolution and the settings of Image position, and Image size will be invalid.

【See: 10.4.1 Output resolution】
【See: 10.4.7 Videowall configuration】
【See: 10.4.8 Videowall position】
【See: 10.4.3 Image position】
【See: 10.4.4 Image size】

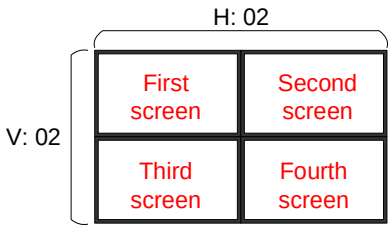
10.4.7 Videowall configuration

Scan conversion output only

Menu	Top→OUTPUT IMAGE→VIDEO WALL TYPE
Setting for	OUT01 to OUTn
Setting value	H: -- (Not control), 01 to 20 (The number of horizontal screens : 1 to 20) [Default] 01
	V: -- (Not control), 01 to 20 (The number of vertical screens : 1 to 20) [Default] 01

You can set the videowall layout.
Press the “MENU/ENTER” button to apply the setting.
Once setting is reset, image size is automatically set based on the set number of windows. If you want to keep the image size settings, select “-- (Not control)”. Image position and videowall position settings are not reset automatically.

【See: 10.4.8 Videowall position】
【See: 10.4.3 Image position】
【See: 10.4.4 Image size】



[Fig. 10.7] 2×2 videowall

10.4.8 Videowall position

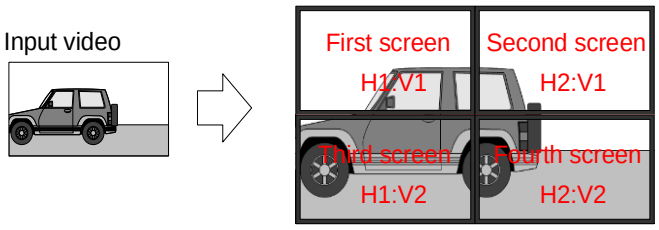
Scan conversion output only

Menu	Top→OUTPUT IMAGE→VIDEO WALL POSITION
Setting for	OUT01 to OUTn
Setting value	H: -- (Not control), 01 to 20 (Horizontal display position : First to 20th from left) [Default] 01
	V: -- (Not control), 01 to 20 (Vertical display position : First to 20th from top) [Default] 01

You can set the horizontal and vertical display positions.
Press the “MENU/ENTER” button to apply the setting.

Once setting is reset, settings of “**10.4.3 Image position**” are automatically set based on the set number of screens. If you want to keep the image position settings, select “-- (Not control)”. Image size and videowall configuration settings are not reset.

【See: 10.4.7 Videowall configuration】
【See: 10.4.4 Image size】



[Fig. 10.8] 2x2 videowall (Example: 4 screens)

10.4.9 Frame delay

Scan conversion output only

Menu	Top→OUTPUT IMAGE→VIDEO FRAME DELAY
Setting for	ALL, OUT01 to OUTn
Setting value	OFF: No frame delay [Default]
	1 : 1 frame delay
	-1 : -1 frame delay

You can set the frame delay for videowall.
The frame delay function avoids time lag that occurs between upper and lower screens.

For three or more rows of screens:
If the resolution or frame rate of I/O signal is not the same, this function cannot correct the time lag. In this case, set this menu to “OFF” and use the reverse scan function or the like of the monitors to correct the time lag.

For four or more rows of screens:
The frame delay function cannot correct the time lag. Use the reverse scan function or the like of the monitors to correct the time lag.

10.4.10 Synchronization mode

Scan conversion output only

Menu	Top→OUTPUT IMAGE→VIDEO SYNC MODE
Setting for	SLOT01 to SLOTm
Setting value	・THROUGH : Operated with synchronous signal created in inside board [Default] ・SLAVE : Follows the upper master synchronous signal. ・MASTER A : Synchronous signal of connector A is the master. ・MASTER B : Synchronous signal of connector B is the master. ・MASTER C : Synchronous signal of connector C is the master.* ・MASTER D : Synchronous signal of connector D is the master.*

*Selectable for 1080p scan conversion output board

You can set the board synchronization mode.
The reference synchronous signal is routed to lower board from the “MASTER” board.
Set this menu to “SLAVE” for the board to be synchronized to the reference signal while setting this menu to “THROUGH” for the board not to be synchronized.
For “SLAVE” and “THROUGH”, the reference synchronous signal is transmitted to lower board in unchanged form.
If several “MASTER”s are set to an upper board, the closest “MASTER” synchronous signal is routed.
Set this menu to “THROUGH” for boards that are not included in the videowall.
Set synchronization setting for each output channel in “**10.4.11 Video synchronization**”.
Set the same output resolution between output channels to be synchronized. If they are not the same, video cannot be synchronized.

【See: 10.4.1 Output resolution】

10.4.11 Video synchronization

Scan conversion output only

Menu	Top→OUTPUT IMAGE→VIDEO SYNC PROCESSING
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], ON

You can enable/disable video synchronization.
Set the same output resolution between output channels to be synchronized. If they are not the same, video cannot be synchronized.

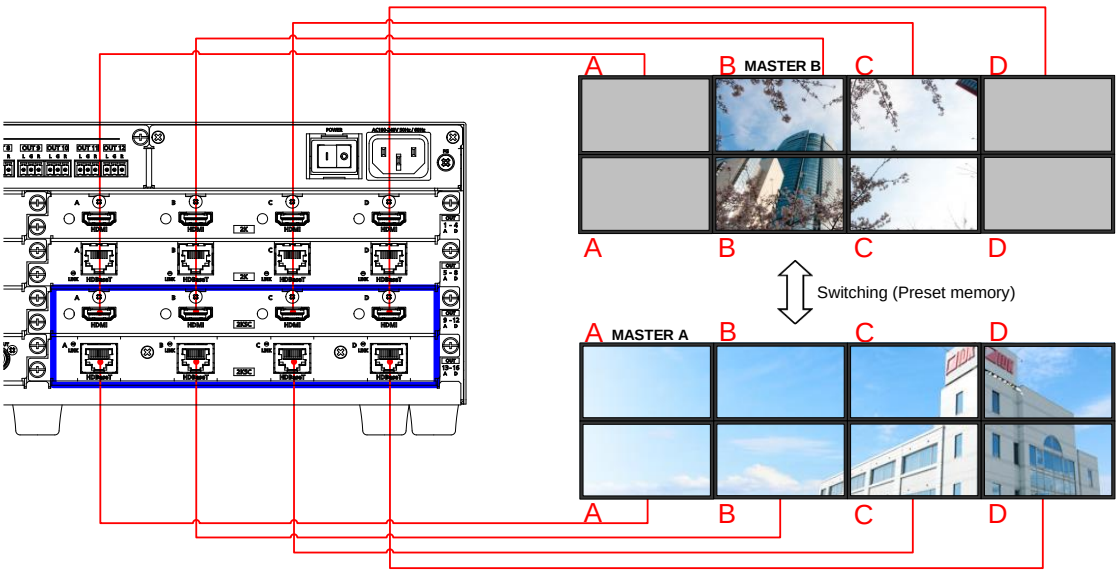
【See: 10.4.1 Output resolution】

■ Setting example

Videowall with eight screens (Example: 2×2 and 4×2)

[Table 10.2] Synchronization (Example: 2×2 and 4×2)

Setting item	Setting for	2×2	4×2
Synchronization mode	SLOT03	MASTER B	MASTER A
	SLOT04	SLAVE	SLAVE
Video synchronization	OUT09	OFF	ON
	OUT10	ON	ON
	OUT11	ON	ON
	OUT12	OFF	ON
	OUT13	OFF	ON
	OUT14	ON	ON
	OUT15	ON	ON
	OUT16	OFF	ON



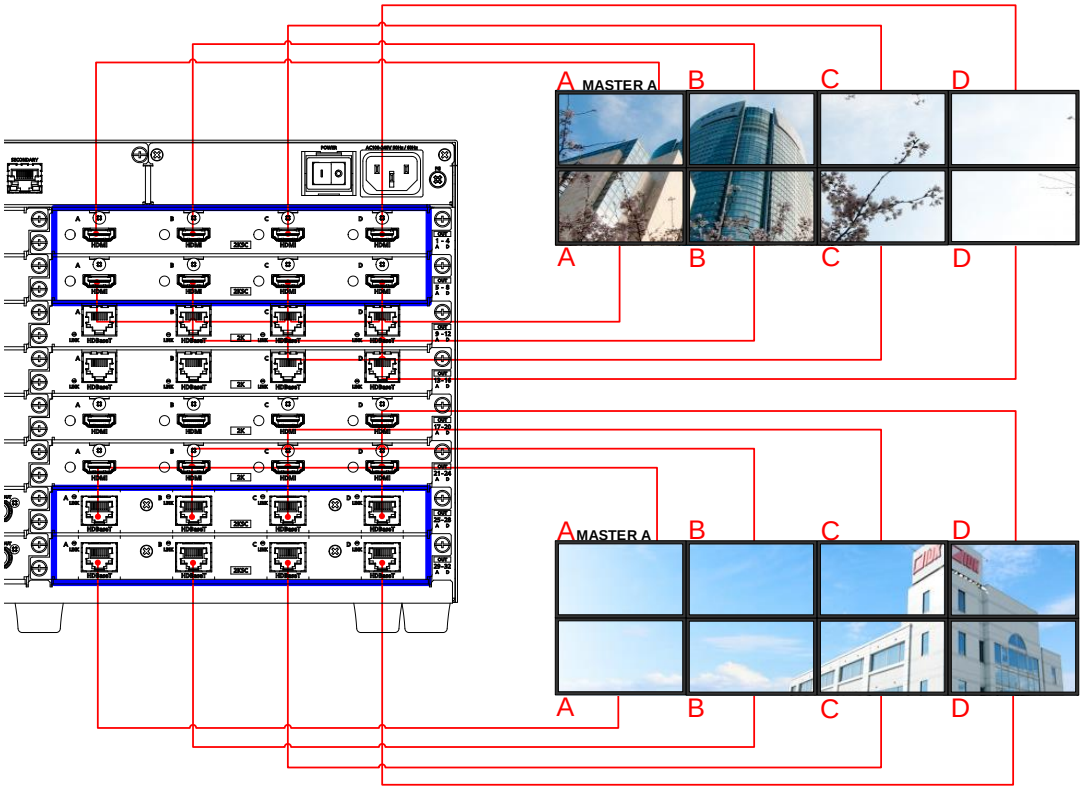
[Fig. 10.9] Synchronization (Example: 2×2 and 4×2)

- For 2×2, SLOT03-B (OUT10) is the reference synchronous signal.
- For 4×2, SLOT03-A (OUT09) is the reference synchronous signal.
- Output video signal with “ON” setting is synchronized.

The example below shows two separate videowall configurations at the same time.

[Table 10.3] Synchronization (Example: Two 4×2 videowall)

Setting item	4×2 videowall (1)		4×2 videowall (2)	
	Setting for	Setting value	Setting for	Setting value
Synchronization mode	SLOT01	MASTER A	SLOT07	MASTER A
	SLOT02	SLAVE	SLOT08	SLAVE
Video synchronization	OUT01	ON	OUT25	ON
	OUT02	ON	OUT26	ON
	OUT03	ON	OUT27	ON
	OUT04	ON	OUT28	ON
	OUT05	ON	OUT29	ON
	OUT06	ON	OUT30	ON
	OUT07	ON	OUT31	ON
	OUT08	ON	OUT32	ON



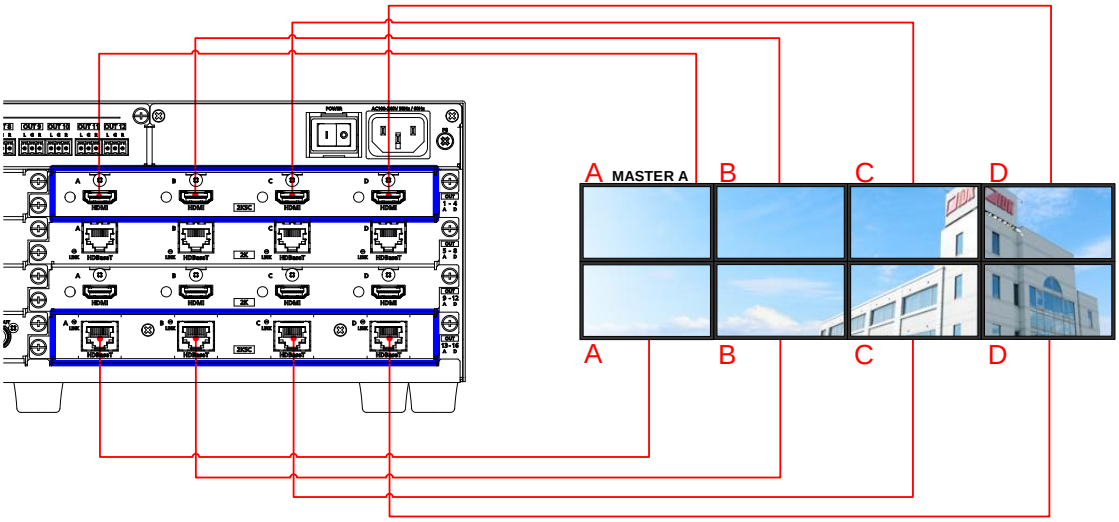
[Fig. 10.10] Synchronization (Example: Two 4×2 videowall)

For 4×2 videowall (1), SLOT01 and SLOT02 output signals are synchronized by following SLOT01-A (OUT01) that is the reference synchronous signal.
For 4×2 videowall (2), SLOT07 and SLOT08 output signals are synchronized by following SLOT07-A (OUT25) that is the reference synchronous signal.

The example below shows the case a board that is not included in the videowall configuration is installed between two videowall configuration boards.

[Table 10.4] Synchronization setting (4×2)

Setting item	Setting for	Setting value
Synchronization mode	SLOT01	MASTER A
	SLOT02	THROUGH
	SLOT03	THROUGH
	SLOT04	SLAVE
Video synchronization	OUT01	ON
	OUT02	ON
	OUT03	ON
	OUT04	ON
	OUT05 – OUT12	OFF
	OUT13	ON
	OUT14	ON
	OUT15	ON
	OUT16	ON



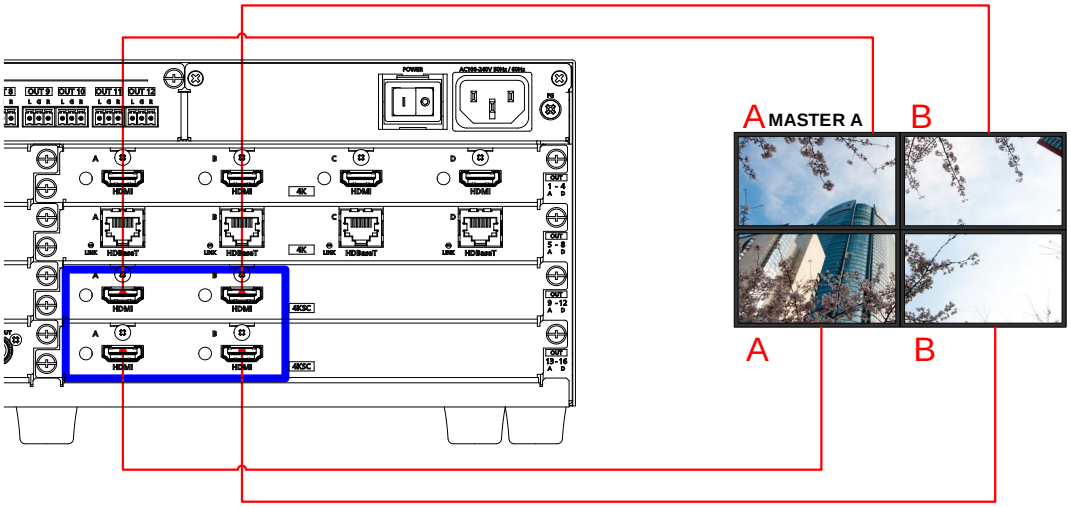
[Fig. 10.11] Synchronization setting (4×2)

SLOT01-A (OUT01) is the reference synchronous signal, and the signal is transmitted to SLOT04 through SLOT02 and SLOT03. Make sure to set “**10.4.10 Synchronization mode**” to “THROUGH” for scan converter output boards are installed to SLOT02 and SLOT03. If boards other than scan converter output board are installed to SLOT02 and SLOT03, it is set to THROUGHT” automatically.

The example below shows the case 2×2 videowall is configured using two output boards with 4K@60 scan converter.

[Table 10.5] Synchronization (2×2 videowall by two output boards with 4K@60 scan converter)

Setting item	Setting for	Setting value
Synchronization mode	SLOT03	MASTER A
	SLOT04	SLAVE
Video synchronization	OUT09	ON
	OUT10	ON
	OUT13	ON
	OUT14	ON



[Fig. 10.12] Synchronization (2×2 videowall by two output boards with 4K@60 scan converter)

SLOT03 and SLOT04 output is synchronized following SLOT03-A (OUT9).
For 4K@60 scan conversion output board, two boards are used for 2×2 videowall.

10.5 Output

10.5.1 Disabling synchronous signal output when no video signal is input

Menu	Top→OUTPUT SETTINGS→SYNC. SIGNAL OUTPUT
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], 5 Sec to 60 Sec

Scan conversion output only

You can set the waiting time to stop outputting video signals for when no video signal is input to a selected input channel or input channel selection is set to “OFF”.

10.5.2 Output video for when no input video

Scan conversion output only

Menu	Top→OUTPUT SETTINGS→NO SIGNAL IMAGE
Setting for	ALL, OUT01 to OUTn
Setting value	BACK COLOR [Default], BITMAP1 to BITMAP4

You can set video to be output when no video signal is being presented to the selected input.
To enable this function, set “**10.5.1 Disabling synchronous signal output when no video signal is input**” to OFF.
Unregistered bitmap number cannot be selected.

【See: 10.4.5 Background color】
【See: 10.16 Bitmap】

10.5.3 HDCP output

Scan conversion output only

Menu: Top→OUTPUT SETTINGS→HDCP OUTPUT MODE
Setting for: OUT01 to OUTn
Setting value:

[Table 10.6] HDCP output mode

Setting value	Description
HDCP 2.2 [Default for 4K@60 scan conversion output board]	Encrypts HDCP 2.2 preferentially
HDCP 1.4 [Default for 1080p scan conversion output board]	Encrypts HDCP 1.4
HDCP INPUT ONLY	Encrypts HDCP only if the input signal has HDCP. However, if an input is changed from one channel to another and HDCP authentication status is changed, the FDX-S starts HDCP authentication again. This action may temporarily delay the output of video and audio.
HDCP DISABLE	Does not encrypt HDCP. Only non-HDCP-compliant input signal can be output.

"HDCP 2.2" is an optional for 4K@60 scan conversion output board

You can set the HDCP output for when an HDCP-compliant sink device is connected.

10.5.4 Output equalizer

1080p HDMI/DVI scan conversion output only

Menu: Top→OUTPUT SETTINGS→SIGNAL EQUALIZATION
Setting for: ALL, OUT01 to OUTn
Setting value:

[Table 10.7] Output equalizer setting

Setting value	Equalization	Cable length*	
		Shorter than 33 ft. (10 m)	33 ft. (10 m) or longer
OFF [Default]	No equalization	✓	N/A
LOW	Low	✓	✓
MEDIUM	Middle	✓	✓
HIGH	High	N/A	✓

* IDK's cable (24 AWG) was used

Each HDMI output connector includes an equalizer that compensates for signal attenuation when long HDMI cables are connected.

Note:
If a cable equalizer, active cable, or the like is connected, the FDX-S may not equalize output correctly. In such a case, set this menu to "OFF".

10.5.5 Output format

Menu	Top→OUTPUT SETTINGS→SIGNAL FORMAT
Setting for	OUT01 to OUTn
Setting value	・AUTO [Default] ・HDMI 422 ・DVI ・HDMI RGB ・HDMI 444 ・HDMI 420* *Available only for 4K@60/59.94/50

You can select an output signal mode and color space of the output video.
The selected mode has priority and is output to the sink device with the optimal mode.

Notes:

- “HDMI 420” is only for 4K@60 output board.
- YCbCr 4:2:0 output is available only for 4K@50/59.94/60 output, for other resolution the format is set to “AUTO”.
- When 4K YCbCr 4:4:4 or 4K RGB 4:4:4 signal is input, the FDX-S outputs the signal at YCbCr 4:2:0 to the sink device supporting YCbCr 4:2:0 (not supporting YCbCr 4:4:4).
- For 4K@60 HDBaseT output board outputs at YCbCr 4:2:0 automatically, if 4K YCbCr 4:4:4 or 4K RGB 4:4:4 signal is input.
- For 4K YCbCr 4:2:0, only CEA-861 Video Format Timings are supported.
- For output boards other than scan conversion output board, DVI signal can be output if the input signal resolution is 4K@30 or less.
- For scan conversion output boards, DVI signal can be output if the output resolution is 4K@30 or less. With other resolutions, signal is output in the mode suitable for the sink device.
- If “DVI” is selected or DVI signal is output with “AUTO” setting, the assigned Dante or analog audio is not output.

【See: 10.10.3 Audio embedding】

10.5.6 HDBaseT output long reach mode

HDBaseT output only

Menu	Top→OUTPUT SETTINGS→HDBT LONG REACH MODE
Setting for	ALL, OUT01 to OUTn
Setting value	OFF : Long reach mode OFF Up to 328 ft. (100 m) [Default]
	ON : Long reach mode ON Up to 492 ft. (150 m)

You can enable/disable long reach mode for HDBaseT output.
With long reach mode, up to 1080p (24 bit)/dot clock 148 MHz is supported when using with IDK's HDBaseT product. Select a supported output format.

【See: 10.4.1 Output resolution】
【See: 10.5.7 Deep Color output】

10.5.7 Deep Color output

Menu	Top→OUTPUT SETTINGS→DEEP COLOR
Setting for	OUT01 to OUTn
Setting value	24Bit [Default], 30Bit, 36Bit

You can select the color depth of HDMI signal.
"30bit" and 36Bit": If signals are input with "30Bit" or "36Bit" and a sink device supporting Deep Color is connected, the signals are output at "30Bit" or "36Bit", respectively. Since the transmission clock of "30Bit" and "36Bit" are faster than that of "24Bit", noise may occur if a poor-quality cable or long cable is connected. In those cases, the noise may be removed by selecting "24Bit".
1080p scan conversion output board supports up to "30Bit" Deep Color.
With 4K@60 scan conversion output board, "24Bit" is supported for 4K@50/59.94 RGB/YCbCr 4:4:4, and "30Bit" is supported for other resolutions.

10.5.8 Window transition effect

Scan conversion output only

Menu	Top→OUTPUT SETTINGS→VIDEO SWITCHING EFFECT
Setting for	ALL, OUT01 to OUTn
Setting value	ON [Default], OFF

You can select a window transition effect for when the video inputs are switched.

"ON" : Transition effect is enabled; video is switched with FADE OUT-IN.
"OFF" : Transition effect is disabled; video is switched with CUT.

10.5.9 Sink device EDID check

Menu	Top→OUTPUT SETTINGS→EDID ERR. OUTPUT MODE
Setting for	OUT01 to OUTn
Setting value	

[Table 10.8] Sink device EDID check

Setting value	Description
OFF [Default]	In case of error, treated as DVI
ERROR1	In case of error, treated as HDMI without SCDC
ALWAYS1	Treated as HDMI without SCDC all the time
ERROR2	In case of error, treated as HDMI with SCDC
ALWAYS2	Treated as HDMI with SCDC all the time

The FDX-S gets EDID from the sink device and determines if the sink device is an HDMI device or DVI device. However, if the FDX-S cannot get EDID for some reasons, problems such as no audio output and the like may occur.

“ERROR2” and “ALWAYS2” are only for 4K@60 output boards.

Notes:

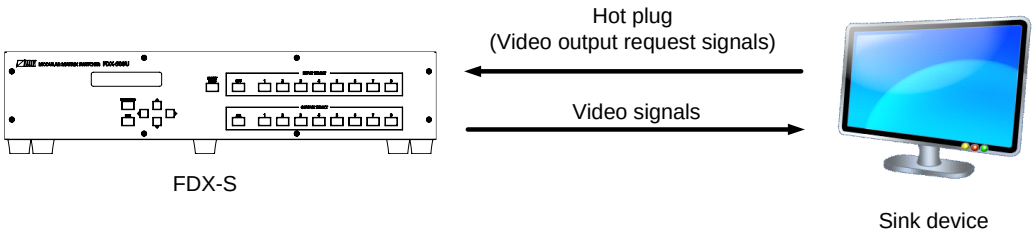
- For output boards with scan converter, this setting is applied when HDMI signal is input and “**10.5.5 Output format**” is set to a format other than DVI.
- For output boards other than scan conversion output board, this setting is applied when HDMI signal is input and “**10.5.5 Output format**” is set to a format other than DVI.
- For output boards other than scan conversion output board, if setting this menu to a value other than the “OFF”, set “**10.12.1 Resolution**” to a supported resolution other than External EDID.

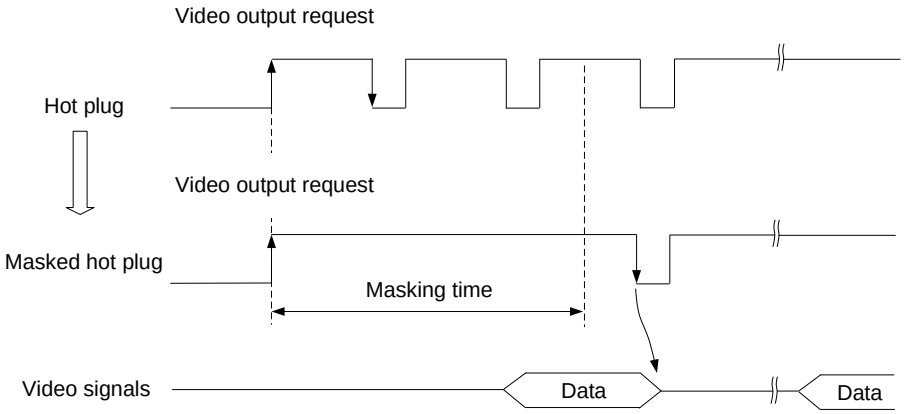
【See: 10.5.5 Output format】
【See: 10.12.1 Resolution】

10.5.10 Hot plug ignoring duration

Menu	Top→OUTPUT SETTINGS→HOTPLUG MASK
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], 2 Sec to 15 Sec

Time for ignoring the video output request signals sent from the sink device.
If the request signals are repeated in a short cycle, the FDX-S processes video output from the first cycle. As a result, video may not be output. This problem can be solved by setting the ignoring time.





[Fig. 10.13] Hot plug mask

10.5.11 DDC power output when no signal is input

Menu	Top→OUTPUT SETTINGS→DDC POWER OUT
Setting for	ALL, OUT01 to OUTn
Setting value	ON [Default], OFF

If setting to “ON”, the +5 V signal is output regardless of the presence of input signal, some sink devices are not in standby mode.

10.6 Input position, size, and cropping

10.6.1 Aspect ratio

Scan conversion output only

Menu	Top→INPUT IMAGE→ASPECT RATIO
Setting for	IN01 to INn for each input signal
Setting value	

[Table 10.9] Restoring aspect ratio (For input signal)

Setting value	TV signal	PC signal
AUTO [Default]	Follows sink device aspect ratio and its setting automatically.	
FULL	Provides a full screen output	
4:3	4:3	Follows input signal aspect ratio
5:3	5:3	
5:4	5:4	
16:9	16:9	
16:10	16:10	
16:9 LT	16:9 LETTER BOX	

You can set the aspect ratio for each video input.
If no signal is input, “No Signal” is displayed on the front display.

【See: 10.4.2 Aspect ratio for sink device】

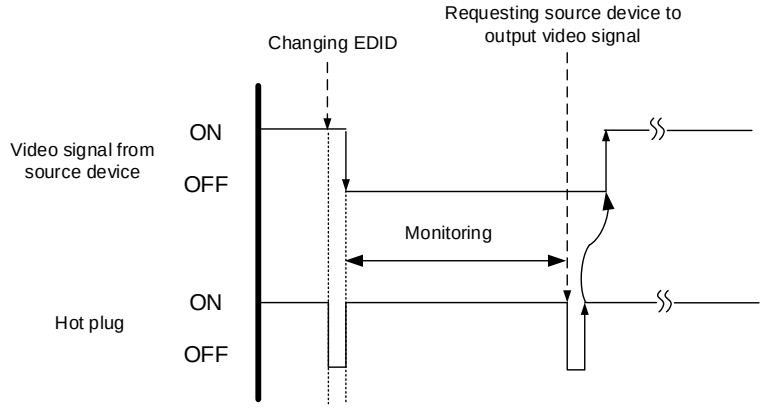
10.7 Input

10.7.1 No-signal input monitoring

Boards other than SDI

Menu	Top→INPUT SETTINGS→NO INPUT MONITORING
Setting for	ALL, IN01 to INn
Setting value	OFF, 3 Sec to 15 Sec (by 1Sec)　[Default] 10 Sec

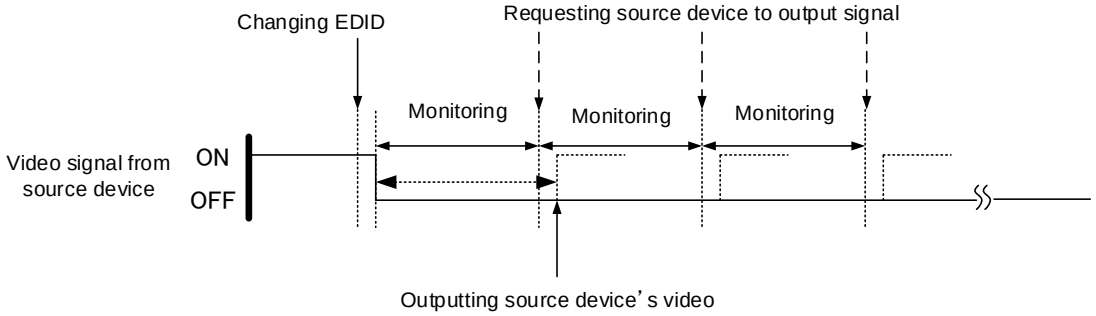
If you change the EDID settings of the FDX-S or power the FDX-S off/on, the source device may not output a video signal. Use this menu to set the monitoring time. This is the interval beginning when a source device is not outputting a signal; and ending at the point when the FDX-S requests an output from that source device.



[Fig. 10.14] Monitoring absence of input

Notes:

- If you are using the monitor power-saving or dual monitor features on your PC, set this feature to “OFF”. This will avoid potentially unpredictable operation.
- When using this feature, ensure that the “monitoring time” is set for a value greater than the amount of time needed for the source to provide an output signal.



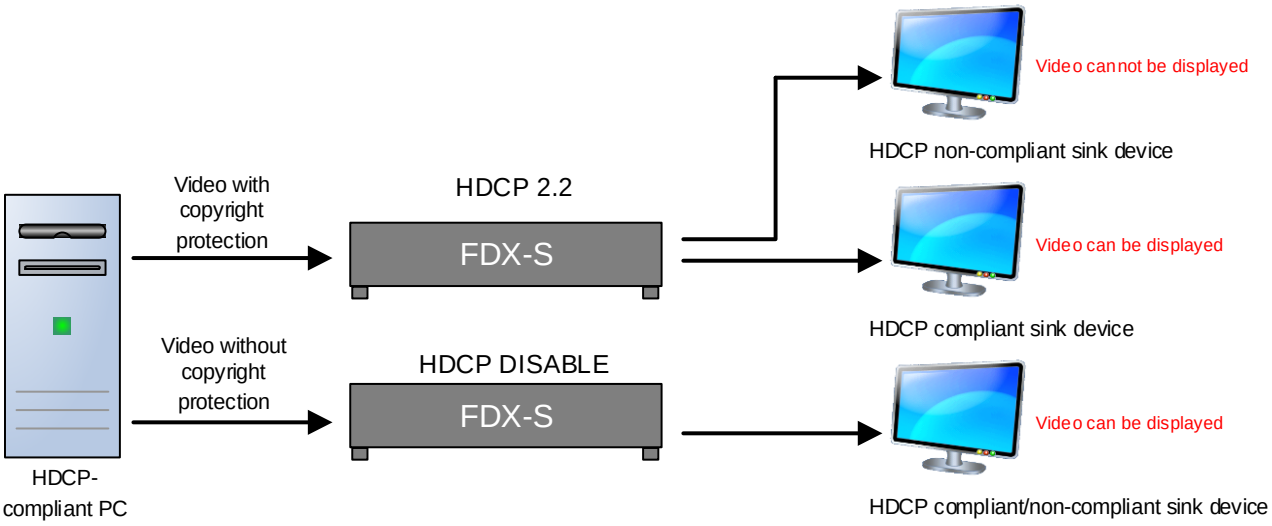
[Fig. 10.15] Repeating output reset

10.7.2 HDCP input

Boards other than SDI

Menu	Top→INPUT SETTINGS→HDCP INPUT MODE
Setting for	IN01 to INn
Setting value	HDCP 2.2 : Enabling HDCP 2.2 and HDCP 1.4 [Default]
	HDCP 1.4 : Enabling HDCP 1.4 [Default]
	DISABLE : Disabling HDCP

Some source devices negotiate with the connected device to determine if HDCP encryption is supported. After this negotiation, the source device determines whether HDCP signal encryption is enforced or not. This process takes place with some source device, even if the content being presented is not copyright protected. The FDX-S is HDCP compliant, if it is connected to a display device that does not support HDCP, even unprotected AV content may not be successfully displayed. Under these circumstances and if the content is indeed not protected, the problem can be solved by setting this menu to “DISABLE.”



[Fig. 10.16] HDCP-compliant and HDCP non-compliant sink device

Notes:

- For 4K@30 and 4K@60 boards, “HDCP 1.4” and “HDCP 2.2” are set by default, respectively.
- “HDCP2.2” can be selected only for 4K@60 input board.
- Set this setting to HDCP 2.2 or HDCP 1.4 in order to display video with copyright protection.
  - HDCP 2.2 (stream type 0) contents can be displayed on sink devices supporting HDCP 2.2/HDCP 1.4.
  - HDCP 2.2 (stream type 1) contents can be displayed on sink devices supporting HDCP 2.2 but cannot be displayed on sink devices supporting HDCP 1.4.

10.7.3 HDBaseT input long reach mode

HDBaseT input only

Menu	Top→INPUT SETTINGS→HDBT LONG REACH MODE
Setting for	ALL, IN01 to INn
Setting value	OFF : Long reach mode disabled. Up to 328 ft. (100 m) [Default]
	ON : Long reach mode enabled. Up to 492 ft. (150 m)

With long reach mode, up to 1080p (24 bit)/dot clock 148 MHz is supported when using with IDK's HDBaseT product. Set the FDX-S's EDID to 1080p or less or set the connected device's output to a supported signal format.

【See: 10.12.1 Resolution】
【See: 10.12.6 Deep Color】

10.7.4 SDI input audio group

SDI input only

Menu	Top→INPUT SETTINGS→SDI AUDIO GROUP
Setting for	IN01 to INn
Setting value	

[Table 10.10] SDI input audio group

Primary/Secondary	Setting value	Default
PRI (Primary)	1: Audio group (1ch to 4ch) 2: Audio group (5ch to 8ch)	1
SEC (Secondary)	3: Audio group (9ch to 12ch) 4: Audio group (13ch to 16ch)	2

Up to 16 audio channels are in SDI input audio, and these channels are divided into one to four groups by four channels. Two selected audio groups (primary and secondary) can be output as multi-channel audio. This function sets SDI input audio group that is assigned to multi channel audio output 8 channels.
Press the "MENU/ENTER" button to apply the setting.

10.7.5 3G-SDI Dual Stream signal input

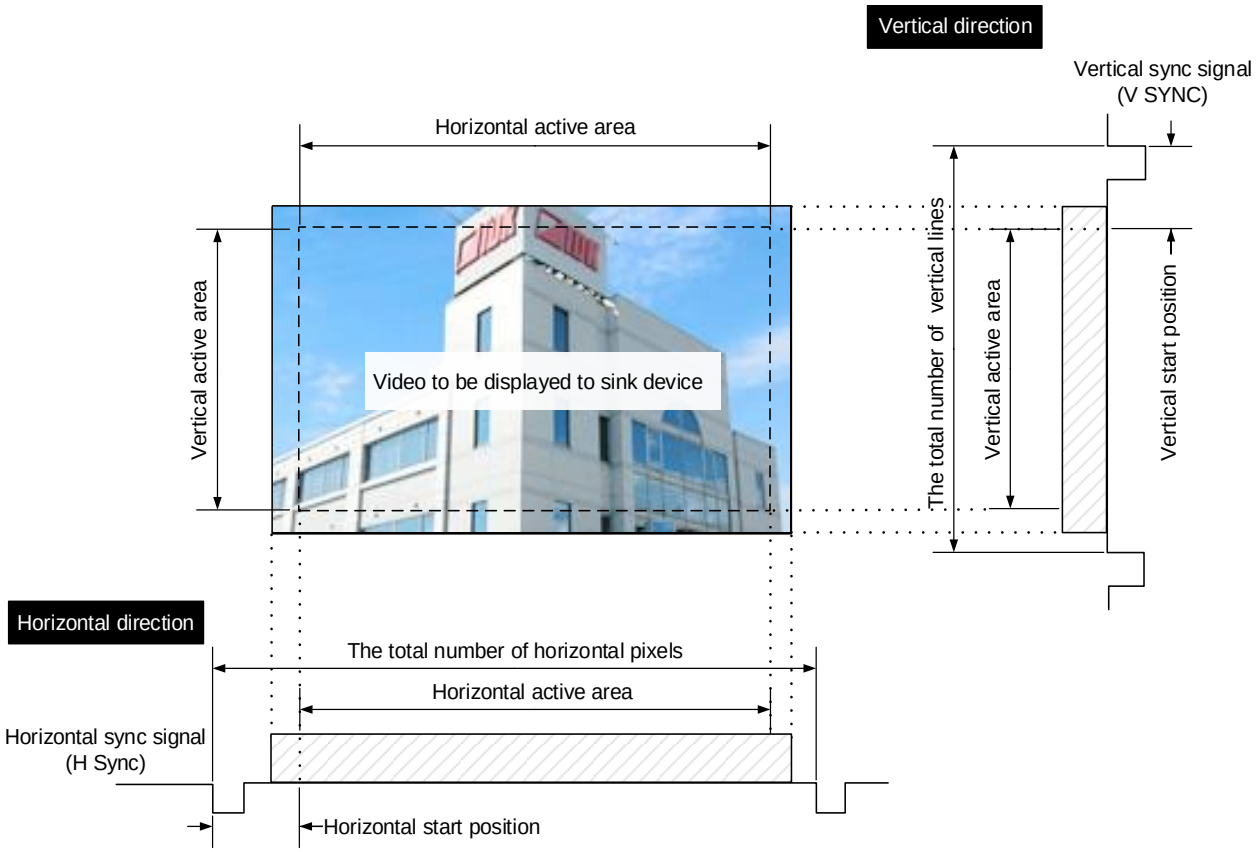
SDI input only

Menu	Top→INPUT SETTINGS→3G-SDI DUAL STREAM
Setting for	IN01 to INn
Setting value	STREAM 1: Video stream 1 [Default]
	STREAM 2: Video stream 2

Two video streams are included when 3G-SDI Dual Stream signals are input. You can select one stream to be output.

10.8 Input timing

You can set the timing parameters for analog signal inputs.



[Fig. 10.17] Input area

10.8.1 Horizontal start position

Scan conversion output only

Menu	Top→INPUT TIMING→H START POSITION
Setting for	IN01 to INn for each input signal
Setting value	-100DOT to +100DOT [Default] 0DOT

You can set the horizontal start positions of input video.

10.8.2 Horizontal active area

Scan conversion output only

Menu	Top→INPUT TIMING→H ACTIVE
Setting for	IN01 to INn for each input signal
Setting value	-100DOT to +100DOT [Default] 0DOT

You can set the horizontal active area of input video.

10.8.3 Vertical start position

Scan conversion output only

Menu	Top→INPUT TIMING→V START POSITION
Setting for	IN01 to INn for each input signal
Setting value	-30LINE to +30LINE [Default] 0LINE

You can set the vertical start positions of input video.

10.8.4 Vertical active area

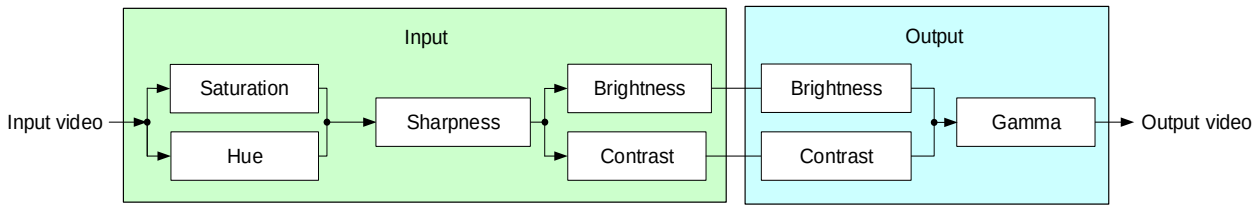
Scan conversion output only

Menu	Top→INPUT TIMING→V ACTIVE
Setting for	IN01 to INn for each input signal
Setting value	-30LINE to +30LINE [Default] 0LINE

You can set the vertical active area of input video.

10.9 Picture controls

Setting items for input channels are for correcting color bias.
Image quality to be output can be set for each input channel and output channel as follows:



[Fig. 10.18] Picture controls

10.9.1 Output brightness

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→OUTPUT BRIGHTNESS
Setting for	ALL, OUT01 to OUTn
Setting value	0% to 200%　[Default] 100%

You can set the brightness level for each output signal.

10.9.2 Output contrast

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→OUTPUT CONTRAST
Setting for	ALL, OUT01 to OUTn
Setting value	R/G/B: 0% to 200%　[Default] R/G/B: 100%

You can set the contrast for the output video image.
Select “A” to change the settings of “R”, “G” and “B” relatively from the current setting values.

10.9.3 Output gamma

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→OUTPUT GAMMA
Setting for	ALL, OUT01 to OUTn
Setting value	0.1 to 3.0 (by 0.1)　[Default] 1.0 NORMAL

You can adjust the gamma curve independently or each output signal.

10.9.4 Output video correction initialization

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→OUTPUT SETTING INIT.
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], INITIALIZE: Initializes the following settings of output video: 10.9.1 Output brightness 10.9.2 Output contrast 10.9.3 Output gamma

Press the “MENU/ENTER” button to apply the setting, and you will hear a long beep sound.

10.9.5 Input sharpness

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT SHARPNESS
Setting for	IN01 to INn for each input signal
Setting value	-5 to +15 [Default] 0 NORMAL

You can set the desired level of sharpness for each input signal.

10.9.6 Input brightness

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT BRIGHTNESS
Setting for	IN01 to INn for each input signal
Setting value	0% to 200% [Default] 100%

You can set the brightness level for each input signal.

10.9.7 Input contrast

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT CONTRAST
Setting for	IN01 to INn for each input signal
Setting value	R/G/B: 0% to 200% [Default] R/G/B: 100%

You can set the contrast for the input video image.
Select “A” to change the settings of “R”, “G” and “B” relatively from the current setting values.

10.9.8 Input hue

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT HUE
Setting for	IN01 to INn for each input signal
Setting value	0° to 359° [Default] 0°

You can set the color HUE for each input signal.

10.9.9 Input saturation

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT SATURATION
Setting for	IN01 to INn for each input signal
Setting value	0% to 200% [Default] 100%

You can set the color saturation independently for each input signal.

10.9.10 Input video correction initialization

Scan conversion output only

Menu	Top→PICTURE ADJUSTMENT→INPUT SETTING INIT.
Setting for	IN01 to INn for each input signal
Setting value	OFF [Default], INITIALIZE: Initializes the following settings of output video: 10.9.5 Input sharpness 10.9.6 Input brightness 10.9.7 Input contrast 10.9.8 Input hue 10.9.9 Input saturation

Press the “MENU/ENTER” button to apply the setting, and you will hear a long beep sound.

10.10 Output audio

10.10.1 Mute

Menu	Top→OUTPUT AUDIO SETTINGS→MUTE
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], ON

You can mute/unmute the audio of output board.

10.10.2 Output Lip Sync

Scan conversion output and analog audio output only

Menu	Top→OUTPUT AUDIO SETTINGS→LIP SYNC
Setting for	ALL, OUT01 to OUTn, ANALOG01 to ANALOG12
Setting value	0 mSec to 256 mSec [Default] 0 mSec

You can adjust the time gap between video (motion) and audio (sound).
For output lip sync of scan conversion output boards, only digital audios of selected video input channels are supported.

For the FDX-S64, up to two audio boards can be installed.
Settable analog audio output channels vary depending on the audio board and slot.

[Table 10.11] Installed board and settable analog audio output channel (For FDX-S64)

		Settable analog audio output channel
OPTION A	FDX-SAB4A	ANALOG-A01 to ANALOG-A04
	FDX-SOA12A	ANALOG-A01 to ANALOG-A12
OPTION B	FDX-SAB4A	ANALOG-B01 to ANALOG-B04
	FDX-SOA12A	ANALOG-B01 to ANALOG-B12

10.10.3 Audio embedding

Menu	Top→OUTPUT AUDIO SETTINGS→EMBEDDED
Setting for	ALL, OUT01 to OUTn
Setting value	DIGITAL [Default], ANALOG01 to ANALOG04, DANTE01 to DANTE32

You can set the audio that is output from the output board.

[Table 10.12] Audio embedding

Setting value	Description
DIGITAL	Digital audio of selected video input channel is output.
ANALOG01 to 04	Analog input audio is output. Only if FDX-SAB4A is installed.
DANTE01 to 32	Dante input audio is output. Only if FDX-SAB64D is installed.

For the FDX-S64, up to two audio boards can be installed.
Settable input channels of analog audio and Dante vary depending on the audio board and slot.

[Table 10.13] Installed board and settable audio input channel (For FDX-S64)

		Settable audio input channel
OPTION A	FDX-SAB4A	ANALOG-A01 to ANALOG-A04
	FDX-SAB64D	DANTE-A01 to DANTE-A32
OPTION B	FDX-SAB4A	ANALOG-B01 to ANALOG-B04
	FDX-SAB64D	DANTE-B01 to DANTE-B32

10.10.4 Audio de-embedding

Menu	Top→OUTPUT AUDIO SETTINGS→DE-EMBEDDED
Setting for	ALL, ANALOG01 to ANALOG12, DANTE01 to DANTE32
Setting value	IN01 to INn, OUT01 to OUTn

You can set the audio that is output from the audio board.

[Table 10.14] Audio de-embedding

Setting value	Description
IN01 to IN n	Digital audio of video input channel is output.
OUT01 to OUTn	Digital audio of video input channel that is selected for video output channel is output. If video input channel setting is changed by changing crosspoint, along with the changing, the output audio is also changed.

Settable audio output channel and default values vary depending on the audio board.
Default values are as follows.
IN01 to INn: Straight connection (If the video input board is not installed, the analog or DANTE audio channel is assigned to IN01.)

[Table 10.15] Installed board and settable audio output channel

Installed board	Settable audio output channel	Default
FDX-SAB4A	ANALOG01 to ANALOG04	IN01 to IN04 Straight connection
FDX-SOA12A	ANALOG01 to ANALOG12	IN01 to IN12 Straight connection
FDX-SAB64D	DANTE01 to DANTE32	IN01 to IN32 Straight connection

For the FDX-S64, up to two audio boards can be installed.
Settable input channels of analog audio and Dante vary depending on the audio board and slot. The default values also depend on the slot.

[Table 10.16] Installed board and settable audio output channel (For FDX-S64)

		Settable audio output channel	Default
OPTION A	FDX-SAB4A	ANALOG-A01 to ANALOG-A04	IN01 to IN04 Straight connection
	FDX-SOA12A	ANALOG-A01 to ANALOG-A12	IN01 to IN12 Straight connection
	FDX-SAB64D	DANTE-A01 to DANTE-A32	IN01 to IN32 Straight connection
OPTION B	FDX-SAB4A	ANALOG-B01 to ANALOG-B04	IN33 to IN36 Straight connection
	FDX-SOA12A	ANALOG-B01 to ANALOG-B12	IN33 to IN44 Straight connection
	FDX-SAB64D	DANTE-B01 to DANTE-B32	IN33 to IN64 Straight connection

Note:
If video input channel audio is multi-channel LPCM signal, it is down mixed.
If video input channel audio is compressed audio, it is not output (muted).

10.11 Input audio

10.11.1 Stable audio input wait

HDMI/DVI input and HDBaseT input only

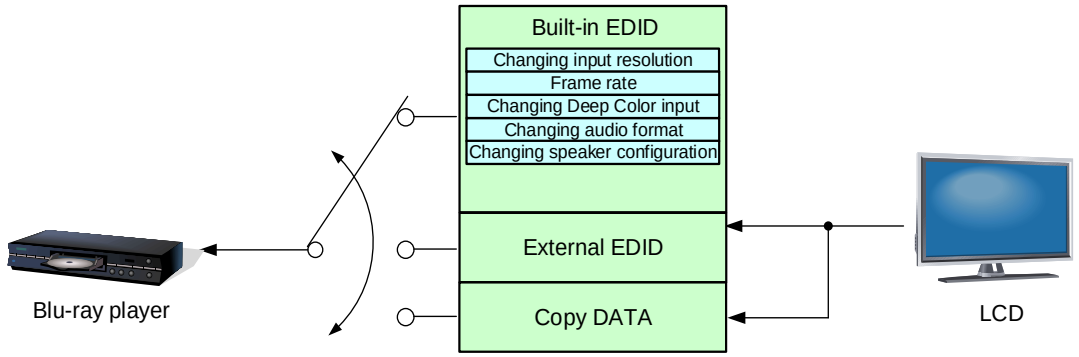
Menu	Top→INPUT AUDIO SETTINGS→STABLE WAIT
Setting for	ALL, IN01 to INn
Setting value	OFF, SHORT, MID [Default], LONG

This feature is for waiting until input audio becomes stable in order to avoid popping noise when audio source is turned on or the like.
If initial sound cannot be output, disable this feature. In such a case, however, noise may be caused at the start.

10.12 EDID

Boards other than SDI

EDID can be set using the following data:



[Fig. 10.19] Setting EDID

10.12.1 Resolution

Boards other than SDI

Menu	Top→EDID SETTINGS→RESOLUTION
Setting for	IN01 to INn
Setting value	[Table 10.17] Maximum resolution of EDID

You can set the video resolution that is output from the source device.

This setting will also be applied for controlling output resolution when AV devices (such as Blu-ray players) are connected over HDMI.
Press the “MENU/ENTER” button to apply the setting.

“05 to 45” are the built-in EDID of the FDX-S. If using the internal EDID, specify the maximum supported resolution. “41”, “42”, “44”, and “45” can be selected for channels that support up to 4K@60.

Timing of 720p, 1080i, 1080p, 2160p, and 4096×2160 is the same as that of HD signal meeting the CEA-861 standard.
For other resolutions, timing parameters meet the VESA DMT or VESA CVT standards.

HDR is supported if external EDID is selected for EDID setting while an HDR-supported sink device is connected or if copied EDID of an HDR-supported sink device is selected for EDID setting.
3D is supported if external EDID is selected for EDID setting while a 3D-supported sink device is connected or if copied EDID of 3D-supported sink device is selected for EDID setting.

[Table 10.17] Maximum resolution of EDID

[1/2]

Setting value	Maximum resolution	Pixels	Standard	Remarks
00	EXTERNAL (External EDID)	–	–	If no acquired data, the default EDID will be applied.
01	Copied EDID1	–	–	
02	Copied EDID2	–	–	
03	Copied EDID3	–	–	
04	Copied EDID4	–	–	
05	1080p	1920×1080	HDTV	[Default] (FDX-SIV4H, FDX-SIV4T)
06	720p	1280×720		
07	1080i	1920×1080		
08	SVGA	800×600	VESA	
09	XGA	1024×768		
10	VESA720	1280×720	CVT	For DVI device input
11	WXGA	1280×768	VESA	
12	WXGA	1280×800		MAC supported
13	Quad-VGA	1280×960		
14	SXGA	1280×1024		
15	WXGA	1360×768		

[2/2]

Setting value	Maximum resolution	Pixels	Standard	Remarks
16	WXGA	1366×768		
17	SXGA+	1400×1050		
18	WXGA+	1440×900		
19	WXGA++	1600×900		
20	UXGA	1600×1200	VESA	
21	WSXGA+	1680×1050		
22	VESA1080	1920×1080	CVT	For DVI device input
23	WUXGA	1920×1200	VESA	
24	QWXGA	2048×1152		
25	WQHD	2560×1440		
26	WQXGA	2560×1600		
40	2160p (24/25/30)	3840×2160	UHDTV	
41[*1]	2160p (50/59.94/60, 4:2:0)	3840×2160	UHDTV	[Default] (FDX-SIV4UT) YCbCr4:2:0 supported
42[*1] [*2]	2160p (50/59.94/60, 4:4:4)	3840×2160	UHDTV	[Default] (FDX-SIV4UH) YCbCr4:2:0, YCbCr4:2:2, YCbCr4:4:4 supported
43	4096×2160 (24/25/30)	4096×2160	DCI	
44[*1]	4096×2160 (50/59.94/60, 4:2:0)	4096×2160	DCI	YCbCr4:2:0 supported
45[*1] [*2]	4096×2160 (50/59.94/60, 4:4:4)	4096×2160	DCI	YCbCr4:2:0, YCbCr4:2:2, YCbCr4:4:4 supported

[*1] For 4K@60 input board (FDX-SIV4UH) only

[*2] Not for 4K@60 input board (FDX-SIV4UT)

Notes:

- For 4096x2160 (“43”, “44”, “45”)
  The source device may select 3840x2160 (30p, YCbCr 4:4:4) depending on the EDID definition.
  First set built-in EDID and then select 4096x2160 in the source device side.

- For YCbCr4:2:0 (“41”, “44”)
  The source device may select 3840x2160 (30p, YCbCr 4:4:4) depending on the EDID definition. First set built-in EDID and then select YCbCr 4:2:0 in the source device side.

- If a source device that does not support 4K is connected to an input connector having 4K EDID, the source device may output DVI signal meaning audio is not output. To output HDMI signal, change the EDID setting to a format other than 4K.

【See: 10.12.2 Copying EDID】
【See: 10.12.3 External EDID】

[Table 10.18] Supported resolution

Input resolution setting \ Supported resolution		640×480	800×600	1024×768	1280×720	1280×768	1280×800	1280×960	1280×1024	1360×768	1366×768	1400×1050	1440×900	1600×900	1600×1200	1680×1050	1920×1080	1920×1200	2048×1152	2560×1440	2560×1600	3840×2160(30p)	4096×2160(30p)	3840×2160(60p)	4096×2160(60p)

Y: Supported, P: Only YCbCr 4:2:0, N: Not supported, －: Not used

10.12.2 Copying EDID

Boards other than SDI

Menu	Top→EDID SETTINGS→SINK DEVICE EDID COPY
Setting for	Each copied EDID stored area (1[xxx] to 4[xxx])
Setting value	OUT01[xxx]* to OUTn[xxx]*: EDID data if sink device that is connected to output connector

* "xxx": Manufacturer ID of the saved EDID

EDID of sink device is loaded and registered to the FDX-S.
The EDID's manufacture ID [xxx]is displayed as the copied EDID name.
Press the "MENU/ENTER" button to apply the setting.

Note:
If no acquired data for copied EDID, the default EDID will be applied.

10.12.3 External EDID

Boards other than SDI

Menu	Top→EDID SETTINGS→CH. FOR EXTERNAL MODE
Setting for	ALL, IN01 to INn
Setting value	OUT1 to OUTn [Default] OUT1

You can set the output connector to be recalled when the EDID type is set to "EXTERNAL".
Press the "MENU/ENTER" button to apply the setting.

【See: 10.12.1 Resolution】

10.12.4 HDMI/DVI

Boards other than SDI

Menu	Top→EDID SETTINGS→SIGNAL FORMAT
Setting for	ALL, IN01 to INn
Setting value	HDMI [Default], DVI

You can select EDID signal format.
This setting will be valid only if one of "05 to 26", "40" or "43" is selected for EDID in "**10.12.1 Resolution**".
Press the "MENU/ENTER" button to apply the setting.

10.12.5 Frame rate

Boards other than SDI

Menu	Top→EDID SETTINGS→FRAME RATE
Setting for	ALL, IN01 to INn
Setting value	60Hz [Default], 50Hz

You can set the video frequency that is output from source device.
This setting will be valid only if one of “05” to “45” is selected for EDID in “**10.12.1 Resolution**”.
Press the “MENU/ENTER” button to apply the setting.

If “**10.12.1 Resolution**” is set to “40” or “43”, the frequency will be 25 Hz (if 50 Hz is selected) or 30 Hz (if 60 Hz is selected).

10.12.6 Deep Color

Boards other than SDI

Menu	Top→EDID SETTINGS→DEEP COLOR
Setting for	ALL, IN01 to INn
Setting value	24Bit [Default], 30Bit, 36Bit

You can set the color depth to be output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.

If you select “30Bit” and “36Bit”, compared to “24Bit”, “30Bit” and “36Bit” are transmitted using a higher clock frequency. The clock frequency may cause noise if a poor-quality or an excessively long cable is connected. In such a case, the noise may be removed by setting the color to “24Bit”.
Press the “MENU/ENTER” button to apply the setting.

Note:
For 4K@50/59.94/60 (YCbCr 4:4:4), “24 bit/pixel (8 bit/component)” is selected automatically.

10.12.7 LPCM audio

Boards other than SDI

Menu	Top→EDID SETTINGS→Linear PCM
Setting for	ALL, IN01 to INn
Setting value	

- 32kHz
- 44.1kHz
- 48kHz [Default]
- 88.2kHz
- 96 kHz
- 176.4kHz
- 192kHz

You can set the Maximum LPCM sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.8 AAC audio

Boards other than SDI

Menu	Top→EDID SETTINGS→AAC
Setting for	ALL, IN01 to INn
Setting value	

・OFF [Default] ・96kHz ・88.2kHz ・48kHz
・44.1kHz ・32kHz

You can set the maximum AAC audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.9 Dolby Digital audio

Boards other than SDI

Menu	Top→EDID SETTINGS→Dolby Digital
Setting for	ALL, IN01 to INn
Setting value	

・OFF [Default] ・48kHz ・44.1kHz ・32kHz

You can set the maximum Dolby Digital audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.10 Dolby Digital Plus audio

Boards other than SDI

Menu	Top→EDID SETTINGS→Dolby Digital Plus
Setting for	ALL, IN01 to INn
Setting value	

・OFF [Default] ・48kHz ・44.1kHz ・32kHz

You can set the maximum Dolby Digital Plus audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.11 Dolby TrueHD audio

Boards other than SDI

Menu: Top→EDID SETTINGS→Dolby TrueHD
Setting for: ALL, IN01 to INn
Setting value:
- OFF [Default]
- 192kHz
- 176.4kHz
- 96kHz
- 88.2kHz
- 48kHz
- 44.1kHz

You can set the maximum Dolby TrueHD audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.12 DTS audio

Boards other than SDI

Menu: Top→EDID SETTINGS→DTS
Setting for: ALL, IN01 to INn
Setting value:
- OFF [Default]
- 96kHz
- 48kHz
- 44.1kHz
- 32kHz

You can set the maximum DTS audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.13 DTS-HD audio

Boards other than SDI

Menu: Top→EDID SETTINGS→DTS-HD
Setting for: ALL, IN01 to INn
Setting value:
- OFF [Default]
- 192kHz
- 176.4kHz
- 96kHz
- 88.2kHz
- 48kHz
- 44.1kHz

You can set the maximum DTS-HD audio sampling frequency that is output from the source device.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

10.12.14 Speaker configuration

Boards other than SDI

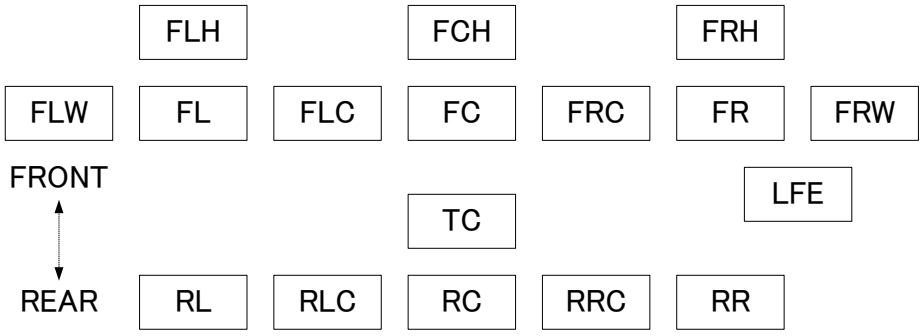
Menu	Top→EDID SETTINGS→SPEAKER CONFIGURATION
Setting for	ALL, IN01 to INn
Setting value	

- 2CH : LR [Default]
- 5.1CH: 5.1 channel surround sound
- 2.1CH: 2.1 channel surround sound
- 7.1CH: 7.1 channel surround sound

You can set the speaker configuration for multi-channel audio.
This setting will be valid only if one of “05 to 45” is selected for EDID in “**10.12.1 Resolution**” and “HDMI” is selected for “**10.12.4 HDMI/DVI**”.
Press the “MENU/ENTER” button to apply the setting.

[Table 10.19] Default speaker configuration

Number of speakers	FL/ FR	LFE	FC	RL/ RR	RC	FLC/ FRC	RLC/ RRC	FLW/ FRW	FLH/ FRH	TC	FCH
2 [Default]	ON	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
2.1	ON	ON	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
5.1	ON	ON	ON	ON	OFF	OFF	OFF	OFF	OFF	OFF	OFF
7.1	ON	ON	ON	ON	OFF	OFF	ON	OFF	OFF	OFF	OFF



FL	Front Left	RRC	Rear Right Center
FC	Front Center	LFE	Low Frequency Effect
FR	Front Right	FLW	Front Left Wide
FLC	Front Left Center	FRW	Front Right Wide
FRC	Front Right Center	FLH	Front Left High
RL	Rear Left	FCH	Front Center High
RC	Rear Center	FRH	Front Right High
RR	Rear Right	TC	Top Center
RLC	Rear Left Center		

[Fig. 10.20] Speaker configuration

10.13 RS-232C

10.13.1 RS-232C communication

Menu Top→RS-232C SETTINGS→PARAMETERS
Setting value

[Table 10.20] RS-232C communication

Parameter	Setting value	Default
Baud rate [bps]	4800, 9600, 14400, 19200, 38400	9600
Data bit length [bit]	8, 7	8
Parity check	NONE, EVEN, ODD	NONE
Stop bit [bit]	1, 2	1

You can set the RS-232C communication.
Press the “MENU/ENTER” button to apply the setting.

10.14 LAN

Note:
HDBaseT LAN communication is established only if the FDX-S is powered on.

10.14.1 IP address

Menu Top→LAN SETTINGS→IP ADDRESS
Setting value 192.168.1.199 [Default]

You can set the IP address.
Press the “MENU/ENTER” button to apply the setting.

10.14.2 Subnet mask

Menu Top→LAN SETTINGS→SUBNET MASK
Setting value 255.255.255.0 [Default]

You can set the subnet mask.
Press the “MENU/ENTER” button to apply the setting.

10.14.3 MAC address

Menu Top→LAN SETTINGS→MAC ADDRESS

You can display the FDX-S's MAC address.

10.14.4 TCP port number

Menu Top→LAN SETTINGS→PORT NUMBER
Setting value

[Table 10.21] TCP port number

1: Control from communication commands	1100 [Default], 6000 to 6999
2: Connection to be used	4 CONNECTION [Default], 8 CONNECTION

You can set the TCP port.
"4 CONNECTION" : Connections will be divided into 4 for WEB browser control (HTTP port number is fixed "80") and 4 for communication command control at maximum.
"8 CONNECTION" : Connections will be assigned to 8 communication command controls at maximum.

For communication command control, set the port number to a value from "1100", "6000" to "6999".

Press the "MENU/ENTER" button to apply the setting.

Note:
If setting this menu to "8 CONNECTION", WEB browser cannot be used any more.

10.14.5 HDBaseT Output LAN

Menu Top→LAN SETTINGS→OUTPUT HDBT COMM
Setting for ALL, OUT1 to OUTn
Setting value ON, OFF [Default]

You can enable/disable the LAN capabilities of each HDBaseT output connector.

10.14.6 HDBaseT Input LAN

Menu Top→LAN SETTINGS→INPUT HDBT COMM
Setting for ALL, IN1 to INn
Setting value ON, OFF [Default]

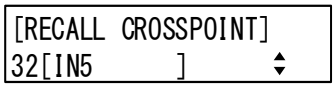
You can enable/disable the LAN capabilities of each HDBaseT input connector.

10.15 Preset memory

The FDX-S includes up to 32 crosspoint memories and 32 preset memories, and default values are set in each memory. While the former can save and load video I/O channel settings (crosspoint), the latter can save and load other settings, such as picture control settings and the like, in addition to the crosspoint settings.

10.15.1 Recalling crosspoint

Menu	Top→USER PRESET→RECALL CROSSPOINT
Setting for	01 to 32



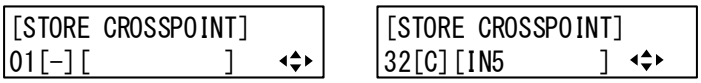
[Fig. 10.21] Front display (Sample)

You can recall the I/O channel settings.
Press the “MENU/ENTER” button to apply the setting.

【See: 10.15.2 Saving crosspoint】

10.15.2 Saving crosspoint

Menu	Top→USER PRESET→STORE CROSSPOINT
Setting for	01 to 32



[Fig. 10.22] Front display (Sample)

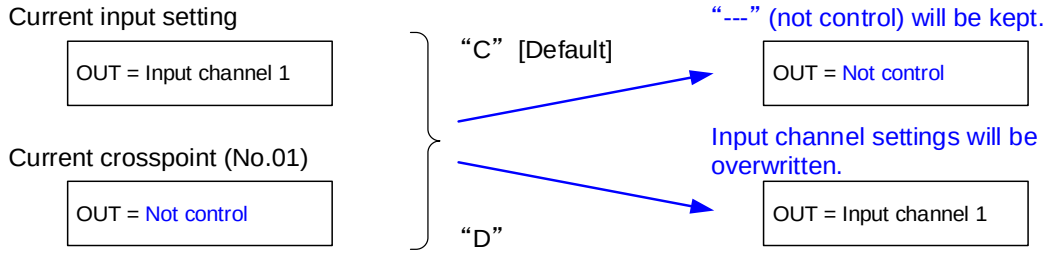
You can save the I/O channel settings of video into the crosspoint memory.
Up to 32 crosspoint memories can be saved with their name (up to 10 characters).
You can skip the naming procedure. If you set “---” (not control) for Editing crosspoint, a writing method (CONTINUE (C) or DELETE (D)) can be selected.
Press the “MENU/ENTER” button to apply the setting.

【See: 10.15.3 Editing crosspoint】

■ **For writing**

"C" : The setting ("---") will be kept in the crosspoint.

"D" : The current input channel settings will be overwritten.



[Fig. 10.23] Saving crosspoint

10.15.3 Editing crosspoint

Menu	Top→USER PRESET→EDIT CROSSPOINT
Setting for	01 to 32
Setting value	

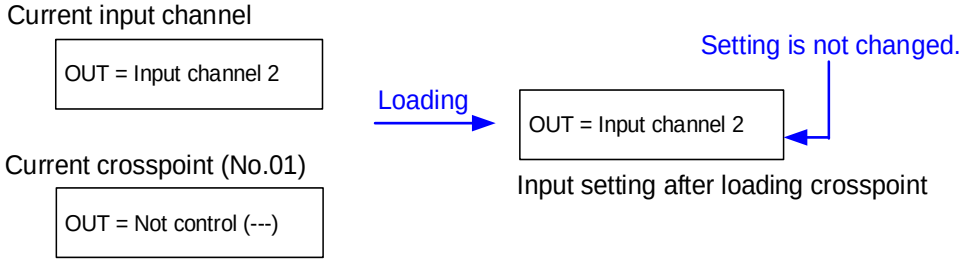
[Table 10.22] Editing crosspoint

Setting item	Setting value	Default
Output channel (OUT)	OUT01 to OUTn	OUT01
Input channel	--- (not control), 1 to n, OFF	---
Memory name (NAME)	20 to 7D of ASCII code	20 (space)

You can edit crosspoint settings.
Select the memory number, and then edit the desired setting.
Press the "MENU/ENTER" button to apply the setting.

■ **Not controlling channel**

If you select "---" when setting input channel, channels are not controlled.
Outputs that are set not to be controlled are not switched when crosspoint is loaded.



[Fig. 10.24] Loading edited crosspoint

10.15.4 Recalling preset memory

Menu	Top→USER PRESET→RECALL PRESET SETTINGS
Setting for	01 to 32

[Fig. 10.25] Front display (Sample)

You can recall settings that are saved in the preset memories.
Press the “MENU/ENTER” button to apply the setting.

【See: 10.15.5 Saving preset memory】

10.15.5 Saving preset memory

Menu	Top→USER PRESET→STORE PRESET SETTINGS
Setting for	01 to 32
Setting value	

You can save up to 32 preset memories and name these memories up to 10 characters from ASCII 20 to 7D.
You can skip the naming procedure.
Press the “MENU/ENTER” button to apply the setting.

[Table 10.23] Settings saved in preset memory

Menu	Description
Selecting output video	Selecting input channels
Output position, size, and masking	Output resolution, Aspect ratio for sink device, Image position, Image size, Background color, Test pattern, Videowall configuration, Videowall position, Frame delay, Synchronization mode, Video synchronization
Output	Output video for when no input video
Picture controls	Output brightness, Output contrast, Output gamma
Output audio	Audio embedding, Audio de-embedding
Bitmap	Bitmap image output, Background color, Aspect ratio, Image position

10.15.6 Start-up setting

Menu Top→USER PRESET→START-UP

Setting value

[Table 10.24] Start-up setting

Setting value	Description
LAST CHANNEL [Default]	Starts with the settings last time the FDX-S powered off.
CHANNEL OFF	Turns channel OFF. Starts with the settings other than channel setting last time the FDX-S powered off.
PRESET MEMORY 1 to PRESET MEMORY 32	Starts with the settings saved in the preset memory. For settings that are not saved in the preset memory, settings last time the FDX-S powered off will be applied.

You can configure which settings will be applied at start-up.

10.16 Bitmap

Scan conversion output only

One bitmap file of bitmap files registered in the FDX-S can be displayed on the sink device. No bitmap is registered by default.
A bitmap can be enlarged but cannot be reduced.

【See: 9.3.5 Registering bitmap】
【See: 10.16.6 Memory mode of bitmap file】

■ Conditions of bitmap file

The FDX-S supports DIB (Device Independent Bitmap) with a header generally used for Windows, and those files must meet the following requirements:

[Table 10.25] Bitmap file condition

Item	Condition
File header	“BITMAPFILEHEADER”
Information header	“BITMAPCOREHEADER” (for OS/2)/ “BITMAPINFOHEADER” (for Windows)
The number of colors	2 colors (monochrome, 1 bit), 16 colors (4 bits), 256 colors (8 bits), 16.77 million colors (TRUE COLOR, 24 bits)
Resolution	2K (4 BITMAPS) mode: 2048×1152 or lower per bitmap 4K (1 BITMAP) mode: 2048×1152 or lower per bitmap*
Compression format	No compression (BI_RGB), 8 bit-run-length compression (BI_RLE8), 4 bit-run-length compression (BI_RLE4)

*“4K mode”: Settable only when 4K@60 scan conversion output board is installed.

10.16.1 Bitmap image output

Scan conversion output only

Menu	Top→BITMAP→BITMAP OUTPUT
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], 1 to 4 (BITMAP)

You can enable/disable the bitmap image output.
Unregistered bitmap image cannot be selected.

10.16.2 Background color

Scan conversion output only

Menu	Top→BITMAP→BACKGROUND COLOR
Setting for	ALL, OUT01 to OUTn, 1 to 4 (BITMAP)
Setting value	R/G/B: 0 to 255 [Default] R/G/B: 0 (Black)

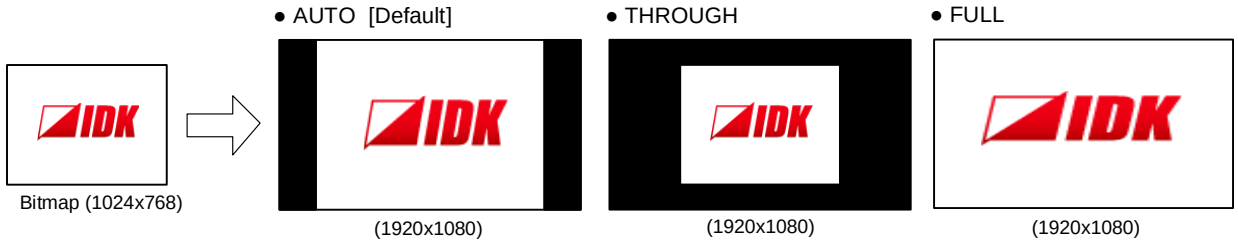
You can set the background color of the bitmap for each output channel bitmap
If “A” is selected, all “1” to “4” BITMAP can be set.
Select “L” to change the settings of “R”, “G” and “B” relatively from the current setting values.

10.16.3 Aspect ratio

Scan conversion output only

Menu	Top→BITMAP→ASPECT RATIO
Setting for	ALL, OUT01 to OUTn, 1 to 4 (BITMAP)
Setting value	AUTO [Default], THROUGH, FULL

You can set the aspect ratio of the bitmap for each output channel bitmap.
If “A” is selected, all “1” to “4” BITMAP can be set.
If you select “AUTO”, the aspect ratio is kept. However, if bitmap is larger than output resolution, only a portion of the bitmap is displayed.



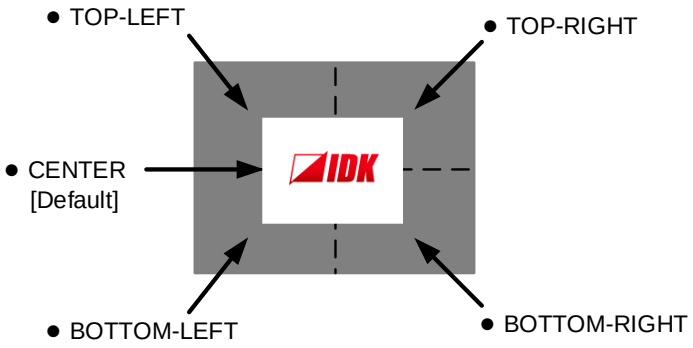
[Fig. 10.26] Setting aspect ratio

10.16.4 Image position

Scan conversion output only

Menu	Top→BITMAP→IMAGE POSITION
Setting for	ALL, OUT01 to OUTn, 1 to 4 (BITMAP)
Setting value	CENTER [Default], BOTTOM-RIGHT, TOP-RIGHT, BOTTOM-LEFT, TOP-LEFT

You can set the image position of the bitmap for each output channel bitmap.
If “A” is selected, all “1” to “4” BITMAP can be set.



[Fig. 10.27] Position

10.16.5 Start-up bitmap output

Scan conversion output only

Menu	Top→BITMAP→START-UP BITMAP
Setting for	ALL, OUT01 to OUTn
Setting value	OFF [Default], 1 to 4 (BITMAP)

You can select the bitmap to be output at startup.
The selected bitmap (“1” to “4”) will be displayed until input video is output.
Unregistered bitmap image cannot be selected.

10.16.6 Memory mode of bitmap file

Scan conversion output only

Menu Top→BITMAP→MEMORY MODE
Setting value 2K (4 BITMAPS) [Default], 4K (1 BITMAP)

You can set the memory mode of bitmap file.
If the memory mode is switched, registered bitmap file is deleted.
Press the “MENU/ENTER” button to apply the setting.

[Table 10.26] Memory mode

		2K (4 BITMAPS)	4K (1 BITMAP)
Supported board	FDX-SOV4HS	Supported	Not supported
	FDX-SOV4TS	Supported	Not supported
	FDX-SOV2UHS	Supported	Supported
Maximum resolution		2048×1152 per bitmap	4096×2160 per bitmap
Number of registered bitmap files		4	1

10.17 Configuring FDX-S

10.17.1 Grouping front panel security lockout

Menu Top→SYSTEM SETTINGS→BUTTON LOCK TARGET
Setting for CHANNEL, MENU, PRESET
Setting value

[Table 10.27] Target buttons of security lockout

Setting for	Target button	Setting value
CHANNEL	“INPUT SELECT” button, “OUTPUT SELECT” button, “I/O channel selection” buttons	LOCK [Default], UNLOCK
MENU	“MENU/ENTER” button, “Navigation” buttons	LOCK [Default], UNLOCK
PRESET	“PRESET LOAD” button	LOCK [Default], UNLOCK

You can set front panel security lockout that prevents accidental changes to the controller settings.
【See: 9.2.4 Front panel security lockout】

10.17.2 Beep

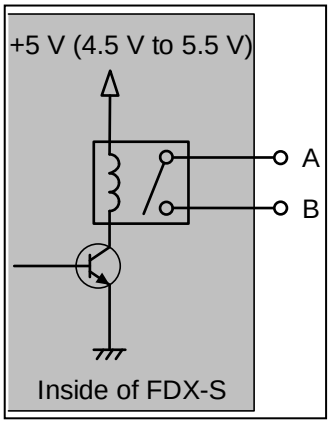
Menu	Top→SYSTEM SETTINGS→BEEP SOUND
Setting value	ON [Default], OFF

You can enable/disable the beep tone function (sounding every time you press a front panel button).

10.17.3 Alarm

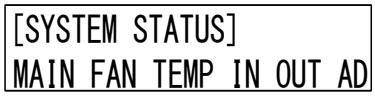
Menu	Top→SYSTEM SETTINGS→ALARM
Setting value	ON : Enabling [Default]
	OFF : Disabling

Rated voltage : DC 24 V
Rated current : 300 mA



[Fig. 10.28] Alarm output

You can enable/disable the alarm function for detecting problems in power supply voltage, cooling fan, internal temperature, board, or audio board.
In case any problem is detected and the front display shows the top page, the alarm information is displayed and the background light flashes. If “OFF” is selected, front display alarm and background flashing are disabled.



[Fig. 10.29] Alarm page

[Table 10.28] Alarm description

Values to be displayed	Description
MAIN	Appears in case an abnormality in the power supply voltage is detected.
FAN	Appears in case an abnormality in the cooling fan is detected.
TEMP	Appears in case an abnormality in internal temperature is detected.
IN	Appears in case an abnormality in an input board is detected.
OUT	Appears in case an abnormality in an output board is detected.
AD	Appears in case an abnormality in an audio board is detected.

Note:
In case an alarm is output, the FDX-S may have problems. Please contact us.

10.17.4 Displaying advanced menu

Menu	Top→SYSTEM SETTINGS→ADVANCED MENU
Setting value	OFF: Displays normal setting menu [Default]
	ON : Displays advanced setting menu

You can switch menu display mode: Normal setting menu or Advanced setting menu.

10.17.5 Power saving

Menu	Top→SYSTEM SETTINGS→POWER SAVE MODE
Setting value	ON [Default], OFF

If you select “ON” and no button function is operated for 10 or 60 seconds, the front display brightness is reduced to approximately 25%. When you operate any button, brightness returns to 100%.
For FDX-S08U/S08 and FDX-S16U/S16, when the power saving mode is activated, the front display menu will return to the top page.

[Table 10.29] Inactivity time

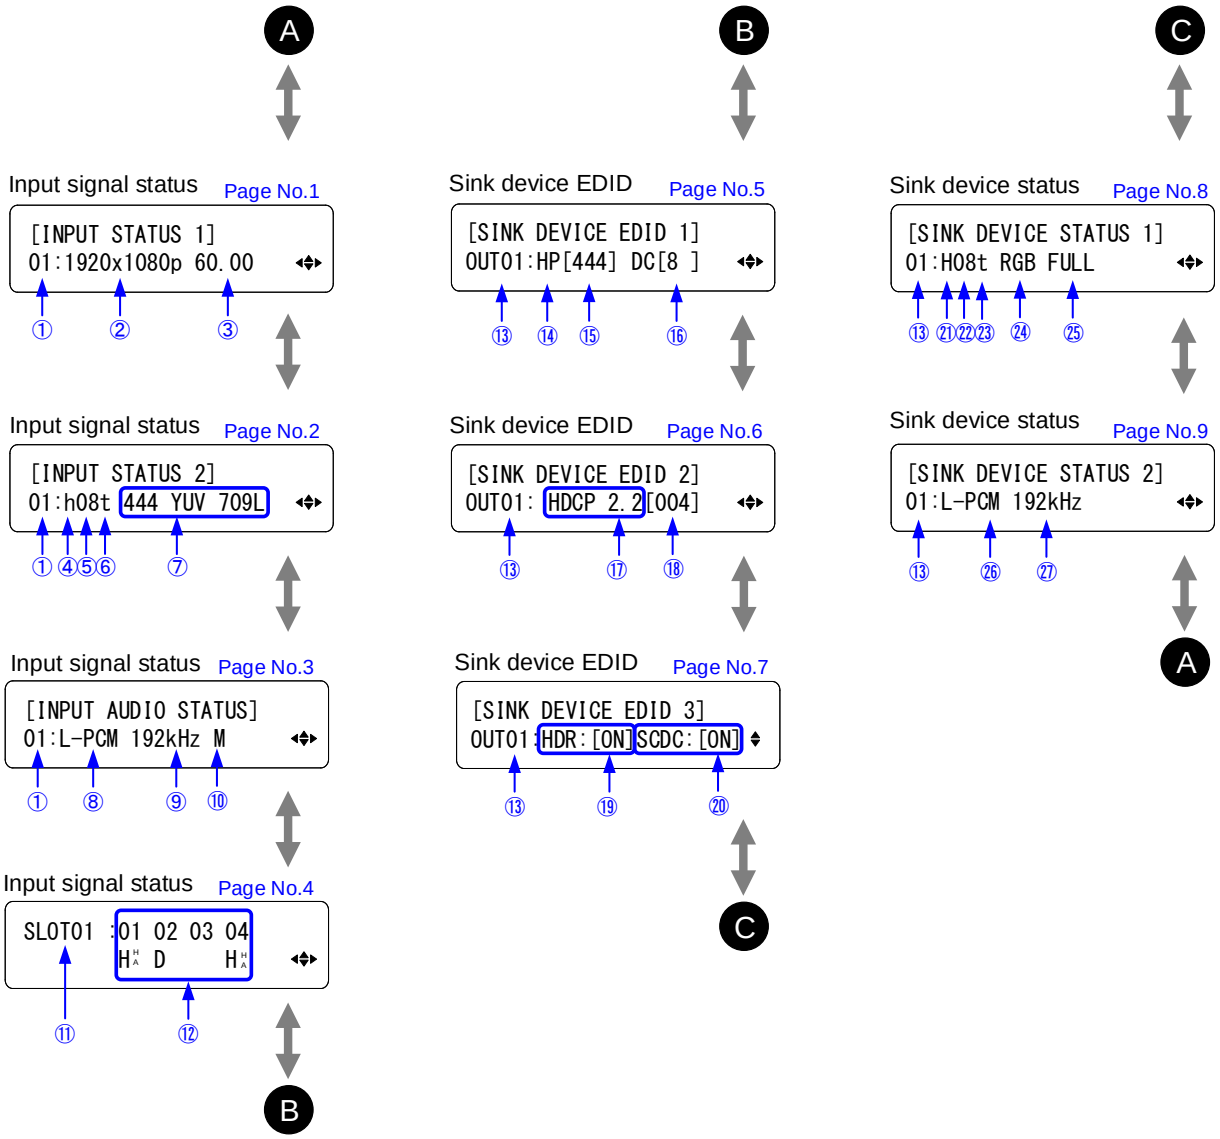
Model	Inactivity time
FDX-S08U, FDX-S08	60 seconds
FDX-S16U, FDX-S16	60 seconds
FDX-S32U, FDX-S32	10 seconds
FDX-S64	10 seconds

10.17.6 Top page

Menu	Top→SYSTEM SETTINGS→TOP PAGE
Setting value	OFF [Default], ON

You can view input signal, sink device EDID, and sink device status using ▲, ▼, ◀, and ▶buttons.

【See: 10.18.1 Input signal status】
【See: 10.18.2 Sink device status】
【See: 10.18.3 Viewing sink device EDID】



[Fig. 10.30] Top page of front display

[Table 10.30] Top page of front display

[1/3]

Page	Number (① to ㉖)	Description
1	① Input channel number	01 to n
	② Input resolution	Example: 1920x1080p (Input signal resolution)
	③ Input vertical synchronous frequency	Example: 60.00 (Input signal vertical synchronous frequency)
	No signal is input.	No Signal
	No input board is installed.	----------
2	④ Input signal	d : DVI signal・without HDCP, D : DVI signal・with HDCP, h : HDMI signal・without HDCP, H : HDMI signal・with HDCP, s : SDI signal
	⑤ Color depth	08 : 24 bit/pixel (8 bit/component) 10 : 30 bit/pixel (10 bit/component) 12 : 36 bit/pixel (12 bit/component)
	⑥ Stream type	T : HDCP 2.2 stream type 1 t : HDCP 2.2 stream type 0 No value: ④ with HDCP, HDCP 1.4
	⑦ Color space (sampling structure, color range, SDI type, SDI sampling structure)	[If HDMI/DVI/HDBaseT input board is installed] Example: RGB LIMITED (Sampling structure and color range are displayed.) [If SDI input board is installed] Example: 422 HD Y422 (Sampling structure, SDI type, SDI sampling structure) Sampling structure RGB : RGB 444 : YCbCr 4:4:4 422 : YCbCr 4:2:2 420 : YCbCr 4:2:0 Color range LIMITED : RGB LIMITED FULL : RGB FULL YUV 601L : YUV 601 LIMITED YUV 601F : YUV 601 FULL YUV 709L : YUV 709 LIMITED YUV 709F : YUV 709 FULL XVYCC 601 : xvYCC 601 XVYCC 709 : xvYCC 709 sYCC 601 : sYCC 601 YCC 601 : Adobe YCC 601 Adobe : Adobe RGB

[2/3]

Page	Number (① to ㉖)	Description
2	⑦ Color space (sampling structure, color range, SDI type, SDI sampling structure)	SDI type SD : SD-SDI HD : HD-SDI 3GA : 3G-SDI Level A 3GB : 3G-SDI Level B 2HD : 3G-SDI Level B DaulHD --- : Not received unk : Unknown SDI sampling structure RGB : RGB 4:4:4 Y444 : YCbCr 4:4:4 Y422 : YCbCr 4:2:2 Y420 : YCbCr 4:2:0 RGBA : RGBA 4:4:4:4 Y444A : YCbCrA 4:4:4:4 Y422A : YCbCrA 4:2:2:4 RGBD : RGBD 4:4:4:4 Y444D : YCbCrD 4:4:4:4 Y422D : YCbCrD 4:2:2:4 XYZ : XYZ 4:4:4 NONE : No payload ID 07,12,13,15 : Unknown
	No signal is input.	No Signal
	No input board is installed.	----------
3	⑧ Input audio signal	L-PCM: LPCM, COMPRESSED AUDIO: Compressed audio
	⑨ Input sampling frequency	Example: 192 kHz (Input signal sampling frequency)
	⑩ Audio channel	M: 2.1ch or higher multi audio, No value: Stereo/Mono
	No signal is input.	No Signal
	No input board is installed.	----------
4	⑪ Input board number	SLOT01 to SLOTm
	⑫ Input status for each board	H : HDMI signal, D : DVI signal, S: SDI signal H : with HDCP, A : Audio is input,
5	⑬ Output channel number	OUT01 to OUTn
	⑭ Audio	HC : HDMI monitor that supports compressed audio HP : HDMI monitor that does not support compressed audio (Only LPCM) D : DVI monitor
	⑮ Color space	RGB : RGB supported 444 : YCbCr 4:4:4 supported 422 : YCbCr 4:2:2 supported --- : Unknown

[3/3]

Page	Number (① to ㉖)	Description
5	⑯ Color depth	8 : 24 bit/pixel (8 bit/component) 10 : 30 bit/pixel (10 bit/component) 12 : 36 bit/pixel (12 bit/component)
	No sink device is connected.	UNCONNECTED
	No output board is installed.	----------
6	⑰ HDCP	HDCP 2.2 : HDCP 2.2 supported, HDCP 1.4 : HDCP 1.4 supported, HDCP OFF: Not supported, ---: Not checked yet
	⑱ HDCP encryption	000 : None, 001 : Being encrypted, 002: Being encrypted, 003 : Being encrypted, 004: Encryption ends normally, 005: Encryption ends abnormally
	No sink device is connected.	UNCONNECTED
	No output board is installed.	----------
7	⑲ HDR	ON: Supported, --: Not supported
	⑳ SCDC	ON: Supported, --: Not supported
	No sink device is connected.	UNCONNECTED
	No output board is installed.	----------
8	㉑ Output signal	d : DVI signal・without HDCP, D : DVI signal・with HDCP, h : HDMI signal・without HDCP, H : HDMI signal・with HDCP
	㉒ Color depth	08 : 24 bit/pixel (8 bit/component) 10 : 30 bit/pixel (10 bit/component) 12 : 36 bit/pixel (12 bit/component)
	㉓ Stream type	T : HDCP 2.2 stream type 1 t : HDCP 2.2 stream type 0 No value: ㉑ with HDCP, HDCP 1.4
	㉔ Color space	RGB : RGB output 444 : YCbCr 4:4:4 output 422 : YCbCr 4:2:2 output 420 : YCbCr 4:2:0 output
	㉕ Color range	FULL : Full range output, LIMITED : Limited range output
	No sink device is connected or no output board is installed.	----------
9	㉖ Output audio signal	L-PCM : LPCM COMPRESSED AUDIO : Compressed audio
	㉗ Output sampling frequency	Example: 192 kHz (Output signal sampling frequency)
	No sink device is connected or no output board is installed.	----------

10.17.7 Channel selection mode

FDX-S08U/S08
FDX-S16U/S16 only

Menu	Top→SYSTEM SETTINGS→SELECT MODE
Setting value	INPUT→OUTPUT [Default], OUTPUT→INPUT

You can set the switching method.

【See: 9.2.2 Selecting output video】

10.18 Status indication

10.18.1 Input signal status

Menu	Top→VIEW STATUS→INPUT STATUS

You can view the input signal status.

【See: 10.17.6 Top page】

10.18.2 Sink device status

Menu	Top→VIEW STATUS→SINK DEVICE STATUS

You can view the output signal status of sink device connected to video output connectors.

【See: 10.17.6 Top page】

10.18.3 Viewing sink device EDID

Menu	Top→VIEW STATUS→SINK DEVICE EDID

You can display the EDID information of the sink device that is connected to each video output connector.

【See: 10.17.6 Top page】

10.18.4 System status

Menu Top→VIEW STATUS→SYSTEM STATUS

You can view the power supply voltage, fans, internal temperature, board status, and audio board.

No abnormality is detected　　Abnormality in fan is detected

[Fig. 10.31] System status

[Table 10.31] System error

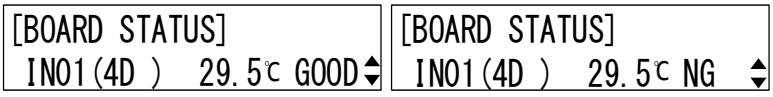
Displayed value	Description
MAIN	Appears in case an abnormality in the power supply voltage is detected.
FAN	Appears in case an abnormality in the cooling fan is detected.
TEMP	Appears in case an abnormality in internal temperature is detected.
IN	Appears in case an abnormality in an input board is detected.
OUT	Appears in case an abnormality in an output board is detected.
AD	Appears in case an abnormality in an audio board is detected.

Note:
In case an alarm is output, the FDX-S may have problems. Please contact us.

10.18.5 Viewing board status

Menu Top→VIEW STATUS→BOARD STATUS

You can view the installed board types, temperature, and board status.
Temperature of audio board is not displayed.
“OK” means normal, and “NG” means abnormal.



No abnormality is detected in board　　Abnormality is detected in board

[Fig. 10.32] Board status

[Table 10.32] Board status displayed in front display

P/N	Input/ Output	Description	Value to be displayed
FDX-SIV4H	Input	4K@30HDMI/DVI	2D
FDX-SOV4H	Output		
FDX-SIV4T	Input	4K@30 HDBaseT	2T
FDX-SOV4T	Output		
FDX-SIV4UH	Input	4K@60 HDMI/DVI	4D
FDX-SOV4UH	Output		
FDX-SIV4UT	Input	4K@60 HDBaseT	4T
FDX-SOV4UT	Output		
FDX-SIV4S	Input	3G-SDI/HD-SDI/SD-SDI	2S
FDX-SOV4HS	Output	1080p HDMI/DVI scan converter	2DS
FDX-SOV4TS	Output	1080p HDBaseT scan converter	2TS
FDX-SOV2UHS	Output	4K@60 HDMI/DVI scan converter	4DS

[Table 10.33] Audio board status

Model Slot		Normal	Abnormal
FDX-S08U, FDX-S08 FDX-S16U, FDX-S16 FDX-S32U, FDX-S32			FDX-S64	OPTION A			OPTION B		
[Table 10.34] Audio board status displayed in front display

P/N	Input/ Output	Description	Value to be displayed
FDX-SAB4A	Input	4-input analog audio	4A
	Output	4-output analog audio	
FDX-SOA12A	Output	12-output analog audio	12A
FDX-SAB64D	Input	1-input network audio 64 Dante channels	64D
	Output	1-input network audio 64 Dante channels	

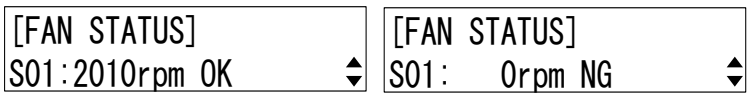
Note:

In case an abnormality is displayed, the FDX-S may have problems. Please contact us.

10.18.6 Fan status

Menu Top→VIEW STATUS→FAN STATUS

You can view fan rotation speed and fan status.
“OK” means normal, and “NG” means abnormal.



No abnormality is detected in fan　　Abnormality is detected in fan

[Fig. 10.33] Fan status

Notes:
In case the fan stops, power off the FDX-S immediately and contact us. Otherwise, the internal temperature rises, and it may cause fire, problem or electrical shock.

10.18.7 Power supply voltage status

Menu Top→VIEW STATUS→POWER STATUS

You can view the power supply voltage status.
“OK” means normal, and “NG” means abnormal.

[Table 10.35] Power supply voltage status

P/N	Normal	Abnormal
FDX-S08U, FDX-S08 FDX-S16U, FDX-S16 FDX-S32U, FDX-S32	[POWER STATUS] OK	[POWER STATUS] NG
FDX-S64	[POWER STATUS] 1A:OK 1B:OK	[POWER STATUS] 1A:NG 1B:OK

Note:
In case an abnormality is displayed, the FDX-S may have problems. Please contact us.

10.18.8 Device information

Menu Top→VIEW STATUS→VERSION

You can view the firmware version.

11 Product specification

11.1 FDX-S08U

Item		Description
Input board		2 slots (Up to 8 inputs)
Output board		2 slots (Up to 8 outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@60 (4:4:4)
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 10 Watts
	Dimensions	16.9 (W) × 3.5 (H) × 15.7 (D)" (430 (W) × 88 (H) × 400 (D) mm) (2U high) (Excluding connectors and the like)
	Weight	20.5 lbs. (9.3 kg) (With redundant power supply: 21.4 lbs. (9.7 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4UH	4 inputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SIV4UT	4 inputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4UH	4 outputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SOV4UT	4 outputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SOV2UHS	2 outputs 4K@60 HDCP 2.2 HDMI/DVI scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP08	Redundant power unit with two independent power connectors

11.2 FDX-S08

Item		Description
Input board		2 slots (Up to 8 inputs)
Output board		2 slots (Up to 8 outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@30
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 10 Watts
	Dimensions	16.9 (W) × 3.5 (H) × 15.7 (D)" (430 (W) × 88 (H) × 400 (D) mm) (2U high) (Excluding connectors and the like)
	Weight	20.5 lbs. (9.3 kg) (With redundant power supply: 21.4 lbs. (9.7 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
	FDX-SIV4UH	4 inputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SIV4UT	4 inputs 4K@60 HDCP 2.2 HDBaseT
Output board	FDX-SOV4H	4 outputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SOV4T	4 outputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SOV4HS	4 outputs 1080p HDCP 1.4 HDMI/DVI scan converter
	FDX-SOV4TS	4 outputs 1080p HDCP 1.4 HDBaseT scan converter
	FDX-SOV4UH	4 outputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SOV4UT	4 outputs 4K@60 HDCP 2.2 HDBaseT

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP08	Redundant power unit with two independent power connectors

11.3 FDX-S16U

Item		Description
Input board		4 slots (Up to 16 inputs)
Output board		4 slots (Up to 16 outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@60 (4:4:4)
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 20 Watts
	Dimensions	16.9 (W) × 5.2 (H) × 15.7 (D)" (430 (W) × 132 (H) × 400 (D) mm) (3U high) (Excluding connectors and the like)
	Weight	26.9 lbs. (12.2 kg) (With redundant power supply: 28.9 lbs. (13.1 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4UH	4 inputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SIV4UT	4 inputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4UH	4 outputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SOV4UT	4 outputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SOV2UHS	2 outputs 4K@60 HDCP 2.2 HDMI/DVI scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP16	Redundant power unit with two independent power connectors

11.4 FDX-S16

Item		Description
Input board		4 slots (Up to 16 inputs)
Output board		4 slots (Up to 16 outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@30
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 20 Watts
	Dimensions	16.9 (W) × 5.2 (H) × 15.7 (D)" (430 (W) × 132 (H) × 400 (D) mm) (3U high) (Excluding connectors and the like)
	Weight	26.9 lbs. (12.2 kg) (With redundant power supply: 28.9 lbs. (13.1 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4H	4 outputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SOV4T	4 outputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SOV4HS	4 outputs 1080p HDCP 1.4 HDMI/DVI scan converter
	FDX-SOV4TS	4 outputs 1080p HDCP 1.4 HDBaseT scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP16	Redundant power unit with two independent power connectors

11.5 FDX-S32U

Item		Description
Input board		8 slots (Up to 32 inputs)
Output board		8 slots (Up to 32outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@60 (4:4:4)
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 42 Watts
	Dimensions	16.9 (W) × 8.7 (H) × 15.7 (D)" (430 (W) × 221 (H) × 400 (D) mm) (5U high) (Excluding connectors and the like)
	Weight	32.8 lbs. (14.9 kg) (With redundant power supply: 35.9 lbs. (16.3 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4UH	4 inputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SIV4UT	4 inputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4UH	4 outputs 4K@60 HDCP 2.2 HDMI/DVI
	FDX-SOV4UT	4 outputs 4K@60 HDCP 2.2 HDBaseT
	FDX-SOV2UHS	2 outputs 4K@60 HDCP 2.2 HDMI/DVI scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP32	Redundant power unit with two independent power connectors

11.6 FDX-S32

Item		Description
Input board		8 slots (Up to 32 inputs)
Output board		8 slots (Up to 32 outputs)
Audio board		1 slot (Up to 32 stereo channels)
Transmission signal	Video	Up to 4K@30
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 40 Watts
	Dimensions	16.9 (W) × 8.7 (H) × 15.7 (D)" (430 (W) × 221 (H) × 400 (D) mm) (5U high) (Excluding connectors and the like)
	Weight	32.8 lbs. (14.9 kg) (With redundant power supply: 35.9 lbs. (16.3 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4H	4 outputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SOV4T	4 outputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SOV4HS	4 outputs 1080p HDCP 1.4 HDMI/DVI scan converter
	FDX-SOV4TS	4 outputs 1080p HDCP 1.4 HDBaseT scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP32	Redundant power unit with two independent power connectors

11.7 FDX-S64

Item		Description
Input board		16 slots (Up to 64 inputs)
Output board		16 slots (Up to 64 outputs)
Audio board		2 slots (Up to 64 stereo channels)
Transmission signal	Video	Up to 4K@30
	Audio	Multi-channel LPCM up to 8 channels
	Control	Up to 38.4 kbps of RS-232C, Up to 100Base-TX of LAN
Instant Alert output		1 port/captive screw (2-pin) Non-voltage contact input up to DC 24 V 300 mA Monitoring power supply voltage, fans, internal temperature, board, and audio board status
Control	RS-232C	1 port/captive screw (3-pin), full duplex, up to 38.4 kbps
	LAN	1 port/RJ-45 10Base-T/100Base-TX (Auto Negotiation), Auto MDI/MDI-X
Functions		I/O board, audio board, CPU board, fan unit, and power unit can be replaced without removing from rack, Preset memory (32 settings), Last memory, Button security lockout, System check, WEB browser control, Status notification, HDBaseT status display
General	Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz
	Power consumption	About 82 Watts
	Dimensions	16.9 (W) × 17.4 (H) × 15.7 (D)" (430 (W) × 443 (H) × 400 (D) mm) (10U high) (Excluding connectors and the like)
	Weight	56.4 lbs. (25.6 kg) (With redundant power supply: 64.8 lbs. (29.4 kg))
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

■ I/O boards

Item	Parts Number	Description
Input board	FDX-SIV4H	4 inputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SIV4T	4 inputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SIV4S	4 inputs 3G-SDI/HD-SDI/SD-SDI
Output board	FDX-SOV4H	4 outputs 4K@30 HDCP 1.4 HDMI/DVI
	FDX-SOV4T	4 outputs 4K@30 HDCP 1.4 HDBaseT
	FDX-SOV4HS	4 outputs 1080p HDCP 1.4 HDMI/DVI scan converter
	FDX-SOV4TS	4 outputs 1080p HDCP 1.4 HDBaseT scan converter

■ Audio board

Item	Parts Number	Description
Audio board	FDX-SAB4A	4 inputs Unbalanced 4 outputs Balanced/Unbalanced
	FDX-SOA12A	12 outputs Unbalanced
	FDX-SAB64D	1 input/output 64 Dante protocol channels (32 stereo channels)

■ Redundant power supply unit

Item	Parts Number	Description
Redundant power supply unit	FDX-SRP64	Redundant power unit with two independent power connectors

11.8 FDX-SIV4UH

Item		Description
Input		4 inputs
Video	HDMI/DVI	HDMI/DVI 1.0 TMDS single link, HDCP 1.4/2.2 TMDS clock: 25 MHz to 300 MHz, TMDS data rate: 0.75 Gbps to 18 Gbps 36 bit Deep Color, x.v.Color, 3D (*1), HDR (*2) For 4K@50/59.94/60 RGB/YCbCr 4:4:4, 24 bit is supported. ARC/HEC/CEC are not supported. EDID emulation
	Format	VGA to 4K (Dot clock: 25 MHz to 600 MHz) 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz/50 Hz (4:4:4)/60 Hz (4:4:4) are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. input level: 0 dBFS
Connector		Female HDMI Type A (19-pin)
Maximum transmission distances		98 ft. (30 m) (1080p@60), 39 ft. (12 m) (4K@60) (*3)
General	Power consumption	About 14 Watts
	Weight	0.7 lbs. (0.3 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 3D is supported if external EDID is selected while a 3D-supported sink device is connected for EDID setting or if copied EDID of 3D-supported sink device is selected for EDID setting.
*2 HDR is supported if external EDID is selected while an HDR-supported sink device is connected for EDID setting or if copied EDID of an HDR-supported sink device is selected for EDID setting.
*3 The maximum cable distance varies depending on the connected devices and was measured under following conditions:
・1080p@60: When IDK's 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was input.
・4K@60 : When IDK's 18 Gbps supported cable was used and signals of 4K@60 24 bit/pixel (8 bit/component) was input.
The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.

11.9 FDX-SIV4UT

Item		Description
Input		4 inputs
Video	HDBaseT	HDBaseT HDCP 1.4/2.2 36 bit Deep Color, x.v.Color, 3D (*1), HDR (*2) For WQHD, WQXGA, and 4K formats, 24 bit is supported. ARC/HEC/CEC are not supported. EDID emulation, RS-232C/LAN
	Format	VGA to 4K (Dot clock: 25 MHz to 600 MHz) For WQHD/WQXGA, only Reduced Blanking is supported. 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz/50 Hz (4:2:0)/60 Hz (4:2:0) are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. input level: 0 dBFS
Connector		RJ-45 (*3)
Cable		CAT.5E HDC, Cat5e UTP/STP, Cat6 UTP/STP (T568A/T568B straight-through)
Maximum transmission distances		328 ft. (100 m), 492 ft. (150 m) (Long reach mode is used) (*4)
General	Power consumption	About 31 Watts
	Weight	1.1 lbs. (0.5 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 3D is supported if external EDID is selected while a 3D-supported sink device is connected for EDID setting or if copied EDID of 3D-supported sink device is selected for EDID setting.
*2 HDR is supported if external EDID is selected while an HDR-supported sink device is connected for EDID setting or if copied EDID of an HDR-supported sink device is selected for EDID setting.
*3 RJ-45 (HDBaseT connector) is only for extending digital video and audio signals over a Cat5e/Cat6 cable. Use it with IDK's HDBaseT Products. Do not use for LAN devices.
*4 The maximum transmission distance was obtained when IDK's CAT.5E HDC cable was used. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
The maximum transmission distance is the shorter distance of connected HDBaseT product or sink device's maximum transmission distance.
Up to 492 ft. (150 m): 1080p (24 bit) in Long reach mode. For Long reach mode, use IDK's HDBaseT Products that supports 328 ft. (100 m) or longer.

11.10 FDX-SIV4H

Item		Description
Input		4 inputs
Video	HDMI/DVI	HDMI/DVI 1.0 TMDS single link, HDCP 1.4 TMDS clock: 25 MHz to 300 MHz, TMDS data rate: 0.75 Gbps to 9 Gbps 36 bit Deep Color For WQHD, WQXGA, and 4K formats, 24 bit is supported. x.v.Color/3D/HDR/ARC/HEC/CEC are not supported. EDID emulation
	Format	VGA to 4K (Dot clock: 25 MHz to 300 MHz) For WQHD/WQXGA, only Reduced Blanking is supported. 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. input level: 0 dBFS
Connector		Female HDMI Type A (19-pin)
Maximum transmission distances		98 ft. (30 m) (1080p@60), 66 ft. (20 m) (4K@30) (*1)
General	Power consumption	About 11 Watts
	Weight	0.7 lbs. (0.3 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 The maximum cable distance varies depending on the connected devices and was measured under following conditions:
・1080p@60: When IDK's 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was input.
・4K@30 : When IDK's 24 AWG cable was used and signals of 4K@30 24 bit/pixel (8 bit/component) was input.
The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.

11.11 FDX-SIV4T

Item		Description
Input		4 inputs
Video	HDBaseT	HDBaseT HDCP 1.4 36 bit Deep Color For WQHD, WQXGA, and 4K formats, 24 bit is supported. x.v.Color/3D/HDR/ARC/HEC/CEC are not supported. EDID emulation, RS-232C/LAN
	Format	VGA to 4K (Dot clock: 25 MHz to 300 MHz) For WQHD/WQXGA, only Reduced Blanking is supported. 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. input level: 0 dBFS
Connector		RJ-45 (*1)
Cable		CAT.5E HDC, Cat5e UTP/STP, Cat6 UTP/STP (T568A/T568B straight-through)
Maximum transmission distances		328 ft. (100 m), 492 ft. (150 m) (Long reach mode is used) (*2)
General	Power consumption	About 30 Watts
	Weight	1.1 lbs. (0.5 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 RJ-45 (HDBaseT connector) is only for extending digital video and audio signals over a Cat5e/Cat6 cable. Use it with IDK's HDBaseT Products. Do not use for LAN devices.
*2 The maximum transmission distance was obtained when IDK's CAT.5E HDC cable was used. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
The maximum transmission distance is the shorter distance of connected HDBaseT product or sink device's maximum transmission distance.
Up to 492 ft. (150 m): 1080p (24 bit) in Long reach mode. For Long reach mode, use IDK's HDBaseT Products that supports 328 ft. (100 m) or longer.

11.12 FDX-SIV4S

Item		Description
Input		4 inputs (With loop-through output) Note: When the FDX-S is powered on, SDI input signals are output from SDI loop-through output connectors.
Video	SDI	3G-SDI/HD-SDI/SD-SDI NRZI/NRZ, 0.8 V[p-p]/75 Ω SMPTE 424M (3G-SDI)/SMPTE 292M (HD-SDI)/SMPTE 259M-C (SD-SDI)
	Format	480i / 576i / 720p / 1080i / 1080p 3G-SDI signals: Level A and Level B 720p: 23.98 Hz and 24 Hz are not supported.
Audio	Digital	LPCM up to 8 channels (Selecting 2 groups of audio groups1 to 4) Sampling frequency: 48 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. input level: 0 dBFS
Connector		BNC
Cable		75 Ω coaxial cable for high frequency signal
Maximum transmission distances		With 1505A (BELDEN RG-59), SD-SDI: 1083 ft. (330 m)/HD-SDI: 656 ft. (200 m)/3G-SDI: 394 ft. (120 m) With 1694A (BELDEN RG-6), SD-SDI: 1312 ft. (400 m)/HD-SDI: 787 ft. (240 m)/3G-SDI: 459 ft. (140 m) * The maximum distances may be shorten depending on the quality of cable. Please make sure that the cable is long enough.
Function		3G-SDI/HD-SDI/SD-SDI input
General	Power consumption	About 30 Watts
	Weight	0.9 lbs. (0.4 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.13 FDX-SOV4UH

Item		Description
Output		4 outputs
Video	HDMI/DVI	HDMI/DVI 1.0 TMDS single link, HDCP 1.4/2.2 TMDS clock: 25 MHz to 300 MHz, TMDS data rate: 0.75 Gbps to 18 Gbps 36 bit Deep Color, x.v.Color, 3D, HDR For 4K@50/59.94/60 RGB/YCbCr 4:4:4, 24 bit is supported. ARC/HEC/CEC are not supported.
	Format	VGA to 4K (Dot clock: 25 MHz to 600 MHz) 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz/50 Hz (4:4:4)/60 Hz (4:4:4) are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. output level: 0 dBFS
Connector		Female HDMI Type A (19-pin)
Maximum transmission distances		98 ft. (30 m) (1080p@60), 39 ft. (12 m) (4K@60) (*1)
Functions		Anti-snow, Connection Reset (*2)
General	Power consumption	About 11 Watts
	Weight	0.7 lbs. (0.3 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 The maximum cable distance varies depending on the connected devices and was measured under following conditions:
・1080p@60: When IDK's 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was output.
・4K@60 : When IDK's 18 Gbps supported cable was used and signals of 4K@60 24 bit/pixel (8 bit/component) was output.
The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.

*2 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the FDX-S's output. If other devices are connected between the FDX-S's output and sink device, this feature may be invalid.

11.14 FDX-SOV4UT

Item		Description
Output		4 outputs
Video	HDBaseT	HDBaseT HDCP 1.4/2.2 36 bit Deep Color, x.v.Color, 3D, HDR For WQHD, WQXGA, and 4K formats, 24 bit is supported. ARC/HEC/CEC are not supported. RS-232C/LAN
	Format	VGA to 4K (Dot clock: 25 MHz to 600 MHz) For WQHD/WQXGA, only Reduced Blanking is supported. 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz/50 Hz (4:2:0)/60 Hz (4:2:0) are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. output level: 0 dBFS
Connector		RJ-45 (*1)
Cable		CAT.5E HDC, Cat5e UTP/STP, Cat6 UTP/STP (T568A/T568B straight-through)
Maximum transmission distances		328 ft. (100 m), 492 ft. (150 m) (Long reach mode is used) (*2)
Functions		Anti-snow, Connection Reset (*3)
General	Power consumption	About 18 Watts
	Weight	1.1 lbs. (0.5 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 RJ-45 (HDBaseT connector) is only for extending digital video and audio signals over a Cat5e/Cat6 cable. Use it with IDK's HDBaseT Products. Do not use for LAN devices.
*2 The maximum transmission distance was obtained when IDK's CAT.5E HDC cable was used. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
The maximum transmission distance is the shorter distance of connected HDBaseT product or sink device's maximum transmission distance.
Up to 492 ft. (150 m): 1080p (24 bit) in Long reach mode. For Long reach mode, use IDK's HDBaseT Products that supports 328 ft. (100 m) or longer.
*3 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the FDX-S's output. If other devices are connected between the FDX-S's output and sink device, this feature may be invalid.

11.15 FDX-SOV4H

Item		Description
Output		4 outputs
Video	HDMI/DVI	HDMI/DVI 1.0 TMDS single link, HDCP 1.4 TMDS clock: 25 MHz to 300 MHz, TMDS data rata: 0.75 Gbps to 9 Gbps 36 bit Deep Color For WQHD, WQXGA, and 4K formats, 24 bit is supported. x.v.Color/3D/HDR/ARC/HEC/CEC are not supported.
	Format	VGA to 4K (Dot clock: 25 MHz to 300 MHz) For WQHD/WQXGA, only Reduced Blanking is supported. 480i / 480p / 576i / 576p / 720p / 1080i / 1080p / 4K For 4K formats, 24 Hz/25 Hz/30 Hz are supported.
Audio	Digital	Multi-channel LPCM up to 8 channels Sampling frequency: 32 kHz to 192 kHz, Sample size: 16 bit to 24 bit Reference level: -20 dBFS, Max. output level: 0 dBFS
Connector		Female HDMI Type A (19-pin)
Maximum transmission distances		98 ft. (30 m) (1080p@60), 66 ft. (20 m) (4K@30) (*1)
Functions		Anti-snow, Connection Reset (*2)
General	Power consumption	About 9 Watts
	Weight	1.1 lbs. (0.5 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 The maximum cable distance varies depending on the connected devices and was measured under following conditions:
・1080p@60: When IDK's 24 AWG cable was used and signals of 1080p@60 24 bit/pixel (8 bit/component) was output.
・4K@30 : When IDK's 24 AWG cable was used and signals of 4K@30 24 bit/pixel (8 bit/component) was output.
The maximum cable distance depends on the connected devices. The distance may not be extended with some device combinations, cabling method, or other manufacturer's cable. Video may be disturbed or may not be output even if signals are within the range mentioned above.
*2 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the FDX-S's output. If other devices are connected between the FDX-S's output and sink device, this feature may be invalid.

Item		Description
Input	Analog audio	4 inputs Unbalanced Stereo LR Input impedance: 24 kΩ Reference level: -10dBu, Max. input level: +10dBu
Output	Analog audio	4 outputs Balanced/Unbalanced Stereo LR Output impedance: 100 Ω balanced/50 Ω unbalanced Reference level: -10dBu, Max. output level: +10dBu
Connector		Input : 4 captive screw (3-pin) Output : 4 captive screw (5-pin)
Function		Lip Sync (Max. 256 ms.)
General	Power consumption	About 9 Watts
	Weight	1.3 lbs. (0.6 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.21 FDX-SOA12A

Item		Description
Output	Analog audio	12 outputs Unbalanced Stereo LR Output impedance: 50 Ω Reference level: -10dBu, Max. output level: +10dBu
Connector		Captive screw (3-pin)
Function		Lip Sync (Max. 256 ms.)
General	Power consumption	About 18 Watts
	Weight	1.3 lbs. (0.6 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.22 FDX-SAB64D

Item		Description
Input	Dante network audio	1 input Format: Dante protocol Sampling frequency: 48 kHz, Sample size: 24 bit Maximum audio input channel: 64 channels (32 stereo audio channels)
Output	Dante network audio	1 output Format: Dante protocol Sampling frequency: 48 kHz, Sample size: 24 bit Maximum audio output channel: 64 channels (32 stereo audio channels)
Connector		2 RJ-45 (Primary/Secondary) (*1)
General	Power consumption	About 11 Watts
	Weight	1.3 lbs. (0.6 kg)
	Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
	Humidity	Operating/Storage: 20% to 90% (Non Condensing)

*1 These RJ-45 connectors are only for Dante format.

11.23 FDX-SRP08

Item	Description
Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz, 2 power connectors
Weight	4 lbs. (1.8 kg)
Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.24 FDX-SRP16

Item	Description
Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz, 2 power connectors
Weight	6 lbs. (2.7 kg)
Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.25 FDX-SRP32

Item	Description
Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz, 2 power connectors
Weight	10.6 lbs. (4.8 kg)
Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
Humidity	Operating/Storage: 20% to 90% (Non Condensing)

11.26 FDX-SRP64

Item	Description
Power	100 - 240 VAC ±10%, 50 Hz/60 Hz ±3 Hz, 2 power connectors
Weight	23.4 lbs. (10.6 kg)
Temperature	Operating : 32°F to 104°F (0°C to +40°C) Storage : -4°F to +176°F (-20°C to +80°C)
Humidity	Operating/Storage: 20% to 90% (Non Condensing)

12 Troubleshooting

This chapter provides recommendations in case difficulties are encountered during FDX-S setup and operation.

In case the FDX-S does not work correctly, please check the following items first.

- Are the FDX-S and all devices connected to power and powered on?
- Are signal cables connected correctly?
- Are there any loose or partially mated connections?
- Are the interconnecting cables specified correctly to support adequate bandwidth?
- For 4K format, is an 18 Gbps high-speed cable used?
- Are specifications of connected devices matched to each other?
- Are configuration settings for the connected devices correct?
- Is there any nearby equipment that may cause electrical noise/RF interference?

If the problem persists, review the following section for guidelines and recommendations. Refer to the manuals of connected devices as well, since they may possibly be the cause of the problem.

Problem	Cause/Check item/Solution	Page
● Video output		
Video is not being output.	[1] If output board other than scan converter output board is installed, check if the EDID resolution setting of this device is set to the input resolution supported by the sink device? If a scan converter output board is installed, check if the output resolution supported by the sink device is set. ・ Vertical sync frequency: For TV output resolutions (480i to 4K), video of 59.94 Hz or 60Hz may not be output. ・ PC output resolutions (VGA to 4K) may not be output to LCD TVs and plasma TVs.	104 73
	[2] Are signals output from the source device? If the input resolution is displayed in “INPUT STATUS 1”, check [3] to [8]; if “No Signal” is displayed, check [9] to [11].	124
	[3] Check the presence of HDCP. Check if the input signal is protected by HDCP in “INPUT STATUS 2”. H, D : Signal protected by HDCP 1.4. h, d, s : The signal is not protected. If signal is protected by HDCP, check HDCP and stream types as well. T : HDCP 2.2 stream type 1 t : HDCP 2.2 stream type 2 No value : HDCP 1.4	124

Problem	Cause/Check item/Solution		Page
● Video output (Cont'd)			
Video is not being output.	[4]	Check if the sink device support HDCP in "SINK DEVICE EDID 2". If it does not match the result of [3], video may not be displayed. Check the every sink device connector. [OFF] or [- - -]: Sink device's resolution may not be supported. Check the specification of the sink device. Some HDMI/DVI devices check if the connected device is HDCP compliant and determines whether to output HDCP signal or not. Since the FDX-S is HDCP compliant, the FDX-S may not output video if connected to a sink device that does not support HDCP. In such a case, disable the HDCP input from the source device.	124 92
	[5]	If output board other than scan converter output board is installed, check if the resolution supported by the sink device is input? Check the resolution and video frequency in "[INPUT STATUS 1". If a scan converter output board is installed, check if the output resolution supported by the sink device is set. Sink device's resolution may not be supported. Check the specification of the sink device.	128 73
	[6]	For 4K format, does the sink device support SCDC? Check if the sink device supports SCDC in "[SINK DEVICE EDID 3]". ・ ON : SCDC supported. ・ -- : SCDC is not supported; vide is not displayed.	128
	[7]	Change the setting of Hot plug ignoring duration.	89
	[8]	If a long cable is connected for input or output when 4K@30/60 HDMI/DVI digital I/O board is installed, replace it with a 16 ft. (5 m) or shorter cable. Even though a 16 ft. (5 m) or longer cable can be connected for digital I/O of the FDX-S, HDCP authorization or EDID acquisition may fail depending on the cable quality and the connected device.	26
	[9]	The time setting for monitoring no-signal input may be too short.	91
	[10]	Check the video output setting of the source device.	―
	[11]	If Long reach mode is set to enabled, only up to 1080p (24 bit) or 148 MHz can be transmitted.	87 93

Problem	Cause/Check item/Solution	Page
● Video output (Cont'd)		
Video is intermittent, or presents noise.	If a long cable is connected for input or output when 4K@30/60 HDMI/DVI digital I/O board is installed, replace it with a 16 ft. (5 m) or shorter cable. Since the FDX-S has automatic cable length equalization, long cables can be successfully used, but the FDX-S 's full performance may not be realized if the cable or connected peripheral devices are of inferior quality. If the error is solved by replacing the cable, the signal may have been degraded due to excessive attenuation or crosstalk. IDK offers high-quality cables and extenders. Please contact us as needed.	—
	When high-speed signals (high resolution: such as 4K; DEEP COLOR signal) are input or output, video may not be displayed or noise may appear. This is largely dependent on cable quality and the characteristics of connected peripheral devices. If the problem occurs in all inputs, it is related to the input side of the system. If the problem occurs only in a specific output connector, it is being caused by difficulties ahead of that output. One possible solution is to change to a lower resolution format and/or set Deep Color to "24 Bit". You can check the resolution and color depth of the input signal in input signal status and you can also limit resolution and color depth of input signal as defined by the FDX-S's EDID configuration settings. If an 1080p HDMI/DVI scan converter output board is installed, try other output equalizer settings.	73 87 104 108 85
	Is a cable appropriated for the transmission when 4K@30/60 HDBaseT I/O board is installed? If the transmission distance is 164 ft. (50 m) or longer, we recommend using a Cat6 cable whose noise characteristic and frequency characteristic and using STP cable instead of UTP cable to reduce the influence of interference and external noise. If the transmission distance is 164 ft. (50 m) or shorter, you can use a Cat5e cable.	38
	When an 4K@30/60 HDBaseT I/O board is installed, connect cables correctly (place them straight) to reduce the influence of noise. Keep the distance among cables and not to place cables closely in parallel.	38
Deep Color signal is not output.	Does the sink device support Deep Color? If not, video is output at 24 bit/pixel (8 bit/component) even if Deep Color signal is input.	87 108
Video flickers	If an interlace signal is input to a sink device that does not support interlace inputs, the video may flicker. Check the format settings for the FDX-S's output port driving the sink device.	—

Problem	Cause/Check item/Solution	Page
● Video output (Cont'd)		
The left, right, top and bottom sides are cut off.	Some sink devices overscan input video, and the video may be cut out. Check the display setting of the sink device. If a scan converter output board is installed, check image position and image size settings.	—
Video is reduced vertically or horizontally.	Some sink devices display input video with full screen mode, and the aspect ratio cannot be kept. Check the display setting of the sink device. With some resolutions, full-screen display cannot be avoided. If output board other than scan converter output board is installed, change the output resolution of the source device. If a scan converter output board is installed, check the output resolution setting.	—
Black is displayed at top, bottom, right and left on PC video or only part of the PC video is displayed, and the rest can be revealed by scrolling with the mouse.	If the PC has the Panel Fit function, select [Scale Full Screen]. If the resolution that is set for the PC and the resolution that is actually output from the PC are not matched, those problems may occur. Check the resolution of the PC and the EDID resolution setting.	104
PC's dual monitor cannot be set or the setting is canceled.	If the monitoring function for no-signal input is enabled, the dual monitor function of your PC may not work correctly. In this case, disable the monitoring function.	91
Video is displayed in purple or green.	Some sink devices do not find the color space of the input video correctly, and the video may be displayed in purple or green. Set the correct color space in the output mode to solve this problem.	86
Brightness is improper.	If a scan converter output board is installed, you can adjust the output and input brightness settings.	96 97
	Is HDR signal used? If HDR-non-supported sink device tries to receive HDR signal, the video is displayed with improper brightness. Check if the sink device supports HDR in [SINK DEVICE EDID 3]. Some I/O boards do not support HDR. If the source device determines HDR with EDID and outputs HDR signal, check the EDID setting of the FDX-S.	124 143 to 146 103

Problem	Cause/Check item/Solution	Page
● Audio output		
Audio is not being output.	Is audio embedded to input signal? Check input audio signal, sampling frequency, and other settings in [INPUT AUDIO STATUS]. Also, check embedded audio settings.	124 100
	Ensure that audio output is turned on.	99
	If there are multiple output connectors in the source device, check the audio output setting of the source device.	―
	Ensure that the input audio format is supported by the connected sink device. Typically, LCD monitors may not output 88.2 kHz or higher sampling frequency of LPCM and compressed audio (such as Dolby Digital, DTS, and other format). In order to play a Blu-ray disc having compressed audio, check the audio output setting of the source device. The source device's audio signal characteristics can be managed by the HDC's EDID configuration settings.	108 to 110
	Ensure that DVI signal is not being output from the source device.	128
	Ensure that the output mode is not set to DVI output.	86
	If the EDID of the connected sink device cannot be obtained for some reason, the FDX-S cannot determine the sink type. As a result, audio may not be output. In such case, set "**10.5.9 Sink device EDID check**" to "ALWAYS1" or "ALWAYS2".	124 88
Even though multi-channel audio is played, only 2-channel audio is output	For multi-channel, change the EDID setting which is set to 2-channel audio by default. If the problem still cannot be solved, check if multi-channel audio is output from the source device again.	111
Audio that does not match output video.	Check if embedded audio is set to audio board input audio? If so, change the setting.	100
Audio is not output from audio board.	If compressed audio (Dolby Digital, DTS, and the like) is input, analog audio or Dante is not output. You can check the input audio type in input signal status.	101 124
Audio with incorrect setting is output from audio board.	Video output channel is selected to embedded audio, check the embedded audio setting. Note that digital audio of selected video input channel is output. (Audio that is embedded to video output signal is not output from the audio board.)	100 101
	For Dante output, check the setting of DanteController. Note that channel number which is displayed on DanteController does not match the Dante I/O number of the FDX-S menu.	62
Compressed audio (such as Dolby Digital, DTS) is not output from the source device.	Compressed audio input is set to OFF (EDID settings) by factory default. If using compressed audio, change the EDID setting.	108 to 110
	Check the audio output settings of the source device.	―

Problem	Cause/Check item/Solution	Page
● Button operation		
Buttons do not operate.	Ensure that buttons are not locked.	53
	When the FDX-S is powered on, it takes about 15 seconds to start up. During the start-up process, all buttons are disabled.	―
● Communication command control		
Control commands cannot be issued from PC to the FDX-S.	Are the following items set correctly? For RS-232C : Baud rate and data word length For LAN: IP address and subnet mask	112 to 113
	When the FDX-S is powered on, it takes about 15 seconds to start up. During the start-up process, communication command control is disabled.	―
● WEB browser control		
WEB browser cannot be issued from PC to the FDX-S.	Is the connection setting of the TCP port valid for the web browser?	113
	Immediately after the FDX-S is powered on, control from the WEB browser cannot be received.	45
	Ensure that the WEB browser JavaScript is effective.	―

If additional assistance is required, please perform the following tests and then contact us.

No.	Checking items	Result
1	The problem occurs at all connectors?	Yes or No
2	Connect the devices using genuine cables without connecting the FDX-S. The problem still cannot be solved? Please contact us for assistance.	Yes or No
